

# YieldMax™ Launches the Magnificent 7 Fund of Funds ETF (YMAG)

CHICAGO, MILWAUKEE and NEW YORK, January 30, 2024 (GLOBE NEWSWIRE) – YieldMax™ announced the launch today of the [YieldMax™ Magnificent 7 Fund of Option Income ETFs \(NYSE Arca: YMAG\)](#).

## YMAG Overview

**YMAG** is a “fund of funds” ETF that seeks to deliver current income to investors. As a “fund of funds” ETF, YMAG’s portfolio will be primarily composed of seven select YieldMax™ ETFs (the “**Underlying YieldMax™ ETFs**”). YMAG’s name refers to its strategy of gaining exposure to the common stocks of seven companies\*, which together are commonly referred to as the “**Magnificent 7**”.

\* *Apple Inc. (AAPL), Amazon.com, Inc. (AMZN), Alphabet Inc. (GOOGL), Meta Platforms, Inc. (FBY), Microsoft Corporation (MSFT), NVIDIA Corporation (NVDA) and Tesla, Inc. (TSLA).*

## YMAG Portfolio Construction

The seven Underlying YieldMax™ ETFs held by YMAG are equally weighted and their weights are reallocated on a monthly basis.

## Why Invest in YMAG?

- YMAG seeks to generate current monthly income, primarily through investments in the seven Underlying YieldMax™ ETFs.
- Each Underlying YieldMax™ ETF employs a synthetic covered call strategy that seeks to generate income from option premiums and provide indirect exposure to a specific company’s share price returns, with a cap on potential gains.
- YMAG’s portfolio of Underlying YieldMax™ ETFs is designed to broaden access and simplify ownership for shareholders, providing them with indirect exposure to the Magnificent 7, in a single ETF.

## Current YMAG Portfolio

The table below provides the distribution and yield information for the seven Underlying YieldMax™ ETFs held by YMAG.

ETF Ticker <sup>1</sup>	ETF Name	Reference Asset	Distribution Rate <sup>2,4</sup>	30-Day SEC Yield <sup>3</sup>
<b>TSLY</b>	YieldMax™ TSLA Option Income Strategy ETF	TSLA	74.80%	3.90%
<b>APLY</b>	YieldMax™ AAPL Option Income Strategy ETF	AAPL	35.63%	3.78%
<b>NVDY</b>	YieldMax™ NVDA Option Income Strategy ETF	NVDA	30.07%	3.95%
<b>AMZY</b>	YieldMax™ AMZN Option Income Strategy ETF	AMZN	20.39%	3.84%

ETF Ticker <sup>1</sup>	ETF Name	Reference Asset	Distribution Rate <sup>2,4</sup>	30-Day SEC Yield <sup>3</sup>
<b>FBY</b>	YieldMax™ META Option Income Strategy ETF	META	53.04%	3.69%
<b>GOOY</b>	YieldMax™ GOOGL Option Income Strategy ETF	GOOGL	14.54%	4.12%
<b>MSFO</b>	YieldMax™ MSFT Option Income Strategy ETF	MSFT	26.51%	3.69%

<sup>1</sup> All YieldMax™ ETFs shown in the table above have a gross expense ratio of 0.99%.

<sup>2</sup> The Distribution Rate shown is as of close on January 29, 2024. The Distribution Rate is the annual yield an investor would receive if the most recently declared distribution, **which includes option income**, remained the same going forward. The Distribution Rate is calculated by multiplying such distribution by twelve (12), and dividing the resulting amount by the ETF's most recent NAV. The Distribution Rate represents a single distribution from the ETF and does not represent its total return. Distributions may also include a combination of ordinary dividends, capital gain, and return of investor capital, which may decrease an ETF's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment. These Distribution Rates may be caused by unusually favorable market conditions and may not be sustainable. Such conditions may not continue to exist and there should be no expectation that this performance may be repeated in the future.

<sup>3</sup> The 30-Day SEC Yield represents net investment income, **which excludes option income**, earned by such ETF over the 30-Day period ended December 31, 2023, expressed as an annual percentage rate based on such ETF's share price at the end of the 30-Day period.

<sup>4</sup> Each ETF's strategy will cap potential gains if its reference asset's shares increase in value, yet subjects an investor to all potential losses if the reference asset's shares decrease in value. Such potential losses may not be offset by income received by the ETF.

### **About ZEGA Financial**

Founded in 2011, ZEGA Financial is a SEC-registered investment adviser and investment manager that specializes in derivatives. The firm leverages technology, data, experience, and proprietary strategies to craft products and services for advisors and individual investors. ZEGA Financial helps investors successfully navigate volatile and uncertain markets through innovative hedging strategies. The firm's founding principles grew out of the bestselling book co-authored by Jay Pestrighelli, ZEGA's CEO and Co-Founder, entitled "Buy and Hedge, the Five Iron Rules for Investing Over the Long Term." His book highlights how to bridge the complicated nature of options investing with the needs of the everyday investor.

### **Risk Information**

Before investing you should carefully consider the Fund's investment objectives, risks, charges and expenses. This and other information are in the prospectus. Please read the prospectuses carefully before you invest.

### **Risk Disclosures**

Investing involves risk. Principal loss is possible. THE FUND, TRUST, ADVISER, AND SUB-ADVISED ARE NOT AFFILIATED WITH ANY UNDERLYING ISSUER. **Underlying Security Risk.** Each Underlying YieldMax™ ETF invests in options contracts that are based on the value of its Underlying Security. This subjects each Underlying YieldMax™ ETF to certain of the same risks as if it owned shares of its Underlying Security, even though it does not. As a result, each Underlying YieldMax™ ETF is subject to the risks associated with the industry of the corresponding Underlying Issuer. **Derivatives Risk.** Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. Each Underlying YieldMax™ ETF's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or Underlying YieldMax™ ETF's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The Underlying YieldMax™ ETFs investment strategies are options-based. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international policies, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. **Distribution Risk.** Each Underlying YieldMax™ ETF aims to provide monthly income, although there's no guarantee of distribution in any given month, and the distribution amounts may vary significantly. Monthly distributions may consist of capital returns, reducing each Underlying YieldMax™ ETF's NAV and trading price over time, thus potentially leading to significant losses for investors (including the Fund), especially as an Underlying YieldMax™ ETF's returns exclude any dividends paid by the Underlying Security, which may result in lesser income compared to a direct investment in the Underlying Security. **NAV Erosion Risk Due to Distributions.** When an Underlying YieldMax™ ETF makes a distribution, its NAV typically drops by the distribution amount on the related ex-dividend date. The repetitive payment of distributions may significantly erode an Underlying YieldMax™ ETF's NAV and trading price over time, potentially resulting in notable losses for investors (including the Fund). **Call Writing Strategy Risk.** The continuous application of each Underlying YieldMax™ ETF's call writing strategy impacts its ability to participate in the positive price returns of its Underlying Security, which in turn affects each Underlying YieldMax™ ETF's returns both during the term of the sold call options and over longer time frames. An Underlying YieldMax™ ETF's participation in its Underlying Security's positive price returns and its own returns will depend not only on the Underlying Security's price but also on the path the Underlying Security's price takes over time, illustrating that certain price trajectories of the Underlying Security could lead to suboptimal outcomes for the

Underlying YieldMax™ ETF. **Single Issuer Risk.** Each Underlying YieldMax™ ETF, focusing on an individual security (Underlying Security), may experience more volatility compared to traditional pooled investments or the market generally due to issuer-specific attributes. Its performance may deviate from that of diversified investments or the overall market, making it potentially more susceptible to the specific performance and risks associated with the Underlying Security. **High Portfolio Turnover Risk.** Each Underlying YieldMax™ ETF may actively and frequently trade all or a significant portion of the Underlying YieldMax™ ETF's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Underlying YieldMax™ ETF's expenses. **New Fund Risk.** The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

YieldMax™ ETFs are distributed by Foreside Fund Services, LLC. Foreside is not affiliated with Tidal Financial Group, YieldMax™ ETFs or ZEGA Financial.
