TABLE OF CONTENTS

SUMMARY INFORMATION

YieldMax™ Short TSLA Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income. The Fund's secondary investment objective is to seek inverse (opposite) exposure to the share price of the common stock of Tesla, Inc. ("TSLA"), subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses[(1)] (expenses that you pay each year as a percentage of the value of your investment)	
Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses[(2)]	0.00%
Total Annual Fund Operating Expenses	0.99%

(1) The Fund's adviser will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), and litigation expenses, and other non-routine or extraordinary expenses.

(2) Based on estimated amounts for the current fiscal year.

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest $10,000 in the Fund for the time periods indicated and then redeem or hold all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	**3 Years**
$101	$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect *inverse* exposure to the share price (*i.e.*, the price returns) of the common stock of Tesla, Inc. ("TSLA"). The Fund's potential for gains from **decreases** in the share price of TSLA's stock (the "Underlying Security") is limited. If the share price of the Underlying Security significantly decreases, the Fund will not fully benefit from the inverse of those decreases. The Fund will employ its investment strategy as it relates to the Underlying Security regardless of whether there are periods of strong market, economic, or other conditions and will not take temporary defensive positions during such periods.

As further described below, the Fund uses a synthetic covered put strategy to provide income and indirect *inverse* exposure to the share price returns of the Underlying Security, subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. That is, the Fund not only seeks to generate income from its options investments but also aims to derive additional gains when the share price of the Underlying Security **decreases**. The Fund's options contracts provide:

- indirect inverse exposure to the share price returns of the Underlying Security,

- current income from the option premiums, and
- a limit on the Fund's participation in gains, if any, arising from **decreases** in the share price of the Underlying Security.

For more information, see sections "The Fund's Use of Option Contracts" and "Synthetic Covered Put Strategy" below.

The Fund's investment adviser is Tidal Investments LLC ("Tidal" or the "Adviser") and the investment sub-adviser is ZEGA Financial, LLC ("ZEGA" or the "Sub-Adviser").

Why invest in the Fund?

- The Fund seeks to benefit when the share price of the Underlying Security decreases. The Fund's potential corresponding benefit from decreases in the share price of the Underlying Security is limited.
- The Fund seeks to generate monthly income, which is not dependent on the price depreciation of the Underlying Security.
- The Fund seeks to manage potential losses (i.e., cap losses if the share price of the Underlying Security experiences significant gains) by purchasing out-of-the-money call options (further described below).

Although the Fund may not fully benefit from decreases in the Underlying Security's share price, the Fund's portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security. Further, an Investment in the Fund differs from "short selling" or "shorting" the Underlying Security.

- The Fund's strategy will cap its potential gains if the Underlying Security shares decrease in value.
- The Fund's strategy is subject to potential losses if the Underlying Security shares increase in value, which may not be offset by income received by the Fund or by the purchase of out-of-the-money call options (further described below).
- The Fund does not invest directly in the Underlying Security.
- The Fund does not directly short the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund's Use of Option Contracts

As part of the Fund's synthetic covered put strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLexible EXchange® ("FLEX") call and put option contracts that are based on the share price of the Underlying Security. The Fund will initially use only European FLEX options, but may also use options that are exercisable at any time (i.e. American style options contracts).

See the "Additional Information About the Fund" section for an overview of put and call option terminology.

Synthetic Covered Put Strategy Overview

In seeking to achieve its investment objective, the Fund will implement a "*synthetic* covered put" strategy using the standardized exchange-traded and FLEX options. The Fund uses a synthetic put strategy rather than a traditional one, utilizing Treasuries as collateral to potentially achieve higher returns than those of the Underlying Security.

- A *traditional* covered put strategy is an investment strategy where an investor (the Fund) sells a put option on an Underlying Security it is short.

- A *synthetic* covered put strategy is similar to a traditional covered put strategy in that the investor sells a put option that is based on the value of the Underlying Security. However, in a synthetic covered put strategy, the investor (the Fund) does not actually short the Underlying Security, but rather seeks to synthetically replicate a short position in the Underlying Security (i.e., it seeks inverse exposure to the share price movements of the Underlying Security) through the use of various investment instruments.

The Fund's synthetic covered put strategy consists of the following four elements, each of which is described in greater detail below:

- Synthetic short exposure to the Underlying Security, which allows the Fund to seek to participate, on an inverse basis, in changes, up or down, to the price of the Underlying Security's shares.

- Covered put writing (where the Underlying Security put options are sold against the synthetic short portion of the strategy), which allows the Fund to generate income.

- U.S. Treasuries, which are used for collateral for the options, and which also generate income.
- Out-of-the money ("OTM") call options, which are purchased to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value.

However, this loss capping works only if the Underlying Security's share price rises to or above the strike price of the OTM call options that were purchased. If the share price increases but stays below the strike price of these options, the Fund will incur losses proportionate to this price increase.

Synthetic Covered Put Strategy

1. Synthetic Short Exposure

To achieve a synthetic short exposure to the Underlying Security, the Fund will write (sell) the Underlying Security call options and, simultaneously, go long (buy) the Underlying Security put options to try to replicate inverse exposure to the share price movements of the Underlying Security. The put options purchased by the Fund and the call options sold by the Fund will generally have three-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The Fund uses the proceeds from selling call options to help pay for the purchased put options. The combination of the long put options and sold call options provides the Fund with investment exposure equal to approximately -100% of the Underlying Security's share price changes for the duration of the applicable options exposure (i.e., the synthetic short position is expected to gain value when the share price of the Underlying Security decreases and to lose value when the share price of the Underlying Security increases).

2. Covered Put Writing

As part of its strategy, the Fund will write (sell) put option contracts on the Underlying Security to generate income. The put options written (sold) by the Fund will generally have an expiration of one month or less (the "Put Period") and a strike price that is approximately 0%-15% below the then-current Underlying Security's share price at the time of such sales.

It is important to note that the sale of the Underlying Security put option contracts will limit the Fund's participation in decreases in the Underlying Security's share price. If the share price of the Underlying Security decreases, the above-referenced synthetic short exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's share price decreases beyond the strike price of one or more of the sold (short) put option contracts, the Fund will lose money on those short put positions, and the losses will, in turn, limit the gains of the Fund's synthetic short exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic short exposure to the Underlying Security and the sold (short) Underlying Security put positions) will limit the Fund's participation in decreases in the Underlying Security's share price beyond a certain point.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered put strategy.

4. OTM Call Purchasing

The Fund purchases out-of-the-money (OTM) calls to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value.

OTM call options are a type of options contract where the strike price is set higher than the current market price of the underlying asset, referred to here as the Underlying Security. When the Fund buys these OTM call options, it is essentially setting a fixed price level. This level acts as a cap on the Fund's potential losses that might arise from its indirect inverse exposure to the share price of the Underlying Security. **However, this loss capping works only if the Underlying Security's share price rises to or above the strike price of the OTM call options that were purchased. If the share price increases but stays below the strike price of these options, the Fund will incur losses proportionate to this price increase.**

For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund's losses will be capped at approximately 70%.

The Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund's value and/or any income otherwise generated by the Fund's investment strategy.

The Fund intends to maintain its synthetic covered put strategy through the use of options contracts. As the options contracts it holds are traded, exercised or expire, it may enter into new options contracts, a practice referred to as “rolling.” The Fund’s practice of rolling options may result in high portfolio turnover.

Fund’s Monthly Distributions

The Fund will seek to provide monthly income in the form of distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) put option contracts on the Underlying Security, as described above. The income, in the form of option premiums received from such option sales, will be primarily influenced by the volatility of the Underlying Security shares, although other factors, including interest rates, will also impact the level of income.

- Investing in short-term U.S. Treasury securities. The income generated by such securities will be influenced by interest rates at the time of investment.

The Fund’s income from writing (selling) put option contracts on the Underlying Security will be partially offset (reduced) by the premiums paid for purchasing OTM call options, which are purchased to seek to manage (cap) the Fund’s potential losses from the Fund’s short exposure to the Underlying Security if it appreciates significantly in value.

Fund Portfolio

The Fund’s principal holdings are described below:

YieldMax™ Short TSLA Option Income Strategy ETF – Principal Holdings			
Portfolio Holdings (All options are based on the value of the Underlying Security)	**Investment Terms**	**Expected Target Maturity**	**Primary Purpose of Holding**
Purchased put option contracts	“at-the-money” (*i.e.,* the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide exposure to negative price returns of the Underlying Security. If the share price of the Underlying Security decreases, these options will generate corresponding increases to the Fund.	3-month to 6-month expiration dates	Combined with the sold call options, creates a synthetic short position on the Underlying Security.
Sold call option contracts	“at-the-money” (*i.e.,* the strike price is equal to the then-current share price of the Underlying Security at the time of sale). They are sold to help pay for the purchased put options described above. However, the sold call option contracts provide exposure to the full extent of any share price increases experienced by the Underlying Security.	3-month to 6-month expiration dates	Combined with the purchased put options, creates a synthetic short position on the Underlying Security.
Sold (short) put option contracts	The strike price is approximately 0%-15% below the then-current share price of the Underlying Security at the time of sale. They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced.	1-month or less expiration dates	Generate income for the Fund in the form of premiums, in return for capping the returns of the Fund’s synthetic short position.

U.S Treasury Securities and Cash	Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government. These instruments are used as collateral for the Fund’s derivative investments. They will also generate income.	6-month to 2-year maturities	Collateral for the options positions and some additional income.
Purchased call option contracts	“out-of-the-money” (i.e., the strike price is above the then-current share price of the Underlying Security at the time of purchase). They limit the Fund’s potential losses if the share price of the Underlying Security experiences significant gains. They represent a cost (debit) that will partially offset (reduce) the net premium received from the sale of the put options.	1-month to 6-month expiration dates	Limit the maximum loss of the Fund’s synthetic short position.

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund’s net assets and the market value of the options package is expected to be between 0% and 50% of the Fund’s net assets. The combination of these investment instruments provides indirect inverse investment exposure to the share price of Underlying Security equal to at least 100% of the Fund’s total assets.

The Fund is classified as “non-diversified” under the 1940 Act.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Tesla, Inc.

Tesla, Inc. is an operating company that designs develops, manufactures, leases and sells high performance fully electric vehicles, solar energy generation systems and energy storage products. Tesla, Inc. operates two segments: (i) automotive and (ii) energy generation and storage. The automotive segment includes the design, development, manufacturing, sales and leasing of electric vehicles as well as sales of automotive regulatory credits. The energy generation and storage segment includes the design, manufacture, installation, sales and leasing of solar energy generation and energy storage products and related services and sales of solar energy systems incentives. Tesla, Inc. is listed on Nasdaq. The aggregate market value of voting stock held by non-affiliates of Tesla, Inc., as of June 30, 2023, was approximately $722.5 billion (based on the closing price for shares of Tesla, Inc.’s common stock as reported by Nasdaq on June 30, 2023).

Tesla, Inc. is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the SEC by Tesla, Inc. pursuant to the Exchange Act can be located by reference to the SEC file number 001-34756 through the SEC’s website at www.sec.gov. In addition, information regarding Tesla, Inc. may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the Underlying Security or other securities of Tesla, Inc. The Fund has derived all disclosures contained in this document regarding Tesla, Inc. from the publicly available documents. In connection with the offering of the securities, none of the Fund, the Trust, the Adviser, the Sub-Adviser, or their respective affiliates has participated in the preparation of such documents or made any due diligence inquiry with respect to Tesla, Inc. None of the Fund, the Trust, the Adviser, the Sub-Adviser, or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding Tesla, Inc. is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of Tesla, Inc. (and therefore the price of Tesla, Inc. at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning Tesla, Inc. could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser, the Sub-Adviser, or their respective affiliates makes any representation to you as to the performance of the Underlying Security.

THE FUND, TRUST, ADVISER, AND SUB-ADVISER ARE NOT AFFILIATED WITH TESLA, INC.

Due to the Fund's investment strategy, the Fund's economic exposure is inversely related to the industry assigned to TSLA. As of the date of the Prospectus, TSLA is assigned to the auto manufacturing industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

TSLA Price Appreciation Risk. As part of the Fund's synthetic covered put strategy, the Fund purchases and sells call and put option contracts that are based on the share price of TSLA common stock (the "Underlying Security"). This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund's indirect inverse exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security's share price **increases**. **If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses.** The Fund may also be subject to the following risks:

Indirect Investment in TSLA Risk. Tesla, Inc. is not affiliated with the Trust, the Fund, the Adviser, the Sub-Adviser, or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of Tesla, Inc. but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be adversely impacted by increases in the share price of the Underlying Security.

Underlying Security Trading Risk. The trading price of the Underlying Security may become less volatile over time, which could have an adverse impact on the Fund's performance. The Fund's synthetic covered put strategy is designed to benefit from significant price fluctuations in the Underlying Security. However, if the Underlying Security experiences reduced volatility, it may lead to a decrease in the Fund's potential returns.

Historically, the Underlying Security's shares have exhibited substantial price swings, but there is a possibility that market conditions, investor sentiment, or other factors may contribute to decreased volatility in the future. Such reduced volatility could limit the opportunities for the Fund to profit from its credit spread positions, as the strategy relies on price differentials between options with varying strike prices.

It's important to note that the Fund's performance is closely tied to the dynamics of the Underlying Security's share price. As such, any significant reduction in the volatility of the Underlying Security's share price may present challenges for the Fund's synthetic covered put strategy and may affect its ability to achieve its investment objectives. Investors should consider this potential risk when evaluating their investment in the Fund.

TSLA Good Performance Risk. Tesla, Inc. may meet or exceed its publicly announced expectations or guidelines regarding its business, which could potentially lead to a rise in the share price of the Underlying Security. Tesla, Inc. regularly provides guidance concerning its anticipated financial and business performance, including sales and production projections, future revenues, gross margins, profitability, and cash flows. However, forecasting future events and identifying key factors affecting business conditions inherently involves uncertainty. Tesla, Inc.'s guidance may ultimately prove accurate or may prove underestimated, as it relies on assumptions such as global and local economic conditions, anticipated production and sales volumes, average sales prices, supplier and commodity costs, and planned cost reductions. If Tesla, Inc.'s guidance is accurate or varies positively from actual results, TSLA's share price could increase significantly and, as a result, the Fund may suffer significant losses.

Increased Electric Vehicle Consumer Adoption Risk. Tesla may experience substantial growth if consumer demand for electric vehicles continues to expand. Deviations from expected market developments, be it accelerated growth, shifts in demand, or heightened electric vehicle adoption, could present advantageous conditions for Tesla, Inc.'s business. These conditions might bolster its market position, enhance overall prospects, strengthen financial stability, and improve operational performance. Despite having fewer resources and production capabilities compared to established competitors with traditional internal combustion engine offerings, Tesla, Inc. appears poised to benefit from the expanding electric vehicle sector. As electric vehicles currently constitute a smaller fraction of the overall vehicle market, Tesla, Inc. appears well-positioned to capitalize on factors such as shifting consumer preferences, increased competition from alternative fuel vehicles, and supportive government policies and incentives. Furthermore, Tesla, Inc. competes in a dynamic demographic landscape where innovation and differentiation play key roles. In a sector marked by cyclical sales patterns, Tesla, Inc. has the potential to navigate these trends adeptly, seizing opportunities during market upswings and maintaining resilience during downturns, ultimately contributing to its long-term success, all of which could significantly increase the share price of TSLA's common stock. As a result, the Fund may suffer significant losses.

Inverse Auto Manufacturers Industry Risk. The automotive industry may present continued opportunities for Tesla, Inc.'s business operations. This sector is known for its cyclicality, but Tesla, Inc. may be able to leverage its innovative approaches to minimize the impact of periodic operating losses. Labor disputes, fluctuations in component prices, and supplier disruptions, often encountered by traditional automakers, may be less pronounced for Tesla, Inc. due to its unique production and supply chain strategies. Tesla's investments in cutting-edge automotive technologies, such as autonomous vehicles, may indeed require substantial capital, but they hold the potential for long-term profitability. Additionally, Tesla, Inc.'s nimble approach allows it to respond swiftly to government policies and regulations, potentially aligning its strategies with favorable incentives. While many established automotive manufacturers are diversified, Tesla, Inc.'s focused product line and growing customer base may enable it to effectively navigate industry dynamics and capitalize on factors that can drive its sustained success, all of which could significantly increase the share price of TSLA's common stock. As a result, the Fund may suffer significant losses.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the Underlying Security and the Fund's portfolio of derivatives, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund, in particular, the value of the options contracts in which it invests are substantially influenced by the value of TSLA. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly moves with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in values options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain its synthetic covered put strategy through the use of options contracts, as the options contracts it holds are traded, exercised or expire, it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults, the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of put option contracts, which limits the degree to which the Fund will benefit from decreases in value experienced by TSLA over the Put Period. This means that if TSLA experiences a decrease in value below the strike price of the sold put options during a Put Period, the Fund will likely not experience that increase to the same extent and any Fund gains may significantly differ from the level of TSLA losses over the Put Period. Additionally, because the Fund is limited in the degree to which it will participate in decreases in value experienced by TSLA over each Put Period, but has significant negative exposure to any increases in value experienced by TSLA over the Put Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the inverse of the performance of TSLA. The Fund's ability to benefit from TSLA losses will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold put option contracts and will vary from Put Period to Put Period. The value of the options contracts is affected by changes in the value and dividend rates of TSLA, changes in interest rates, changes in the actual or perceived volatility of TSLA and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of TSLA changes and time moves towards the expiration of each Put Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly inversely correlate on a day-to-day basis with the returns of TSLA. The amount of time remaining until the options contract's expiration date affects the impact that the value of the options contracts have on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the TSLA will result in changes to the Fund's NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than the inverse of the changes experienced by TSLA.

Purchased OTM Call Options Risk. The Fund's strategy is subject to potential losses if the Underlying Security shares increase in value, which may not be offset by the purchase of out-of-the-money (OTM) call options. The Fund purchases OTM calls to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value. However, the OTM call options will cap the Fund's losses only to the extent that the share price of the Underlying Security increases to a price that is at or above the strike price of the purchased OTM call options. Any increase in the share price of the Underlying Security to a price that is below the strike price of the purchased OTM call options will result in a corresponding loss for the Fund. For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund's losses will be capped at approximately 70%. Notwithstanding the foregoing, if the OTM call options have a strike price that is approximately 100% above the then-current share price of the Underlying Security at the time of the call option purchase, and the share price of the Underlying Security increases by at least 100% during the term of the purchased OTM call options, the Fund will lose all its value. Lastly, the Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund's value and/or any income otherwise generated by the Fund's investment strategy.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, the monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Put Writing Strategy Risk. The path dependency (*i.e.*, the continued use) of the Fund's put writing (selling) strategy will impact the extent that the Fund participates in the price decreases of TSLA and, in turn, the Fund's returns, both during the term of the sold put options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money put options having a one-month term, the Fund's participation in the negative price returns of TSLA will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (*i.e.*, 5 months x 7%) of any negative price returns of TSLA, or the Fund may even lose money, even if the TSLA share price has decreased by at least that much over such period, if during any month over that period TSLA's share price decreased by less than 7%. This example illustrates that both the Fund's participation in the negative price returns of TSLA and its returns will depend not only on the price of TSLA but also on the path that TSLA takes over time.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. This risk may be greater for the Fund as it seeks to have exposure to a single reference security as opposed to a more diverse portfolio like a traditional pooled investment. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at a market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that reference a single security, such as TSLA's common stock, being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. These costs, in turn, could decrease the value of the Fund or of its distributions, if any. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from realizing gains or achieving a high correlation with the inverse of TSLA. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund, Adviser, and Sub-Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Recent Market Events Risk. U.S. and international markets have experienced significant periods of volatility in recent years and months due to a number of economic, political and global macro factors including the impact of COVID-19 as a global pandemic, which has resulted in a public health crisis, disruptions to business operations and supply chains, stress on the global healthcare system, growth concerns in the U.S. and overseas, staffing shortages and the inability to meet consumer demand, and widespread concern and uncertainty. The global recovery from COVID-19 is proceeding at slower than expected rates due to the emergence of variant strains and may last for an extended period of time. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (TSLA), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of TSLA and a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC serves as investment adviser to the Fund.

Investment Sub-Adviser: ZEGA Financial, LLC serves as the investment sub-adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Mick Brokaw, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Jay Pestrichelli, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Michael Venuto, Chief Investment Officer for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (Aps) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

When available, information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

SUMMARY INFORMATION

YieldMax™ Short Innovation Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income. The Fund's secondary investment objective is to seek inverse (opposite) exposure to the share price of the ARK Innovation ETF ("ARKK"), subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses(1) (expenses that you pay each year as a percentage of the value of your investment)	
Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses(2)	0.00%
Total Annual Fund Operating Expenses	0.99%

(1) The Fund's adviser will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), and litigation expenses, and other non-routine or extraordinary expenses.

(2) Based on estimated amounts for the current fiscal year.

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest $10,000 in the Fund for the time periods indicated and then redeem or hold all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	**3 Years**
$101	$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect *inverse* exposure to the share price (*i.e.*, the price returns) of the ARK Innovation ETF ("ARKK"). The Fund's potential for gains from **decreases** in the share price of ARKK's shares (the "Underlying Security") is limited. If the share price of the Underlying Security significantly decreases, the Fund will not fully benefit from the inverse of those decreases. The Fund will employ its investment strategy as it relates to the Underlying Security regardless of whether there are periods of strong market, economic, or other conditions and will not take temporary defensive positions during such periods.

As further described below, the Fund uses a synthetic covered put strategy to provide income and indirect *inverse* exposure to the share price returns of the Underlying Security, subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. That is, the Fund not only seeks to generate income from its options investments but also aims to derive additional gains when the share price of the Underlying Security **decreases**. The Fund's options contracts provide:

- indirect inverse exposure to the share price returns of the Underlying Security,
- current income from the option premiums, and

- a limit on the Fund's participation in gains, if any, arising from **decreases** in the share price of the Underlying Security.

For more information, see sections "The Fund's Use of Option Contracts" and "Synthetic Covered Put Strategy" below.

The Fund's investment adviser is Tidal Investments LLC ("Tidal" or the "Adviser") and the investment sub-adviser is ZEGA Financial, LLC ("ZEGA" or the "Sub-Adviser").

Why invest in the Fund?

- The Fund seeks to benefit when the share price of the Underlying Security decreases. The Fund's potential corresponding benefit from decreases in the share price of the Underlying Security is limited.
- The Fund seeks to generate monthly income, which is not dependent on the price depreciation of the Underlying Security.
- The Fund seeks to manage potential losses (i.e., cap losses if the share price of the Underlying Security experiences significant gains) by purchasing out-of-the-money call options (further described below).

Although the Fund may not fully benefit from decreases in the Underlying Security's share price, the Fund's portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security. Further, an Investment in the Fund differs from "short selling" or "shorting" the Underlying Security.

- The Fund's strategy will cap its potential gains if the Underlying Security shares decrease in value.
- The Fund's strategy is subject to potential losses if the Underlying Security shares increase in value, which may not be offset by income received by the Fund or by the purchase of out-of-the-money call options (further described below).
- The Fund does not invest directly in the Underlying Security (nor companies held by ARKK).
- The Fund does not directly short the Underlying Security (nor companies held by ARKK).
- Fund shareholders are not entitled to any Underlying Security dividends or to any dividends paid by companies held by ARKK).

Additional information regarding the Underlying Security is also set forth below.

<u>The Fund's Use of Option Contracts</u>

As part of the Fund's synthetic covered put strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLexible EXchange® ("FLEX") call and put option contracts that are based on the share price of the Underlying Security. The Fund will initially use only European FLEX options, but may also use options that are exercisable at any time (i.e. American style options contracts).

See the "Additional Information About the Fund" section for an overview of put and call option terminology.

<u>Synthetic Covered Put Strategy Overview</u>

In seeking to achieve its investment objective, the Fund will implement a "*synthetic* covered put" strategy using the standardized exchange-traded and FLEX options. The Fund uses a synthetic put strategy rather than a traditional one, utilizing Treasuries as collateral to potentially achieve higher returns than those of the Underlying Security.

- A *traditional* covered put strategy is an investment strategy where an investor (the Fund) sells a put option <u>on an Underlying Security it is short</u>.

- A *synthetic* covered put strategy is similar to a traditional covered put strategy in that the investor sells a put option that is based on the value of the Underlying Security. However, in a synthetic covered put strategy, the investor (the Fund) does not actually short the Underlying Security, but rather seeks to <u>synthetically replicate a short position in the Underlying Security</u> (i.e., it seeks inverse exposure to the share price movements of the Underlying Security) through the use of various investment instruments.

The Fund's synthetic covered put strategy consists of the following four elements, each of which is described in greater detail below:

- Synthetic short exposure to the Underlying Security, which allows the Fund to seek to participate, on an inverse basis, in changes, up or down, to the price of the Underlying Security's shares.

- Covered put writing (where the Underlying Security put options are sold against the synthetic short portion of the strategy), which allows the Fund to generate income.

- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

● Out-of-the money ("OTM") call options, which are purchased to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value

However, this loss capping works only if the Underlying Security's share price rises to or above the strike price of the OTM call options that were purchased. If the share price increases but stays below the strike price of these options, the Fund will incur losses proportionate to this price increase.

Synthetic Covered Put Strategy

1. Synthetic Short Exposure

To achieve a synthetic short exposure to the Underlying Security, the Fund will write (sell) the Underlying Security call options and, simultaneously, go long (buy) the Underlying Security put options to try to replicate inverse exposure to the share price movements of the Underlying Security. The put options purchased by the Fund and the call options sold by the Fund will generally have three-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The Fund uses the proceeds from selling call options to help pay for the purchased put options. The combination of the long put options and sold call options provides the Fund with investment exposure equal to approximately -100% of the Underlying Security's share price changes for the duration of the applicable options exposure (i.e., the synthetic short position is expected to gain value when the share price of the Underlying Security decreases and to lose value when the share price of the Underlying Security increases).

2. Covered Put Writing

As part of its strategy, the Fund will write (sell) put option contracts on the Underlying Security to generate income. The put options written (sold) by the Fund will generally have an expiration of one month or less (the "Put Period") and a strike price that is approximately 0%-15% below the then-current Underlying Security's share price at the time of such sales.

It is important to note that the sale of the Underlying Security put option contracts will limit the Fund's participation in decreases in the Underlying Security's share price. If the share price of the Underlying Security decreases, the above-referenced synthetic short exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's share price decreases beyond the strike price of one or more of the sold (short) put option contracts, the Fund will lose money on those short put positions, and the losses will, in turn, limit the gains of the Fund's synthetic short exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic short exposure to the Underlying Security and the sold (short) Underlying Security put positions) will limit the Fund's participation in decreases in the Underlying Security's share price beyond a certain point.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered put strategy.

4. OTM Call Purchasing

The Fund purchases out-of-the-money (OTM) calls to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value. .

OTM call options are a type of options contract where the strike price is set higher than the current market price of the underlying asset, referred to here as the Underlying Security. When the Fund buys these OTM call options, it is essentially setting a fixed price level. This level acts as a cap on the Fund's potential losses that might arise from its indirect inverse exposure to the share price of the Underlying Security. **However, this loss capping works only if the Underlying Security's share price rises to or above the strike price of the OTM call options that were purchased. If the share price increases but stays below the strike price of these options, the Fund will incur losses proportionate to this price increase.**

For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund's losses will be capped at approximately 70%.

The Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund's value and/or any income otherwise generated by the Fund's investment strategy.

The Fund intends to maintain its synthetic covered put strategy through the use of options contracts. As the options contracts it holds are traded, exercised or expire, it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) put option contracts on the Underlying Security as described above. The income, in the form of option premiums received from such option sales, will be primarily influenced by the volatility of the Underlying Security shares, although other factors, including interest rates, will also impact the level of income.
- Investing in short-term U.S. Treasury securities. The income generated by such securities will be influenced by interest rates at the time of investment.

The Fund's income from writing (selling) put option contracts on the Underlying Security will be partially offset (reduced) by the premiums paid for purchasing OTM call options, which are purchased to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value.

<u>Fund Portfolio</u>

The Fund's principal holdings are described below:

YieldMax™ Short ARKK Option Income Strategy ETF – Principal Holdings			
Portfolio Holdings (All options are based on the value of the Underlying Security)	**Investment Terms**	**Expected Target Maturity**	**Primary Purpose of Holding**
Purchased put option contracts	"at-the-money" (*i.e.,* the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide exposure to negative price returns of the Underlying Security. If the share price of the Underlying Security decreases, these options will generate corresponding increases to the Fund.	3-month to 6-month expiration dates	Combined with the sold call options, creates a synthetic short position on the Underlying Security.
Sold call option contracts	"at-the-money" (*i.e.,* the strike price is equal to the then-current share price of the Underlying Security at the time of sale). They are sold to help pay for the purchased put options described above. However, the sold call option contracts provide exposure to the full extent of any share price increases experienced by the Underlying Security.	3-month to 6-month expiration dates	Combined with the purchased put options, creates a synthetic short position on the Underlying Security.
Sold (short) put option contracts	The strike price is approximately 0%-15% below the then-current share price of the Underlying Security at the time of sale. They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced.	1-month or less expiration dates	Generate income for the Fund in the form of premiums, in return for capping the returns of the Fund's synthetic short position.

U.S Treasury Securities and Cash	Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government. These instruments are used as collateral for the Fund's derivative investments. They will also generate income.	6-month to 2-year maturities	Collateral for the options positions and some additional income.
Purchased call option contracts	"out-of-the-money" (i.e., the strike price is set above the then-current share price of the Underlying Security at the time of purchase). They limit the Fund's potential losses if the share price of the Underlying Security experiences significant gains. They represent a cost (debit) that will partially offset (reduce) the net premium received from the sale of the put options.	1-month to 6-month expiration dates	Limit the maximum loss of the Fund's synthetic short position.

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund's net assets and the market value of the options package is expected to be between 0% and 50% of the Fund's net assets. The combination of these investment instruments provides indirect inverse investment exposure to the share price of the Underlying Security equal to at least 100% of the Fund's total assets.

The Fund is classified as "non-diversified" under the 1940 Act.

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

ARKK

ARKK's investment objective is long-term growth of capital. ARKK is an actively-managed ETF that invests under normal circumstances primarily (at least 65% of its assets) in domestic and foreign equity securities of companies that are relevant to the Fund's investment theme of disruptive innovation. ARKK's investment adviser defines "disruptive innovation" as the introduction of a technologically enabled new product or service that potentially changes the way the world works. ARKK's investment adviser believes that companies relevant to this theme are those that rely on or benefit from the development of new products or services, technological improvements and advancements in scientific research relating to the areas of genomics (which ARKK's adviser defines as "the study of genes and their functions, and related techniques, e.g., genomic sequencing); innovation in automation and manufacturing, transportation, energy, artificial intelligence and materials; the increased use of shared technology, infrastructure and services; and technologies that make financial services more efficient.

Under normal circumstances, substantially all of ARKK's assets will be invested in equity securities, including common stocks, partnership interests, business trust shares and other equity investments or ownership interests in business enterprises. ARKK's investments will include micro-, small-, medium- and large-capitalization companies. ARKK's investments in foreign equity securities will be in both developed and emerging markets. ARKK may invest in foreign securities listed on foreign exchanges as well as American Depositary Receipts ("ADRs") and Global Depositary Receipts ("GDRs").

You can find ARKK's prospectus and other information about the ETF, including the most recent reports to shareholders, online by reference to the Investment Company Act File No. 811-22883 through the SEC's website at www.sec.gov.

The information in this prospectus regarding ARKK comes from its filings with the SEC. You are urged to refer to the SEC filings made by ARKK and to other publicly available information (e.g., the ETF's annual reports) to obtain an understanding of the ETF's business and financial prospects. The description of ARKK's principal investment strategies contained herein was taken directly from ARKK's prospectus, dated November 30, 2023.

This document relates only to the securities offered hereby and does not relate to the shares of ARKK or other securities of ARKK. The Fund has derived all disclosures contained in this document regarding ARKK from the publicly available documents. In connection with the offering of the securities, None of the Fund, the Trust, the Adviser, the Sub-Adviser, or their respective affiliates has participated in the preparation of such documents or made any due diligence inquiry with respect to ARKK. None of the Fund, the Trust, the Adviser, the Sub-Adviser, or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding ARKK is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of

ARKK (and therefore the price of ARKK at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning ARKK could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser, the Sub-Adviser, or their respective affiliates makes any representation to you as to the performance of ARKK.

THE FUND, TRUST, ADVISER, AND SUB-ADVISER ARE NOT AFFILIATED WITH ARK ETF TRUST, ARKK, OR ARK INVESTMENT MANAGEMENT LLC.

Due to the Fund's investment strategy, the Fund's investment exposure is inversely related to the industry or group of industries, if any, in which ARKK may concentrate its investments. As of July 31, 2023, ARKK is not concentrated in any industry, but had significant holdings in the information technology and health care sectors.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

ARKK Price Appreciation Risk. As part of the Fund's synthetic covered put strategy, the Fund purchases and sells call and put option contracts that are based on the share price of ARKK (the "Underlying Security"). This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund's indirect inverse exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security's share price **increases**. **If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses.** The Fund may also be subject to the following risks:

Indirect Investment in ARKK Risk. The ARK Innovation ETF is not affiliated with the Trust, the Fund, the Adviser, the Sub-Adviser, or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of ARKK but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be adversely impacted by increases in the share price of the Underlying Security.

Underlying Security Trading Risk. The trading price of the Underlying Security may become less volatile over time, which could have an adverse impact on the Fund's performance. The Fund's synthetic covered put strategy is designed to benefit from significant price fluctuations in the Underlying Security. However, if the Underlying Security experiences reduced volatility, it may lead to a decrease in the Fund's potential returns.

Historically, the Underlying Security's shares have exhibited substantial price swings, but there is a possibility that market conditions, investor sentiment, or other factors may contribute to decreased volatility in the future. Such reduced volatility could limit the opportunities for the Fund to profit from its credit spread positions, as the strategy relies on price differentials between options with varying strike prices.

It's important to note that the Fund's performance is closely tied to the dynamics of the Underlying Security's share price. As such, any significant reduction in the volatility of the Underlying Security's share price may present challenges for the Fund's synthetic covered put strategy and may affect its ability to achieve its investment objectives. Investors should consider this potential risk when evaluating their investment in the Fund.

ARKK Good Performance Risk. ARKK may meet or exceed its investment objectives, and the share price of the Underlying Security may increase significantly (which would be a detriment to the Fund). The value of ARKK's investments may rise due to positive market and economic conditions, favorable perceptions regarding the industries in which the issuers of securities ARKK holds participate, or factors relating to specific companies in which ARKK invests. These can include stock movements, purchases or sales of securities by ARKK, government policies, litigation, and changes in interest rates, inflation, the financial condition of the securities' issuer or perceptions of the issuer, or economic conditions in general or specific to the issuer. Equity securities may also be particularly aligned with general movements in the stock market, and a rise in the broader market may positively affect the value of ARKK's equity investments.

Inverse Currency Risk: The Fund is indirectly exposed to inverse (opposite) currency risk due to any ARKK investments that are denominated in foreign currencies. As ARKK's net asset value is based on the U.S. dollar, shares of ARKK may gain value if the local currency of a foreign market appreciates against the U.S. dollar, even if the local currency value of ARKK's holdings goes down. Currency exchange rates can be volatile and unpredictable, which may beneficially affect ARKK, and therefore harm the Fund. Delays in converting or transferring U.S. dollars to foreign currencies for purchasing portfolio investments may enhance ARKK's performance, including because any delay could result in ARKK securing an investment opportunity at a lower price than originally intended, or accruing interest on cash holdings. These factors could result in gains to the share price of ARKK and therefore decreases to the Fund's share price.

Inverse Disruptive Innovation Risk: The Fund is indirectly inversely exposed to companies ARKK's investment adviser believes are capitalizing on disruptive innovation indirectly which subjects the Fund to the risks if such companies perform well. ARKK invests in companies that ARKK's investment adviser believes are capitalizing on disruptive innovation and developing technologies to displace older technologies or create new markets, and they may in fact do so. Companies that initially develop a novel technology may be able to capitalize on the technology. ARKK may invest in a company that does not currently derive any revenue from disruptive innovations or technologies, but such companies may derive significant revenue from disruptive innovations or technologies in the future. A disruptive innovation or technology may constitute a large portion of a company's overall business. As a result, the success of a disruptive innovation or technology may materially affect the value of the equity securities issued by the company and, in turn, benefit the share price of ARKK. As a result, the Fund may suffer significant losses.

Inverse Health Care Sector Risk: ARKK is exposed to companies in the health care sector which indirectly subjects the Fund to the inverse risks associated with such companies. The health care sector may benefit from government regulations and government health care programs, steady or increasing reimbursement for medical expenses, stability or reductions in the cost of medical products and services, and product liability claims, among other factors. In addition, the sector is driven by a consistent demand for healthcare services and products, which may be further amplified by an aging global population and increasing health awareness. Innovations in medical technology, treatments, and pharmaceuticals may lead to new product lines and services, potentially boosting company revenues and stock performance. Additionally, healthcare is somewhat insulated from economic downturns because medical care is a necessity rather than a luxury, leading to stable revenue streams. Government and private investment in healthcare, along with supportive regulations, can also contribute to the sector's growth. Additionally, strategic partnerships, mergers, and acquisitions within the industry can lead to enhanced research capabilities and accelerated growth, which may result in high growth potential. These combined factors can lead to robust performance for healthcare companies' stocks, which, in turn, would hurt the Fund's performance.

- *Inverse Biotechnology Company Risk*: Biotechnology stocks may perform well due to the sector's strong potential for innovation and breakthroughs in medicine. Biotechnology firms are often at the forefront of developing novel therapies, drugs, and medical technologies, addressing unmet medical needs and creating significant value when successful. Moreover, biotechnology companies often benefit from robust patent protections, providing them with a competitive edge and potential revenue streams.

- *Inverse Pharmaceutical Company Risk*: Pharmaceutical company stocks may perform well due to the essential and inelastic demand for their products, as medications and treatments may be crucial for health and well-being. These companies may have strong pipelines of drugs in various stages of development, offering the potential for substantial revenues upon successful approval and market entry. Additionally, their global reach and diversification across therapeutic areas provide resilience against market volatility. As a result, the Fund may suffer significant losses.

Inverse Information Technology Sector Risk: ARKK is exposed to companies in the information technology sector which indirectly subjects the Fund to the inverse risks associated with such companies. The information technology sector may experience robust performance, due to its pivotal role in the ongoing digital transformation in various industries. The sector's prospects may be buoyed by rapid technological innovation, escalating global internet penetration, and an augmented reliance on cloud computing and data analytics. As a result, the Fund may suffer significant losses.

Inverse Internet Companies Risk: Internet entities may prove well-positioned to capitalize from a continued growth in global internet adoption, and a significant migration of services and products to digital platforms. These entities often leverage network effects, where the incremental value of their services escalates with user proliferation, fostering strong user base expansion and the potential for material profit margins. Moreover, the extensive data troves they amass may enable precision-targeted advertising and service offerings, which may generate strong revenue streams. As a result, the Fund may suffer significant losses.

Inverse Semiconductor Companies Risk: The semiconductor industry may gain from escalating demand for electronic devices and the burgeoning proliferation of cutting-edge technologies such as 5G, artificial intelligence, and the Internet of Things

(IoT). Semiconductors, being the primary components of electronic devices, will likely prove indispensable for ongoing technological innovation. Despite susceptibility to cyclical market dynamics, the industry's long-term outlook appears bullish, propelled by the continued pursuit of more sophisticated and potent semiconductor solutions across a multitude of sectors. As a result, the Fund may suffer significant losses.

Inverse Software Companies Risk: Software companies appear strategically positioned for growth, driven by demand for digital solutions across other industries. The transition towards subscription-based models (Software as a Service - SaaS) may provide a consistent revenue influx and fortify customer retention. These companies may benefit from substantial scalability, enabling user base augmentation with minimal incremental costs. Moreover, continued innovation and the development of specialized solutions tailored to diverse industry-specific requisites may present ample opportunities for growth and market penetration. As a result, the Fund may suffer significant losses.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the Underlying Security and Fund's portfolio of derivatives, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund, in particular, the value of the options contracts in which it invests are substantially influenced by the value of ARKK. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly moves with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in values options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain its synthetic cover put strategy through the use of options contracts, as the options contracts it holds are traded, exercised or expire, it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of put option contracts, which limits the degree to which the Fund will benefit from decreases in value experienced by ARKK over the Put Period. This means that if ARKK experiences a decrease in value below the strike price of the sold put options during a Put Period, the Fund will likely not experience that increase to the same extent and any Fund gains may significantly differ from the level of ARKK losses over the Put Period. Additionally, because the Fund is limited in the degree to which it will participate in decreases in value experienced by ARKK over each Put Period, but has significant negative exposure to any increases in value experienced by ARKK over the Put Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the inverse of the performance of ARKK. The Fund's ability to benefit from ARKK losses will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold put option contracts and will vary from Put Period to Put Period. The value of the options contracts is affected by changes in the value and dividend rates of ARKK, changes in interest rates, changes in the actual or perceived volatility of ARKK and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of ARKK changes and time moves towards the expiration of each Put Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly inversely correlate on a day-to-day basis with the returns of ARKK. The amount of time remaining until the options contract's expiration date affects the impact that the value of the options contracts have on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the ARKK will result in changes to the Fund's NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than the inverse of the changes experienced by ARKK.

Purchased OTM Call Options Risk. The Fund's strategy is subject to potential losses if the Underlying Security shares increase in value, which may not be offset by the purchase of out-of-the-money (OTM) call options. The Fund purchases OTM calls to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value. However, the OTM call options will cap the Fund's losses only to the extent that the share price of the Underlying Security increases to a price that is at or above the strike price of the purchased OTM call options. Any increase in the share price of the Underlying Security to a price that is below the strike price of the purchased OTM call options will result in a corresponding loss for the Fund. For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund's losses will be capped at approximately 70%. Notwithstanding the foregoing, if the OTM call options have a strike price that is approximately 100% above the then-current share price of the Underlying Security at the time of the call option purchase, and the share price of the Underlying Security increases by at least 100% during the term of the purchased OTM call options, the Fund will lose all its value. Lastly, the Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund's value and/or any income otherwise generated by the Fund's investment strategy.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, the monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Put Writing Strategy Risk. The path dependency (*i.e.*, the continued use) of the Fund's put writing (selling) strategy will impact the extent that the Fund participates in price decreases of ARKK and, in turn, the Fund's returns, both during the term of the sold put options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money put options having a one-month term, the Fund's participation in the negative price returns of ARKK will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (*i.e.*, 5 months x 7%) of any negative price returns of ARKK, or the Fund may even lose money, even if the ARKK share price has decreased by at least that much over such period, if during any month over that period ARKK's share price decreased by less than 7%. This example illustrates that both the Fund's participation in the negative price returns of ARKK and its returns will depend not only on the price of ARKK but also on the path that ARKK takes over time.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other

APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. This risk may be greater for the Fund as it seeks to have exposure to a single reference security as opposed to a more diverse portfolio like a traditional pooled investment. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at a market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that reference a single security, such as ARKK's shares being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. These costs, in turn, could decrease the value of the Fund or of its distributions, if any. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from realizing gains or achieving a high correlation with the inverse of ARKK. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund, Adviser, and Sub-Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Recent Market Events Risk. U.S. and international markets have experienced significant periods of volatility in recent years and months due to a number of economic, political and global macro factors including the impact of COVID-19 as a global pandemic, which has resulted in a public health crisis, disruptions to business operations and supply chains, stress on the global healthcare system, growth concerns in the U.S. and overseas, staffing shortages and the inability to meet consumer demand, and widespread concern and uncertainty. The global recovery from COVID-19 is proceeding at slower than expected rates due to the emergence of variant strains and may last for an extended period of time. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (ARKK), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of ARKK and a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC serves as investment adviser to the Fund.

Investment Sub-Adviser: ZEGA Financial, LLC serves as the investment sub-adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Mick Brokaw, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Jay Pestrichelli, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Michael Venuto, Chief Investment Officer for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (Aps) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

When available, information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

SUMMARY INFORMATION

YieldMax™ Short NVDA Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income. The Fund's secondary investment objective is to seek inverse (opposite) exposure to the share price of the common stock of Nvidia Corporation ("NVDA"), subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses[(1)] (expenses that you pay each year as a percentage of the value of your investment)	
Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses[(2)]	0.00%
Total Annual Fund Operating Expenses	0.99%

(1) The Fund's adviser will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), and litigation expenses, and other non-routine or extraordinary expenses.

(2) Based on estimated amounts for the current fiscal year.

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest $10,000 in the Fund for the time periods indicated and then redeem or hold all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	**3 Years**
$101	$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect *inverse* exposure to the share price (*i.e.*, the price returns) of the common stock of Nvidia Corporation ("NVDA"). The Fund's potential for gains from **decreases** in the share prices of NVDA's stock (the "Underlying Security") is limited. If the share price of the Underlying Security significantly decreases, the Fund will not fully benefit from the inverse of those decreases. The Fund will employ its investment strategy as it relates to the Underlying Security regardless of whether there are periods of strong market, economic, or other conditions and will not take temporary defensive positions during such periods.

As further described below, the Fund uses a synthetic covered put strategy to provide income and indirect *inverse* exposure to the share price returns of the Underlying Security, subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. That is, the Fund not only seeks to generate income from its options investments but also aims to derive additional gains when the share price of the Underlying Security **decreases**. The Fund's options contracts provide:

- indirect inverse exposure to the share price returns of the Underlying Security,

- current income from the option premiums, and
- a limit on the Fund's participation in gains, if any, arising from **decreases** in the share price of the Underlying Security.

For more information, see sections "The Fund's Use of Option Contracts" and "Synthetic Covered Put Strategy" below.

The Fund's investment adviser is Tidal Investments LLC ("Tidal" or the "Adviser") and the investment sub-adviser is ZEGA Financial, LLC ("ZEGA" or the "Sub-Adviser").

Why invest in the Fund?

- The Fund seeks to benefit when the share price of the Underlying Security decreases. The Fund's potential corresponding benefit from decreases in the share price of the Underlying Security is limited.
- The Fund seeks to generate monthly income, which is not dependent on the price depreciation of the Underlying Security.
- The Fund seeks to manage potential losses (i.e., cap losses if the share price of the Underlying Security experiences significant gains) by purchasing out-of-the-money call options (further described below).

Although the Fund may not fully benefit from decreases in the Underlying Security's share price, the Fund's portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security. Further, an Investment in the Fund differs from "short selling" or "shorting" the Underlying Security.

- The Fund's strategy will cap its potential gains if the Underlying Security shares decrease in value.
- The Fund's strategy is subject to potential losses if the Underlying Security shares increase in value, which may not be offset by income received by the Fund or by the purchase of out-of-the-money call options (further described below).
- The Fund does not invest directly in the Underlying Security.
- The Fund does not directly short the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund's Use of Option Contracts

As part of the Fund's synthetic covered put strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLexible EXchange® ("FLEX") call and put option contracts that are based on the share price of the Underlying Security. The Fund will initially use only European FLEX options, but may also use options that are exercisable at any time (i.e. American style options contracts).

See the "Additional Information About the Fund" section for an overview of put and call option terminology.

Synthetic Covered Put Strategy Overview

In seeking to achieve its investment objective, the Fund will implement a "*synthetic* covered put" strategy using the standardized exchange-traded and FLEX options.

- A *traditional* covered put strategy is an investment strategy where an investor (the Fund) sells a put option on an Underlying Security it is short.

- A *synthetic* covered put strategy is similar to a traditional covered put strategy in that the investor sells a put option that is based on the value of the Underlying Security. However, in a synthetic covered put strategy, the investor (the Fund) does not actually short the Underlying Security, but rather seeks to synthetically replicate a short position in the Underlying Security (i.e., it seeks inverse exposure to the share price movements of the Underlying Security) through the use of various investment instruments.

The Fund's synthetic covered put strategy consists of the following four elements, each of which is described in greater detail below:

- Synthetic short exposure to the Underlying Security, which allows the Fund to seek to participate, on an inverse basis, in changes, up or down, to the price of the Underlying Security's shares.

- Covered put writing (where the Underlying Security put options are sold against the synthetic short portion of the strategy), which allows the Fund to generate income.

- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

- Out-of-the money ("OTM") call options, which are purchased to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value.

However, this loss capping works only if the Underlying Security's share price rises to or above the strike price of the OTM call options that were purchased. If the share price increases but stays below the strike price of these options, the Fund will incur losses proportionate to this price increase.

Synthetic Covered Put Strategy

1. Synthetic Short Exposure

To achieve a synthetic short exposure to the Underlying Security, the Fund will write (sell) the Underlying Security call options and, simultaneously, go long (buy) the Underlying Security put options to try to replicate inverse exposure to the share price movements of the Underlying Security. The put options purchased by the Fund and the call options sold by the Fund will generally have three-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The Fund uses the proceeds from selling call options to help pay for the purchased put options. The combination of the long put options and sold call options provides the Fund with investment exposure equal to approximately -100% of the Underlying Security's share price changes for the duration of the applicable options exposure (i.e., the synthetic short position is expected to gain value when the share price of the Underlying Security decreases and to lose value when the share price of the Underlying Security increases).

2. Covered Put Writing

As part of its strategy, the Fund will write (sell) put option contracts on the Underlying Security to generate income. The put options written (sold) by the Fund will generally have an expiration of one month or less (the "Put Period") and a strike price that is approximately 0%-15% below the then-current Underlying Security's share price at the time of such sales.

It is important to note that the sale of the Underlying Security put option contracts will limit the Fund's participation in decreases in the Underlying Security's share price. If the share price of the Underlying Security decreases, the above-referenced synthetic short exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's share price decreases beyond the strike price of one or more of the sold (short) put option contracts, the Fund will lose money on those short put positions, and the losses will, in turn, limit the gains of the Fund's synthetic short exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic short exposure to the Underlying Security and the sold (short) Underlying Security put positions) will limit the Fund's participation in decreases in the Underlying Security's share price beyond a certain point.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered put strategy.

4. OTM Call Purchasing

The Fund purchases out-of-the-money (OTM) calls to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value.

OTM call options are a type of options contract where the strike price is set higher than the current market price of the underlying asset, referred to here as the Underlying Security. When the Fund buys these OTM call options, it is essentially setting a fixed price level. This level acts as a cap on the Fund's potential losses that might arise from its indirect inverse exposure to the share price of the Underlying Security. **However, this loss capping works only if the Underlying Security's share price rises to or above the strike price of the OTM call options that were purchased. If the share price increases but stays below the strike price of these options, the Fund will incur losses proportionate to this price increase.**

For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund's losses will be capped at approximately 70%.

The Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund's value and/or any income otherwise generated by the Fund's investment strategy.

The Fund intends to maintain its synthetic covered put strategy through the use of options contracts. As the options contracts it holds are traded, exercised or expire, it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) put option contracts on the Underlying Security as described above. The income, in the form of option premiums received from such option sales, will be primarily influenced by the volatility of the Underlying Security shares, although other factors, including interest rates, will also impact the level of income.

- Investing in short-term U.S. Treasury securities. The income generated by such securities will be influenced by interest rates at the time of investment.

The Fund's income from writing (selling) put option contracts on the Underlying Security will be partially offset (reduced) due to the premiums paid for purchasing OTM call options, which are purchased to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value.

<u>Fund Portfolio</u>

The Fund's principal holdings are described below:

YieldMax™ Short NVDA Option Income Strategy ETF – Principal Holdings			
Portfolio Holdings (All options are based on the value of the Underlying Security)	**Investment Terms**	**Expected Target Maturity**	**Primary Purpose of Holding**
Purchased put option contracts	"at-the-money" (*i.e.,* the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide exposure to negative price returns of the Underlying Security. If the share price of the Underlying Security decreases, these options will generate corresponding increases to the Fund.	3-month to 6-month expiration dates	Combined with the sold call options, creates a synthetic short position on the Underlying Security.
Sold call option contracts	"at-the-money" (*i.e.,* the strike price is equal to the then-current share price of the Underlying Security at the time of sale). They are sold to help pay for the purchased put options described above. However, the sold call option contracts provide exposure to the full extent of any share price increases experienced by the Underlying Security.	3-month to 6-month expiration dates	Combined with the purchased put options, creates a synthetic short position on the Underlying Security.
Sold (short) put option contracts	The strike price is approximately 0%-15% below the then-current share price of the Underlying Security at the time of sale. They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced.	1-month or less expiration dates	Generate income for the Fund in the form of premiums, in return for capping the returns of the Fund's synthetic short position.

U.S Treasury Securities and Cash	Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government. These instruments are used as collateral for the Fund's derivative investments. They will also generate income.	6-month to 2-year maturities	Collateral for the options positions and some additional income.
Purchased call option contracts	"out-of-the-money" (i.e., the strike price is set above the then-current share price of the Underlying Security at the time of purchase). They limit the Fund's potential losses if the share price of the Underlying Security experiences significant gains. They represent a cost (debit) that will partially offset (reduce) the net premium received from the sale of the put options.	1-month to 6-month expiration dates	Limit the maximum loss of the Fund's synthetic short position.

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund's net assets and the market value of the options package is expected to be between 0% and 50% of the Fund's net assets. The combination of these investment instruments provides indirect inverse investment exposure to the share price of the Underlying Security equal to at least 100% of the Fund's total assets.

The Fund is classified as "non-diversified" under the 1940 Act.

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Nvidia Corporation

Nvidia Corporation is a technology company that designs graphics processing units ("GPUs"). Nvidia Corporation has created GPU-based visual computing and accelerated computing platforms that address four separate markets: gaming, professional visualization, data center, and automotive. Nvidia Corporation is listed on Nasdaq. The aggregate market value of the voting stock held by non-affiliates of Nvidia Corporation as of July 28, 2023 was approximately $1.1 trillion (based on the closing sales price of Nvidia Corporation 's common stock as reported by Nasdaq on July 28, 2022).

Nvidia Corporation is registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Information provided to or filed with the SEC by Nvidia Corporation pursuant to the Exchange Act can be located by reference to the SEC file number 000-23985 through the SEC's website at www.sec.gov. In addition, information regarding Nvidia Corporation may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to NVDA or other securities of Nvidia Corporation. The Fund has derived all disclosures contained in this document regarding Nvidia Corporation from the publicly available documents. In connection with the offering of the securities, none of the Fund, the Trust, the Adviser, the Sub-Adviser, or their respective affiliates has participated in the preparation of such documents or made any due diligence inquiry with respect to Nvidia Corporation None of the Fund, the Trust, the Adviser, the Sub-Adviser, or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding Nvidia Corporation is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of Nvidia Corporation (and therefore the price of Nvidia Corporation at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning Nvidia Corporation could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser, the Sub-Adviser, or their respective affiliates makes any representation to you as to the performance of NVDA.

THE FUND, TRUST, ADVISER, AND SUB-ADVISER ARE NOT AFFILIATED WITH NVIDIA CORPORATION.

Due to the Fund's investment strategy, the Fund's economic exposure is inversely related to the industry assigned to NVDA. As of the date of the Prospectus, NVDA is assigned to the semiconductors industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

NVDA Price Appreciation Risk. As part of the Fund's synthetic covered put strategy, the Fund purchases and sells call and put options that are based on the share price of NVDA common stock (the "Underlying Security"). This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund's indirect inverse exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security's share price **increases**. **If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses.** The Fund may also be subject to the following risks:

Indirect Investment in NVDA Risk. Nvidia Corporation is not affiliated with the Trust, the Fund, the Adviser, the Sub-Adviser, or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of Nvidia Corporation but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be adversely impacted by increases in the share price of the Underlying Security.

Underlying Security Trading Risk. The trading price of the Underlying Security may become less volatile over time, which could have an adverse impact on the Fund's performance. The Fund's synthetic covered put strategy is designed to benefit from significant price fluctuations in the Underlying Security. However, if the Underlying Security experiences reduced volatility, it may lead to a decrease in the Fund's potential returns.

Historically, the Underlying Security's shares have exhibited substantial price swings, but there is a possibility that market conditions, investor sentiment, or other factors may contribute to decreased volatility in the future. Such reduced volatility could limit the opportunities for the Fund to profit from its credit spread positions, as the strategy relies on price differentials between options with varying strike prices.

It's important to note that the Fund's performance is closely tied to the dynamics of the Underlying Security's share price. As such, any significant reduction in the volatility of the Underlying Security's share price may present challenges for the Fund's synthetic covered put strategy and may affect its ability to achieve its investment objectives. Investors should consider this potential risk when evaluating their investment in the Fund.

NVDA Good Performance Risk. Nvidia Corporation may meet or exceed its publicly announced expectations or guidelines regarding its business, which could potentially lead to a rise in the share price of the Underlying Security. Nvidia Corporation regularly provides guidance concerning its anticipated financial and business performance, including sales and production projections, future revenues, gross margins, profitability, and cash flows. However, forecasting future events and identifying key factors affecting business conditions inherently involves uncertainty. Nvidia Corporation's guidance may ultimately prove accurate or may prove underestimated, as it relies on assumptions such as global and local economic conditions, anticipated production and sales volumes, average sales prices, supplier and commodity costs, and planned cost reductions. If Nvidia Corporation's guidance is accurate or varies positively from actual results, NVDA's share price could increase significantly and, as a result, the Fund may suffer significant losses.

NVDA is a leader in the semiconductor industry, and may be well-positioned for sustained performance, driven by its strong market share in graphics processing units (GPUs) and newer ventures in artificial intelligence (AI) and autonomous driving. As the global economy becomes increasingly digitized, NVDA's GPUs may remain integral for high-performance computing, gaming, and data centers, sectors, which may continue to experience solid growth. NVDA's foray into AI, with its comprehensive ecosystem and hardware suited for machine learning workloads, may place it at the nexus of an industry poised for substantial growth. Additionally, its strategic partnerships and advancements in the autonomous vehicle space may positively augment its diversified portfolio. With its R&D, strong intellectual property, and strategic acquisitions, Nvidia may capitalize on an expanding demand across these sectors, all of which could significantly increase the share price of NVDA's common stock. As a result, the Fund may suffer significant losses.

Inverse Semiconductor Companies Risk: The semiconductor industry may gain from escalating demand for electronic devices and the burgeoning proliferation of cutting-edge technologies such as 5G, artificial intelligence, and the Internet of Things

(IoT). Semiconductors, being the primary components of electronic devices, will likely prove indispensable for ongoing technological innovation. Despite susceptibility to cyclical market dynamics, the industry's long-term outlook appears bullish, propelled by the continued pursuit of more sophisticated and potent semiconductor solutions across a multitude of sectors, all of which could significantly increase the share price of NVDA's common stock. As a result, the Fund may suffer significant losses.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the Underlying Security and the Fund's portfolio of derivatives, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund, in particular, the value of the options contracts in which it invests are substantially influenced by the value of NVDA. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly moves with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in values options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain its synthetic covered put strategy through the use of options contracts, as the options contracts it holds are traded, exercised or expire, it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of put option contracts, which limits the degree to which the Fund will benefit from decreases in value experienced by NVDA over the Put Period. This means that if NVDA experiences a decrease in value below the strike price of the sold put options during a Put Period, the Fund will likely not experience that increase to the same extent and any Fund gains may significantly differ from the level of NVDA losses over the Put Period. Additionally, because the Fund is limited in the degree to which it will participate in decreases in value experienced by NVDA over each Put Period, but has significant negative exposure to any increases in value experienced by NVDA over the Put Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the inverse of the performance of NVDA. The Fund's ability to benefit from NVDA losses will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold put option contracts and will vary from Put Period to Put Period. The value of the options contracts is affected by changes in the value and dividend rates of NVDA, changes in interest rates, changes in the actual or perceived volatility of NVDA and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of NVDA changes and time moves towards the expiration of each Put Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly inversely correlate on a day-to-day basis with the returns of NVDA. The amount of time remaining until the options contract's expiration date affects the impact that the value of the options contracts have on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the NVDA will result in changes to the Fund's NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than the inverse of the changes experienced by NVDA.

Purchased OTM Call Options Risk. The Fund's strategy is subject to potential losses if the Underlying Security shares increase in value, which may not be offset by the purchase of out-of-the-money (OTM) call options. The Fund purchases OTM calls to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value. However, the OTM call options will cap the Fund's losses only to the extent that the share price of the Underlying Security increases to a price that is at or above the strike price of the purchased OTM call options. Any increase in the share price of the Underlying Security to a price that is below the strike price of the purchased OTM call options will result in a corresponding loss for the Fund. For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund's losses will be capped at approximately 70%. Notwithstanding the foregoing, if the OTM call options have a strike price that is approximately 100% above the then-current share price of the Underlying Security at the time of the call option purchase, and the share price of the Underlying Security increases by at least 100% during the term of the purchased OTM call options, the Fund will lose all its value. Lastly, the Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund's value and/or any income otherwise generated by the Fund's investment strategy.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, the monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Put Writing Strategy Risk. The path dependency (*i.e.*, the continued use) of the Fund's put writing (selling) strategy will impact the extent that the Fund participates in the price decreases of NVDA and, in turn, the Fund's returns, both during the term of the sold put options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money put options having a one-month term, the Fund's participation in the negative price returns of NVDA will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (*i.e.*, 5 months x 7%) of any negative price returns of NVDA, or the Fund may even lose money, even if the NVDA share price has decreased by at least that much over such period, if during any month over that period NVDA's share price decreased by less than 7%. This example illustrates that both the Fund's participation in the negative price returns of NVDA and its returns will depend not only on the price of NVDA but also on the path that NVDA takes over time.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. This risk may be greater for the Fund as it seeks to have exposure to a single reference security as opposed to a more diverse portfolio like a traditional pooled investment. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at a market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that reference a single security, such as NVDA common stock being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. These costs, in turn, could decrease the value of the Fund or of its distributions, if any. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from realizing gains or achieving a high correlation with the inverse of NVDA. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund, Adviser, and Sub-Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Recent Market Events Risk. U.S. and international markets have experienced significant periods of volatility in recent years and months due to a number of economic, political and global macro factors including the impact of COVID-19 as a global pandemic, which has resulted in a public health crisis, disruptions to business operations and supply chains, stress on the global healthcare system, growth concerns in the U.S. and overseas, staffing shortages and the inability to meet consumer demand, and widespread concern and uncertainty. The global recovery from COVID-19 is proceeding at slower than expected rates due to the emergence of variant strains and may last for an extended period of time. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (NVDA), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of NVDA and a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC serves as investment adviser to the Fund.

Investment Sub-Adviser: ZEGA Financial, LLC serves as the investment sub-adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Mick Brokaw, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Jay Pestrichelli, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Michael Venuto, Chief Investment Officer for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (Aps) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

When available, information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

SUMMARY INFORMATION

YieldMax™ Short COIN Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income. The Fund's secondary investment objective is to seek inverse (opposite) exposure to the share price of the common stock of Coinbase Global, Inc. ("COIN"), subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses[(1)] (expenses that you pay each year as a percentage of the value of your investment)	
Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses[(2)]	0.00%
Total Annual Fund Operating Expenses	0.99%

(1) The Fund's adviser will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), and litigation expenses, and other non-routine or extraordinary expenses.

(2) Based on estimated amounts for the current fiscal year.

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest $10,000 in the Fund for the time periods indicated and then redeem or hold all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	**3 Years**
$101	$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect *inverse* exposure to the share price (*i.e.*, the price returns) of the common stock of Coinbase Global, Inc. ("COIN"). The Fund's potential for gains from **decreases** in the share price of COIN's stock (the "Underlying Security") is limited. If the share price of the Underlying Security significantly decreases, the Fund will not fully benefit from the inverse of those decreases. The Fund will employ its investment strategy as it relates to the Underlying Security regardless of whether there are periods of strong market, economic, or other conditions and will not take temporary defensive positions during such periods.

As further described below, the Fund uses a synthetic covered put strategy to provide income and indirect *inverse* exposure to the share price returns of the Underlying Security, subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. That is, the Fund not only seeks to generate income from its options investments but also aims to derive additional gains when the share price of the Underlying Security **decreases**. The Fund's options contracts provide:

- indirect inverse exposure to the share price returns of the Underlying Security,

- current income from the option premiums, and
- a limit on the Fund's participation in gains, if any, arising from the **decreases** in the share price of the Underlying Security.

For more information, see sections "The Fund's Use of Option Contracts" and "Synthetic Covered Put Strategy" below.

The Fund's investment adviser is Tidal Investments LLC ("Tidal" or the "Adviser") and the investment sub-adviser is ZEGA Financial, LLC ("ZEGA" or the "Sub-Adviser").

Why invest in the Fund?

- The Fund seeks to benefit when the share price of the Underlying Security decreases. The Fund's potential corresponding benefit from decreases in the share price of the Underlying Security is limited.
- The Fund seeks to generate monthly income, which is not dependent on the price depreciation of the Underlying Security.
- The Fund seeks to manage potential losses (i.e., cap losses if the share price of the Underlying Security experiences significant gains) by purchasing out-of-the-money call options (further described below).

Although the Fund may not fully benefit from decreases in the Underlying Security's share price, the Fund's portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security. Further, an Investment in the Fund differs from "short selling" or "shorting" the Underlying Security.

- The Fund's strategy will cap its potential gains if the Underlying Security shares decrease in value.
- The Fund's strategy is subject to potential losses if the Underlying Security shares increase in value, which may not be offset by income received by the Fund or by the purchase of out-of-the-money call options (further described below).
- The Fund does not invest directly in the Underlying Security.
- The Fund does not directly short the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund's Use of Option Contracts

As part of the Fund's synthetic covered put strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLexible EXchange® ("FLEX") call and put option contracts that are based on the share price of the Underlying Security. The Fund will initially use only European FLEX options, but may also use options that are exercisable at any time (i.e. American style options contracts).

See the "Additional Information About the Fund" section for an overview of put and call option terminology.

Synthetic Covered Put Strategy Overview

In seeking to achieve its investment objective, the Fund will implement a "*synthetic* covered put" strategy using the standardized exchange-traded and FLEX options. The Fund uses a synthetic put strategy rather than a traditional one, utilizing Treasuries as collateral to potentially achieve higher returns than those of the Underlying Security.

- A *traditional* covered put strategy is an investment strategy where an investor (the Fund) sells a put option on an Underlying Security it is short.

- A *synthetic* covered put strategy is similar to a traditional covered put strategy in that the investor sells a put option that is based on the value of the Underlying Security. However, in a synthetic covered put strategy, the investor (the Fund) does not actually short the Underlying Security, but rather seeks to synthetically replicate a short position in the Underlying Security (i.e., it seeks inverse exposure to the share price movements of the Underlying Security) through the use of various investment instruments.

The Fund's synthetic covered put strategy consists of the following four elements, each of which is described in greater detail below:

- Synthetic short exposure to the Underlying Security, which allows the Fund to seek to participate, on an inverse basis, in changes, up or down, to the price of the Underlying Security's shares.

- Covered put writing (where the Underlying Security put options are sold against the synthetic short portion of the strategy), which allows the Fund to generate income.

● U.S. Treasuries, which are used for collateral for the options, and which also generate income.

● Out-of-the money ("OTM") call options, which are purchased to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value.

However, this loss capping works only if the Underlying Security's share price rises to or above the strike price of the OTM call options that were purchased. If the share price increases but stays below the strike price of these options, the Fund will incur losses proportionate to this price increase.

Synthetic Covered Put Strategy

1. Synthetic Short Exposure

To achieve a synthetic short exposure to the Underlying Security, the Fund will write (sell) the Underlying Security call options and, simultaneously, go long (buy) the Underlying Security put options to try to replicate inverse exposure to the share price movements of the Underlying Security. The put options purchased by the Fund and the call options sold by the Fund will generally have three-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The Fund uses the proceeds from selling call options to help pay for the purchased put options. The combination of the long put options and sold call options provides the Fund with investment exposure equal to approximately -100% of the Underlying Security's share price changes for the duration of the applicable options exposure (i.e., the synthetic short position is expected to gain value when the share price of the Underlying Security decreases and to lose value when the share price of the Underlying Security increases).

2. Covered Put Writing

As part of its strategy, the Fund will write (sell) put option contracts on the Underlying Security to generate income. The put options written (sold) by the Fund will generally have an expiration of one month or less (the "Put Period") and a strike price that is approximately 0%-15% below the then-current Underlying Security share price at the time of such sales.

It is important to note that the sale of the Underlying Security put option contracts will limit the Fund's participation in decreases in the Underlying Security's share price. If the share price of the Underlying Security decreases, the above-referenced synthetic short exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's share price decreases beyond the strike price of one or more of the sold (short) put option contracts, the Fund will lose money on those short put positions, and the losses will, in turn, limit the gains the Fund's synthetic short exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic short exposure to the Underlying Security and the sold (short) Underlying Security put positions) will limit the Fund's participation in decreases in the Underlying Security's share price beyond a certain point.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered put strategy.

4. OTM Call Purchasing

The Fund purchases out-of-the-money (OTM) calls to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value. OTM call options are options contracts where the strike price is set above the current market price of the underlying asset, in this case, the Underlying Security. .

OTM call options are a type of options contract where the strike price is set higher than the current market price of the underlying asset, referred to here as the Underlying Security. When the Fund buys these OTM call options, it is essentially setting a fixed price level. This level acts as a cap on the Fund's potential losses that might arise from its indirect inverse exposure to the share price of the Underlying Security. **However, this loss capping works only if the Underlying Security's share price rises to or above the strike price of the OTM call options that were purchased. If the share price increases but stays below the strike price of these options, the Fund will incur losses proportionate to this price increase.**

For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund's losses will be capped at approximately 70%.

The Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund's value and/or any income otherwise generated by the Fund's investment strategy.

The Fund intends to maintain its synthetic covered put strategy through the use of options contracts. As the options contracts it holds are traded, exercised or expire, it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) put option contracts on the Underlying Security as described above. The income, in the form of option premiums received from such option sales, will be primarily influenced by the volatility of the Underlying Security shares, although other factors, including interest rates, will also impact the level of income.

- Investing in short-term U.S. Treasury securities. The income generated by such securities will be influenced by interest rates at the time of investment.

The Fund's income from writing (selling) put option contracts on the Underlying Security will be partially offset (reduced) due to the premiums paid for purchasing OTM call options, which are purchased to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value.

Fund Portfolio

The Fund's principal holdings are described below:

YieldMax™ Short COIN Option Income Strategy ETF – Principal Holdings			
Portfolio Holdings (All options are based on the value of the Underlying Security)	**Investment Terms**	**Expected Target Maturity**	**Primary Purpose of Holding**
Purchased put option contracts	"at-the-money" (*i.e.,* the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide exposure to negative price returns of the Underlying Security. If the share price of the Underlying Security decreases, these options will generate corresponding increases to the Fund.	3-month to 6-month expiration dates	Combined with the sold call options, creates a synthetic short position on the Underlying Security.
Sold call option contracts	"at-the-money" (*i.e.,* the strike price is equal to the then-current share price of the Underlying Security at the time of sale). They are sold to help pay for the purchased put options described above. However, the sold call option contracts provide exposure to the full extent of any share price increases experienced by the Underlying Security.	3-month to 6-month expiration dates	Combined with the purchased put options, creates a synthetic short position on the Underlying Security.
Sold (short) put option contracts	The strike price is approximately 0%-15% below the then-current share price of the Underlying Security at the time of sale. They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced.	1-month or less expiration dates	Generate income for the Fund in the form of premiums, in return for capping the returns of the Fund's synthetic short position.

U.S Treasury Securities and Cash	Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government. These instruments are used as collateral for the Fund's derivative investments. They will also generate income.	6-month to 2-year maturities	Collateral for the options positions and some additional income.
Purchased call option contracts	"out-of-the-money" (i.e., the strike price is set above the then-current share price of the Underlying Security at the time of purchase). They limit the Fund's potential losses if the share price of the Underlying Security experiences significant gains. They represent a cost (debit) that will partially offset (reduce) the net premium received from the sale of the put options.	1-month to 6-month expiration dates	Limit the maximum loss of the Fund's synthetic short position.

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund's net assets and the market value of the options package is expected to be between 0% and 50% of the Fund's net assets. The combination of these investment instruments provides indirect inverse investment exposure to the share price of the Underlying Security equal to at least 100% of the Fund's total assets.

The Fund is classified as "non-diversified" under the 1940 Act.

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Coinbase Global, Inc.

Coinbase Global, Inc. offers a variety of products and services that enable individuals, businesses, and developers to participate in the crypto economy. It provides customers around the world with a platform for buying, selling, transferring, and storing digital assets. Coinbase Global, Inc. is listed on Nasdaq. The aggregate market value of the voting and non-voting stock held by non-affiliates of Coinbase Global, Inc. on June 30, 2023, was approximately $12.0 billion based on the closing sales price of Coinbase Global, Inc.'s Class A common stock as reported on Nasdaq on that date.

Coinbase Global, Inc. is registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Information provided to or filed with the SEC by Coinbase Global, Inc. pursuant to the Exchange Act can be located by reference to the SEC file number 001-04321 through the SEC's website at www.sec.gov. In addition, information regarding Coinbase Global, Inc. may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to COIN or other securities of Coinbase Global, Inc. The Fund has derived all disclosures contained in this document regarding Coinbase Global, Inc. from the publicly available documents. In connection with the offering of the securities, none of the Fund, the Trust, the Adviser, the Sub-Adviser, or their respective affiliates has participated in the preparation of such documents or made any due diligence inquiry with respect to Coinbase Global, Inc. None of the Fund, the Trust, the Adviser, the Sub-Adviser, or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding Coinbase Global, Inc. is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of Coinbase Global, Inc. (and therefore the price of Coinbase Global, Inc. at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning Coinbase Global, Inc. could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser, the Sub-Adviser, or their respective affiliates makes any representation to you as to the performance of COIN.

THE FUND, TRUST, ADVISER, AND SUB-ADVISER ARE NOT AFFILIATED WITH COINBASE GLOBAL, INC.

Due to the Fund's investment strategy, the Fund's economic exposure is inversely related to the industry assigned to COIN. As of the date of the Prospectus, COIN is assigned to the electronic data processing services industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

COIN Price Appreciation Risk. As part of the Fund's synthetic covered put strategy, the Fund purchases and sells call and put option contracts that are based on the share price of COIN common stock (the "Underlying Security"). This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund's indirect inverse exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security's share price **<u>increases</u>**. **<u>If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses.</u>** The Fund may also be subject to the following risks:

Indirect Investment in COIN Risk. Coinbase Global, Inc. is not affiliated with the Trust, the Fund, the Adviser, the Sub-Adviser, or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of Coinbase Global, Inc. but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be adversely impacted by increases in the share price of the Underlying Security.

Underlying Security Trading Risk. The trading price of the Underlying Security may become less volatile over time, which could have an adverse impact on the Fund's performance. The Fund's synthetic covered put strategy is designed to benefit from significant price fluctuations in the Underlying Security. However, if the Underlying Security experiences reduced volatility, it may lead to a decrease in the Fund's potential returns.

Historically, the Underlying Security's shares have exhibited substantial price swings, but there is a possibility that market conditions, investor sentiment, or other factors may contribute to decreased volatility in the future. Such reduced volatility could limit the opportunities for the Fund to profit from its credit spread positions, as the strategy relies on price differentials between options with varying strike prices.

It's important to note that the Fund's performance is closely tied to the dynamics of the Underlying Security's share price. As such, any significant reduction in the volatility of the Underlying Security's share price may present challenges for the Fund's synthetic covered put strategy and may affect its ability to achieve its investment objectives. Investors should consider this potential risk when evaluating their investment in the Fund.

COIN Good Performance Risk. Coinbase Global, Inc. may meet or exceed its publicly announced expectations or guidelines regarding its business, which could potentially lead to a rise in the share price of the Underlying Security. Coinbase Global, Inc. regularly provides guidance concerning its anticipated financial and business performance, including sales and production projections, future revenues, gross margins, profitability, and cash flows. However, forecasting future events and identifying key factors affecting business conditions inherently involves uncertainty. Coinbase Global, Inc.'s guidance may ultimately prove accurate or may prove underestimated, as it relies on assumptions such as global and local economic conditions, anticipated production and sales volumes, average sales prices, supplier and commodity costs, and planned cost reductions. If Coinbase Global, Inc.'s guidance is accurate or varies positively from actual results, COIN's share price increase significantly and, as a result, the Fund may suffer significant losses.

Inverse Digital Assets Sector Risk: The digital assets sector encapsulates a wide array of digital currencies, tokens, and other forms of digital value representation, including non-fungible tokens (NFTs). Digital assets have the potential to redefine asset ownership, transferability, and accessibility, leveraging the principles of decentralization and blockchain technology. The sector may experience substantial growth, especially if mainstream acceptance and institutional interest continues or accelerates. Digital assets offer diversification benefits, given their low correlation with traditional asset classes, which could lead to their inclusion in a broader range of investment portfolios. Moreover, the progressive regulatory clarity and the development of sophisticated trading, custody, and risk management solutions are factors that could foster the sector's growth, all of which could significantly increase the share price of COIN's common stock. Further, a number of bitcoin-focused ETFs (e.g., ETFs that invest in spot bitcoin) have recently commenced operations. These bitcoin-focused ETFs may similarly foster the sector's growth, which could significantly increase the share price of COIN's common stock. As a result, the Fund may suffer significant losses.

Inverse Financials Sector Risk: The financials sector, encompassing banks, insurance companies, and diversified financial services, may experience growth, driven by a combination of macroeconomic factors and technological innovation. As interest rates rise, banks stand to benefit from widening net interest margins, improving profitability. Insurers may see enhanced investment income as yields increase, bolstering their financial strength. Moreover, the sector is undergoing a technological transformation, with the adoption of digital banking, fintech innovations, and data analytics enhancing operational efficiencies, customer engagement, and risk management capabilities. This digital evolution may unlock new revenue streams and improve competitive positioning, all of which could significantly increase the share price of COIN's common stock. As a result, the Fund may suffer significant losses.

Inverse Blockchain Sector Risk: The blockchain sector represents a frontier of technological innovation, underpinning not only cryptocurrencies but a spectrum of applications across industries. Its intrinsic attributes of immutability, transparency, and efficiency may make it a compelling foundation for solutions in supply chain management, identity verification, and beyond. If more enterprises and governments recognize its potential to streamline operations and reduce costs, the adoption of blockchain technology may accelerate. The sector may also benefit from the growing interest in decentralized finance (DeFi) and the tokenization of assets, which expand the use cases for blockchain. Investments in companies that develop, implement, or adopt blockchain technology could thus be well-positioned to capitalize on the sector's growth, as it moves from experimental applications to mainstream adoption, all of which could significantly increase the share price of COIN's common stock. As a result, the Fund may suffer significant losses.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the Underlying Security and the Fund's portfolio of derivatives, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund, in particular, the value of the options contracts in which it invests are substantially influenced by the value of COIN. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly moves with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in values options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain its synthetic covered put strategy through the use of options contracts, as the options contracts it holds are traded, exercised or expire, it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of put option contracts, which limits the degree to which the Fund will benefit from decreases in value experienced by COIN over the Put Period. This means that if COIN experiences a decrease in value below the strike price of the sold put options during a Put Period, the Fund will likely not experience that increase to the same extent and any Fund gains may significantly differ from the level of COIN losses over the Put Period. Additionally, because the Fund is limited in the degree to which it will participate in decreases in value experienced by COIN over each Put Period, but has significant negative exposure to any increases in value experienced by COIN over the Put Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the inverse of the performance of COIN. The Fund's ability to benefit from COIN losses will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold put option contracts and will vary from Put Period to Put Period. The value of the options contracts is affected by changes in the value and dividend rates of COIN, changes in interest rates, changes in the actual or perceived volatility of COIN and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of COIN changes and time moves towards the expiration of each Put Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly inversely correlate on a day-to-day basis with the returns of COIN. The amount of time remaining until the options contract's expiration date affects the impact that the value of the options contracts have on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the COIN will result in changes to the Fund's NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than the inverse of the changes experienced by COIN.

Purchased OTM Call Options Risk. The Fund's strategy is subject to potential losses if the Underlying Security shares increase in value, which may not be offset by the purchase of out-of-the-money (OTM) call options. The Fund purchases OTM calls to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value. However, the OTM call options will cap the Fund's losses only to the extent that the share price of the Underlying Security increases to a price that is at or above the strike price of the purchased OTM call options. Any increase in the share price of the Underlying Security to a price that is below the strike price of the purchased OTM call options will result in a corresponding loss for the Fund. For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund's losses will be capped at approximately 70%. Notwithstanding the foregoing, if the OTM call options have a strike price that is approximately 100% above the then-current share price of the Underlying Security at the time of the call option purchase, and the share price of the Underlying Security increases by at least 100% during the term of the purchased OTM call options, the Fund will lose all its value. Lastly, the Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund's value and/or any income otherwise generated by the Fund's investment strategy.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, the monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Put Writing Strategy Risk. The path dependency (*i.e.*, the continued use) of the Fund's put writing (selling) strategy will impact the extent that the Fund participates in the price decreases of COIN and, in turn, the Fund's returns, both during the term of the sold put options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money put options having a one-month term, the Fund's participation in the negative price returns of COIN will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (*i.e.*, 5 months x 7%) of any negative price returns of COIN, or the Fund may even lose money, even if the COIN share price has decreased by at least that much over such period, if during any month over that period COIN's share price decreased by less than 7%. This example illustrates that both the Fund's participation in the negative price returns of COIN and its returns will depend not only on the price of COIN but also on the path that COIN takes over time.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. This risk may be greater for the Fund as it seeks to have exposure to a single reference security as opposed to a more diverse portfolio like a traditional pooled investment. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at a market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that reference a single security, such as COIN's common stock being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. These costs, in turn, could decrease the value of the Fund or of its distributions, if any. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States.

Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from realizing gains or achieving a high correlation with the inverse of COIN. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund, Adviser, and Sub-Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Recent Market Events Risk. U.S. and international markets have experienced significant periods of volatility in recent years and months due to a number of economic, political and global macro factors including the impact of COVID-19 as a global pandemic, which has resulted in a public health crisis, disruptions to business operations and supply chains, stress on the global healthcare system, growth concerns in the U.S. and overseas, staffing shortages and the inability to meet consumer demand, and widespread concern and uncertainty. The global recovery from COVID-19 is proceeding at slower than expected rates due to the emergence of variant strains and may last for an extended period of time. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (COIN), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of COIN and a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC serves as investment adviser to the Fund.

Investment Sub-Adviser: ZEGA Financial, LLC serves as the investment sub-adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Mick Brokaw, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Jay Pestrichelli, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Michael Venuto, Chief Investment Officer for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (Aps) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

When available, information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

SUMMARY INFORMATION

YieldMax™ Short AAPL Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income. The Fund's secondary investment objective is to seek inverse (opposite) exposure to the share price of the common stock of Apple Inc. ("AAPL"), subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses[(1)] (expenses that you pay each year as a percentage of the value of your investment)	
Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses[(2)]	0.00%
Total Annual Fund Operating Expenses	0.99%

(1) The Fund's adviser will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), and litigation expenses, and other non-routine or extraordinary expenses.

(2) Based on estimated amounts for the current fiscal year.

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest $10,000 in the Fund for the time periods indicated and then redeem or hold all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	**3 Years**
$101	$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect *inverse* exposure to the share price (*i.e.*, the price returns) of the common stock of Apple Inc. ("AAPL"). The Fund's potential for gains from **decreases** in the share price of AAPL's stock (the "Underlying Security") is limited. If the share price of the Underlying Security significantly decreases, the Fund will not fully benefit from the inverse of those decreases. The Fund will employ its investment strategy as it relates to the Underlying Security regardless of whether there are periods of strong market, economic, or other conditions and will not take temporary defensive positions during such periods.

As further described below, the Fund uses a synthetic covered put strategy to provide income and indirect *inverse* exposure to the share price returns of the Underlying Security, subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. That is, the Fund not only seeks to generate income from its options investments but also aims to derive additional gains when the share price of the Underlying Security **decreases**. The Fund's options contracts provide:

- indirect inverse exposure to the share price returns of the Underlying Security,
- current income from the option premiums, and

- a limit on the Fund's participation in gains, if any, arising from **decreases** in the share price of the Underlying Security.

For more information, see sections "The Fund's Use of Option Contracts" and "Synthetic Covered Put Strategy" below.

The Fund's investment adviser is Tidal Investments LLC ("Tidal" or the "Adviser") and the investment sub-adviser is ZEGA Financial, LLC ("ZEGA" or the "Sub-Adviser").

Why invest in the Fund?

- The Fund seeks to benefit when the share price of the Underlying Security decreases. The Fund's potential corresponding benefit from decreases in the share price of the Underlying Security is limited.
- The Fund seeks to generate monthly income, which is not dependent on the price depreciation of the Underlying Security.
- The Fund seeks to manage potential losses (i.e., cap losses if the share price of the Underlying Security experiences significant gains) by purchasing out-of-the-money call options (further described below).

Although the Fund may not fully benefit from decreases in the Underlying Security's share price, the Fund's portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security. Further, an Investment in the Fund differs from "short selling" or "shorting" the Underlying Security.

- The Fund's strategy will cap its potential gains if the Underlying Security shares decrease in value.
- The Fund's strategy is subject to potential losses if the Underlying Security shares increase in value, which may not be offset by income received by the Fund or by the purchase of out-of-the-money call options (further described below).
- The Fund does <u>not</u> invest directly in the Underlying Security.
- The Fund does <u>not</u> directly short the Underlying Security.
- Fund shareholders are <u>not</u> entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

<u>The Fund's Use of Option Contracts</u>

As part of the Fund's synthetic covered put strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLexible EXchange® ("FLEX") call and put option contracts that are based on the share price of the Underlying Security. The Fund will initially use only European FLEX options, but may also use options that are exercisable at any time (i.e. American style options contracts).

See the "Additional Information About the Fund" section for an overview of put and call option terminology.

<u>Synthetic Covered Put Strategy Overview</u>

In seeking to achieve its investment objective, the Fund will implement a "*synthetic* covered put" strategy using the standardized exchange-traded and FLEX options. The Fund uses a synthetic put strategy rather than a traditional one, utilizing Treasuries as collateral to potentially achieve higher returns than those of the Underlying Security.

- A *traditional* covered put strategy is an investment strategy where an investor (the Fund) sells a put option <u>on an Underlying Security it is short</u>.

- A *synthetic* covered put strategy is similar to a traditional covered put strategy in that the investor sells a put option that is based on the value of the Underlying Security. However, in a synthetic covered put strategy, the investor (the Fund) does not actually short the Underlying Security, but rather seeks to <u>synthetically replicate a short position in the Underlying Security</u> (i.e., it seeks inverse exposure to the share price movements of the Underlying Security) through the use of various investment instruments.

The Fund's synthetic covered put strategy consists of the following four elements, each of which is described in greater detail below:

- Synthetic short exposure to the Underlying Security, which allows the Fund to seek to participate, on an inverse basis, in changes, up or down, to the price of the Underlying Security's shares.

- Covered put writing (where the Underlying Security put options are sold against the synthetic short portion of the strategy), which allows the Fund to generate income.

- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

- Out-of-the money (“OTM”) call options, which are purchased to seek to manage (cap) the Fund’s potential losses from the Fund’s short exposure to the Underlying Security if it appreciates significantly in value.

However, this loss capping works only if the Underlying Security’s share price rises to or above the strike price of the OTM call options that were purchased. If the share price increases but stays below the strike price of these options, the Fund will incur losses proportionate to this price increase.

<u>Synthetic Covered Put Strategy</u>

1. <u>Synthetic Short Exposure</u>

To achieve a synthetic short exposure to the Underlying Security, the Fund will write (sell) the Underlying Security call options and, simultaneously, go long (buy) the Underlying Security put options to try to replicate inverse exposure to the share price movements of the Underlying Security. The put options purchased by the Fund and the call options sold by the Fund will generally have three-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The Fund uses the proceeds from selling call options to help pay for the purchased put options. The combination of the long put options and sold call options provides the Fund with investment exposure equal to approximately -100% of the Underlying Security’s share price changes for the duration of the applicable options exposure (i.e., the synthetic short position is expected to gain value when the share price of the Underlying Security decreases and to lose value when the share price of the Underlying Security increases).

2. <u>Covered Put Writing</u>

As part of its strategy, the Fund will write (sell) put option contracts on the Underlying Security to generate income. The put options written (sold) by the Fund will generally have an expiration of one month or less (the “Put Period”) and a strike price that is approximately 0%-15% below the then-current Underlying Security’s share price at the time of such sales.

It is important to note that the sale of the Underlying Security put option contracts will limit the Fund’s participation in decreases in the Underlying Security’s share price. If the share price of the Underlying Security decreases, the above-referenced synthetic short exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security’s share price decreases beyond the strike price of one or more of the sold (short) put option contracts, the Fund will lose money on those short put positions, and the losses will, in turn, limit the gains of the Fund’s synthetic short exposure. As a result, the Fund’s overall strategy (i.e., the combination of the synthetic short exposure to the Underlying Security and the sold (short) Underlying Security put positions) will limit the Fund’s participation in decreases in the Underlying Security’s share price beyond a certain point.

3. <u>U.S. Treasuries</u>

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund’s synthetic covered put strategy.

4. <u>OTM Call Purchasing</u>

The Fund purchases out-of-the-money (OTM) calls to seek to manage (cap) the Fund’s potential losses from the Fund’s short exposure to the Underlying Security if it appreciates significantly in value.

OTM call options are a type of options contract where the strike price is set higher than the current market price of the underlying asset, referred to here as the Underlying Security. When the Fund buys these OTM call options, it is essentially setting a fixed price level. This level acts as a cap on the Fund’s potential losses that might arise from its indirect inverse exposure to the share price of the Underlying Security. **However, this loss capping works only if the Underlying Security’s share price rises to or above the strike price of the OTM call options that were purchased. If the share price increases but stays below the strike price of these options, the Fund will incur losses proportionate to this price increase.**

For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund’s losses will be capped at approximately 70%.

The Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund’s value and/or any income otherwise generated by the Fund’s investment strategy.

The Fund intends to maintain its synthetic covered put strategy through the use of options contracts. As the options contracts it holds are traded, exercised or expire, it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) put option contracts on the Underlying Security, as described above. The income, in the form of option premiums received from such option sales, will be primarily influenced by the volatility of the Underlying Security shares, although other factors, including interest rates, will also impact the level of income.

- Investing in short-term U.S. Treasury securities. The income generated by such securities will be influenced by interest rates at the time of investment.

The Fund's income from writing (selling) put option contracts on the Underlying Security will be partially offset (reduced) due to the premiums paid for purchasing OTM call options, which are purchased to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value.

Fund Portfolio

The Fund's principal holdings are described below:

YieldMax™ Short AAPL Option Income Strategy ETF – Principal Holdings			
Portfolio Holdings (All options are based on the value of the Underlying Security)	**Investment Terms**	**Expected Target Maturity**	**Primary Purpose of Holding**
Purchased put option contracts	"at-the-money" (*i.e.,* the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide exposure to negative price returns of the Underlying Security. If the share price of the Underlying Security decreases, these options will generate corresponding increases to the Fund.	3-month to 6-month expiration dates	Combined with the sold call options, creates a synthetic short position on the Underlying Security.
Sold call option contracts	"at-the-money" (*i.e.,* the strike price is equal to the then-current share price of the Underlying Security at the time of sale). They are sold to help pay for the purchased put options described above. However, the sold call option contracts provide exposure to the full extent of any share price increases experienced by the Underlying Security.	3-month to 6-month expiration dates	Combined with the purchased put options, creates a synthetic short position on the Underlying Security.
Sold (short) put option contracts	The strike price is approximately 0%-15% below the then-current share price of the Underlying Security at the time of sale. They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced.	1-month or less expiration dates	Generate income for the Fund in the form of premiums, in return for capping the returns of the Fund's synthetic short position.
U.S Treasury Securities and Cash	Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government.	6-month to 2-year maturities	Collateral for the options positions and some additional income.

	These instruments are used as collateral for the Fund's derivative investments. They will also generate income.		
Purchased call option contracts	"out-of-the-money" (i.e., the strike price is set above the then-current share price of the Underlying Security at the time of purchase). They limit the Fund's potential losses if the share price of the Underlying Security experiences significant gains. They represent a cost (debit) that will partially offset (reduce) the net premium received from the sale of the put options.	1-month to 6-month expiration dates	Limit the maximum loss of the Fund's synthetic short position.

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund's net assets and the market value of the options package is expected to be between 0% and 50% of the Fund's net assets. The combination of these investment instruments provides indirect inverse investment exposure to the share price of the Underlying Security equal to at least 100% of the Fund's total assets.

The Fund is classified as "non-diversified" under the 1940 Act.

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Apple Inc.

Apple Inc. designs, manufactures, and markets smartphones, personal computers, tablets, wearable and accessories, and sells a variety of related services. Apple Inc. is listed on the Nasdaq Global Select Market ("Nasdaq"). The aggregate market value of the voting and non-voting stock held by non-affiliates of Apple Inc., as of March 31, 2023, the last business day of Apple Inc.'s most recently completed second fiscal quarter, was approximately $2.59 trillion.

Apple Inc. is registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Information provided to or filed with the SEC by Apple Inc. pursuant to the Exchange Act can be located by reference to the SEC file number 001-36743 through the SEC's website at www.sec.gov. In addition, information regarding Apple Inc. may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to AAPL or other securities of Apple Inc. The Fund has derived all disclosures contained in this document regarding Apple Inc. from the publicly available documents. In connection with the offering of the securities, none of the Fund, the Trust, the Adviser, the Sub-Adviser, or their respective affiliates has participated in the preparation of such documents or made any due diligence inquiry with respect to Apple Inc. None of the Fund, the Trust, the Adviser, the Sub-Adviser, or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding Apple Inc. is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of Apple Inc. (and therefore the price of Apple Inc. at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning Apple Inc. could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser, the Sub-Adviser, or their respective affiliates makes any representation to you as to the performance of AAPL.

THE FUND, TRUST, ADVISER, AND SUB-ADVISER ARE NOT AFFILIATED WITH APPLE INC.

Due to the Fund's investment strategy, the Fund's economic exposure is inversely related to the industry assigned to AAPL. As of the date of the Prospectus, AAPL is assigned to the computer manufacturing industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

AAPL Price Appreciation Risk. As part of the Fund's synthetic covered put strategy, the Fund purchases and sells call and put option contracts that are based on the share price of AAPL common stock (the "Underlying Security"). This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund's indirect inverse exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security's share price **increases**. **If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses.** The Fund may also be subject to the following risks:

Indirect Investment in AAPL Risk. Apple Inc. is not affiliated with the Trust, the Fund, the Adviser, the Sub-Adviser, or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of Apple Inc. but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be adversely impacted by increases in the share price of the Underlying Security.

Underlying Security Trading Risk. The trading price of the Underlying Security may become less volatile over time, which could have an adverse impact on the Fund's performance. The Fund's synthetic covered put strategy is designed to benefit from significant price fluctuations in the Underlying Security. However, if the Underlying Security experiences reduced volatility, it may lead to a decrease in the Fund's potential returns.

Historically, the Underlying Security's shares have exhibited modest price swings. However, there is a possibility that market conditions, investor sentiment, or other factors may contribute to decreased volatility in the future. Such reduced volatility could limit the opportunities for the Fund to profit from its credit spread positions, as the strategy relies on price differentials between options with varying strike prices.

It's important to note that the Fund's performance is closely tied to the dynamics of the Underlying Security's share price. As such, any significant reduction in the volatility of the Underlying Security's share price may present challenges for the Fund's synthetic covered put strategy and may affect its ability to achieve its investment objectives. Investors should consider this potential risk when evaluating their investment in the Fund.

AAPL Good Performance Risk. Apple Inc. may meet or exceed its publicly announced expectations or guidelines regarding its business, which could potentially lead to a rise in the share price of the Underlying Security. Apple Inc. regularly provides guidance concerning its anticipated financial and business performance, including sales and production projections, future revenues, gross margins, profitability, and cash flows. However, forecasting future events and identifying key factors affecting business conditions inherently involves uncertainty. Apple Inc.'s guidance may ultimately prove accurate or may prove underestimated, as it relies on assumptions such as global and local economic conditions, anticipated production and sales volumes, average sales prices, supplier and commodity costs, and planned cost reductions. If Apple Inc.'s guidance is accurate or varies positively from actual results, AAPL's share price could increase significantly and, as a result, the Fund may suffer significant losses.

In addition, AAPL currently has strong financial health, innovative prowess, and a strong global brand presence. AAPL has substantial cash reserves and may continue to provide shareholder-friendly policies, such as dividends and share buybacks, which increase the value of the Underlying Security, all of which could significantly increase the share price of AAPL's common stock. As a result, the Fund may suffer significant losses.

Inverse Apple Product Risk: Apple Inc.'s products may possess a strong potential for success, through an integration of innovative technology, design aesthetics, and user-friendly interfaces. AAPL has a loyal customer base, that is often eager to adopt the latest iterations of its product offerings. The brand's ecosystem, characterized by interconnectivity between devices and services, enhances user retention and may promote a higher lifetime value per customer. AAPL's offers diversified product lines, including wearables and services, has broadened its revenue streams. These expansions, coupled with AAPL's push into subscription services, may bolster its capacity to generate stable, recurring revenue, all of which could significantly increase the share price of AAPL's common stock. As a result, the Fund may suffer significant losses.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between Underlying Security and the Fund's portfolio of derivatives, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

> *Options Contracts.* The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund, in particular, the value of the options contracts in which it invests are substantially influenced by the value of AAPL. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly moves with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in values options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain its synthetic covered put strategy through the use of options contracts, as the options contracts it holds are traded, exercised or expire, it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of put option contracts, which limits the degree to which the Fund will benefit from decreases in value experienced by AAPL over the Put Period. This means that if AAPL experiences a decrease in value below the strike price of the sold put options during a Put Period, the Fund will likely not experience that increase to the same extent and any Fund gains may significantly differ from the level of AAPL losses over the Put Period. Additionally, because the Fund is limited in the degree to which it will participate in decreases in value experienced by AAPL over each Put Period, but has significant negative exposure to any increases in value experienced by AAPL over the Put Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the inverse of the performance of AAPL. The Fund's ability to benefit from AAPL losses will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold put option contracts and will vary from Put Period to Put Period. The value of the options contracts is affected by changes in the value and dividend rates of AAPL, changes in interest rates, changes in the actual or perceived volatility of AAPL and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of AAPL changes and time moves towards the expiration of each Put Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly inversely correlate on a day-to-day basis with the returns of AAPL. The amount of time remaining until the options contract's expiration date affects the impact that the value of the options contracts have on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the AAPL will result in changes to the Fund's NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than the inverse of the changes experienced by AAPL.

Purchased OTM Call Options Risk. The Fund's strategy is subject to potential losses if the Underlying Security shares increase in value, which may not be offset by the purchase of out-of-the-money (OTM) call options. The Fund purchases OTM calls to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value. However, the OTM call options will cap the Fund's losses only to the extent that the share price of the Underlying Security increases to a price that is at or above the strike price of the purchased OTM call options. Any increase in the share price of the Underlying Security to a price that is below the strike price of the purchased OTM call options will result in a corresponding loss for the Fund. For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund's losses will be capped at approximately 70%. Notwithstanding the foregoing, if the OTM call options have a strike price that is approximately 100% above the then-current share price of the Underlying Security at the time of the call option purchase, and the share price of the Underlying Security increases by at least 100% during the term of the purchased OTM call options, the Fund will lose all its value. Lastly, the Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund's value and/or any income otherwise generated by the Fund's investment strategy.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, the monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Put Writing Strategy Risk. The path dependency (*i.e.*, the continued use) of the Fund's put writing (selling) strategy will impact the extent that the Fund participates in the price decreases of AAPL and, in turn, the Fund's returns, both during the term of the sold put options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money put options having a one-month term, the Fund's participation in the negative price returns of AAPL will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (*i.e.*, 5 months x 7%) of any negative price returns of AAPL, or the Fund may even lose money, even if the AAPL share price has decreased by at least that much over such period, if during any month over that period AAPL's share price decreased by less than 7%. This example illustrates that both the Fund's participation in the negative price returns of AAPL and its returns will depend not only on the price of AAPL but also on the path that AAPL takes over time.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. This risk may be greater for the Fund as it seeks to have exposure to a single reference security as opposed to a more diverse portfolio like a traditional pooled investment. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at a market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that reference a single security, such as AAPL's common stock, being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. These costs, in turn, could decrease the value of the Fund or of its distributions, if any. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from realizing gains or achieving a high correlation with the inverse of AAPL. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund, Adviser, and Sub-Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Recent Market Events Risk. U.S. and international markets have experienced significant periods of volatility in recent years and months due to a number of economic, political and global macro factors including the impact of COVID-19 as a global pandemic, which has resulted in a public health crisis, disruptions to business operations and supply chains, stress on the global healthcare system, growth concerns in the U.S. and overseas, staffing shortages and the inability to meet consumer demand, and widespread concern and uncertainty. The global recovery from COVID-19 is proceeding at slower than expected rates due to the emergence of variant strains and may last for an extended period of time. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (AAPL), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of AAPL and a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC serves as investment adviser to the Fund.

Investment Sub-Adviser: ZEGA Financial, LLC serves as the investment sub-adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Mick Brokaw, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Jay Pestrichelli, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Michael Venuto, Chief Investment Officer for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Purchase and Sale of Shares
The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (Aps) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

When available, information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information
Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation
If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

ADDITIONAL INFORMATION ABOUT THE FUNDS

Investment Objective

The primary investment objective of the YieldMax™ Short TSLA Option Income Strategy ETF (the "Short TSLA Fund") is to seek current income. The Short TSLA Fund's secondary investment objective is to seek inverse (opposite) exposure to the share price of the common stock of Tesla, Inc. ("TSLA"), subject to a limit on potential investment gains.

The primary investment objective of the YieldMax™ Short Innovation Option Income Strategy ETF (the "Short Innovation Fund") is to seek current income. The Short Innovation Fund's secondary investment objective is to seek inverse (opposite) exposure to the share price of the ARK Innovation ETF ("ARKK"), subject to a limit on potential investment gains.

The primary investment objective of the YieldMax™ Short NVDA Option Income Strategy ETF (the "NVDA Inverse Fund") is to seek current income. The Short NVDA Fund's secondary investment objective is to seek inverse (opposite) exposure to the share price of the common stock of Nvidia Corporation ("NVDA"), subject to a limit on potential investment gains.

The primary investment objective of the YieldMax™ Short COIN Option Income Strategy ETF (the "COIN Inverse Fund") is to seek current income. The Short COIN Fund's secondary investment objective is to seek inverse (opposite) exposure to the share price of the common stock of Coinbase Global, Inc. ("COIN"), subject to a limit on potential investment gains.

The primary investment objective of the YieldMax™ Short AAPL Option Income Strategy ETF (the "Short AAPL Fund", and with the Short TSLA Fund, Short Innovation Fund, Short NVDA Fund, and Short COIN Fund, each a "Fund" and collectively, the "Funds") is to seek current income. The Short AAPL Fund's secondary investment objective is to seek inverse (opposite) exposure to the share price of the common stock of Apple Inc. ("AAPL", and with each of TSLA, Innovation, NVDA, and COIN each an "Underlying Issuer" and collectively, the "Underlying Issuers", and the common stock of AAPL, of TSLA, of NVDA and of COIN, along with the shares of ARKK, each an "Underlying Security" and collectively, the "Underlying Securities"), subject to a limit on potential investment gains.

An investment objective is fundamental if it cannot be changed without the consent of the holders of a majority of the outstanding Shares. No Fund's investment objective has been adopted as a fundamental investment policy and therefore each Fund's investment objective may be changed without the consent of that Fund's shareholders upon approval by the Board of Trustees (the "Board") of Tidal Trust II (the "Trust") and at least 60 days' written notice to shareholders.

Principal Investment Strategies

Overview of Options Terminology

Each Fund's options contracts are based on the value of the corresponding Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the "strike price").
- The seller of an option contract may be obligated to deliver shares (for a sold or "short" call option) or buy shares (for a sold or "short" put option) of the underlying asset at a specified price (the "strike price").
- Options contracts must be exercised or traded to close within a specified time frame, or they expire.
- A *traditional* covered put strategy is an investment strategy where an investor (the Fund) sells a put option on an Underlying Security it is short.
- A *synthetic* covered put strategy is similar to a traditional covered put strategy in that the investor sells a put option that is based on the value of the Underlying Security. However, in a synthetic covered put strategy, the investor (the Fund) does not actually short the Underlying Security, but rather seeks to synthetically replicate a short position in the Underlying Security (i.e., it seeks inverse exposure to the share price movements of the Underlying Security) through the use of various investment instruments.
- European and American style options contracts differ primarily in terms of when the options can be exercised. European style options can only be exercised at expiration, while American options can be exercised at any time before expiration.

Synthetic Exposure to the Inverse of the Underlying Security's Share Price Returns

- The Funds purchase put option contracts on their respective Underlying Security generally having three-month to six-month terms and strike prices equal to the then-current share price of the Underlying Security at the time of the purchases to provide the Funds indirect *inverse* exposure to the downside price returns of the Underlying Security. As a buyer of put option contracts, each Fund pays a premium to the seller of the options contracts to obtain the right to sell the Underlying Security at the strike price if the buyer (the Fund) exercises the option contract. The purchased put allows the Fund to participate in the inverse of the price returns of the Underlying Security beyond the strike price of the purchased put option contract at expiration (or earlier, if the Fund closes the option contract prior to expiration); and

- The Funds simultaneously sells call option contracts on their respective Underlying Security to help pay the premium of the purchased put option contracts on the Underlying Security described above. Each Fund sells call option contracts that also generally have three-month to six-month terms and strike prices equal to the then-current share price of the Underlying Security at the time of the sales to provide the Fund indirect *inverse* exposure to the upside price returns of the Underlying Security. As a seller of a call option contract, each Fund receives a premium from the buyer of the option contract in exchange for the Fund's obligation, if exercised, to purchase the Underlying Security at the strike price if the buyer exercises the option contract.

- The combination of the purchased (long) put options and the sold call options described above provides each Fund with investment exposure equal to approximately -100% of its respective Underlying Security's share price changes for the duration of the applicable options exposure. **<u>As a result, this combination of options is expected to gain value when the share price of the Underlying Security decreases and to lose value when the share price of the Underlying Security increases</u>**.

For illustrative purposes, consider a scenario where a synthetic covered put strategy is initiated while the value of the Underlying Security is \$100. This sets the strike price for both the at-the-money call and put options at \$100. Additionally, a short put option is struck 5% out-of-the-money (i.e., below the market value), with a strike price of \$95. If the value of the Underlying Security decreases to \$80, the Fund benefits from the price decline up to the \$95 strike price of the short put option. This scenario would result in a 5% return for the Fund from the decrease in Underlying Security's value.

Generating Monthly Income

- Each Fund sells put option contracts that are based on the value of its respective Underlying Security to generate income via option premiums. On a monthly basis or more frequently, a Fund will sell put option contracts on the Underlying Security with expiration dates of approximately one month or less in the future at strike prices that are approximately equal to 0%-15% below the then-current share price of the Underlying Security. By doing so, a Fund gives up the potential to fully participate in decreases in the Underlying Security share price, if any, beyond the strike price of the sold put options in exchange for income received in the form of put option premium. If the share price of the Underlying Security is greater than the put option's strike price at the expiration of the contract, the option contract will expire worthless and the Fund's return on the sold put position will be the premium originally received for selling the option contract. If the share price of the Underlying Security is less than the strike price at the expiration of the option contract, the Fund will forgo all of the returns that exceed the strike price of the sold put option contract, and there will be a cost to "close out" the now in-the-money put options. The short put options are "closed out" (repurchased) prior to their expiration so that the Fund will not get assigned on the, now, in-the-money put options. At times the put options may be "rolled" instead of simply closed. This is to say, new put options are simultaneously sold to open a new short put position, while the previously sold puts are repurchased to close out the original short put position.

- The Funds purchase multiple series of U.S. Treasury securities to collateralize the options contracts they sell. The U.S. Treasury securities also provide monthly income.

Each Fund's sale of put option contracts to generate income limits the degree to which the Fund will participate in decreases in the price of its respective Underlying Security. **This means that if the Underlying Security experiences a decrease in price, the Fund will likely not experience that increase to the same (inverse) extent (*i.e.*, there is no participation beyond the level of the strike price of the sold put option contracts) and may result in the Fund significantly underperforming the inverse performance of the Underlying Security.** The degree of participation in the Underlying Security losses will depend on the strike price of the short put option contracts and prevailing market conditions, especially market volatility, at the time the Fund sells the put option contracts. The potential for upside returns on the inverse performance of the Underlying Security will also depend on whether a Fund fully "covers" its potential downside price return exposure to the Underlying Security by virtue of its sold put option contracts.

Each Fund buys OTM call options to seek to cap the Fund's potential losses from the Fund's short exposure to the Underlying Security's share price if such share price appreciates significantly.. OTM call options are options contracts where the strike price is set above the current market price of the underlying asset, in this case, the Underlying Security. The purchase of the OTM call options is designed to establish a predefined price level at which all or a portion of a Fund's potential losses from its indirect inverse exposure to the Underlying Security's share price are capped. **However, the OTM call options will cap the Fund's losses only to the extent that the share price of the Underlying Security increases to a price that is at or above the strike price of the purchased OTM call options. Any increase in the share price of the Underlying Security to a price that is below the strike price of the purchased OTM call options will result in a corresponding loss for the Fund.**

For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund's losses will be capped at approximately 70%. The Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund's value and/or any income otherwise generated by the Fund's investment strategy.

The sale of put option contracts will offset price gains experienced by an Underlying Security only to the extent of premiums received from such sold put option contracts. In turn, the premiums received will be partially offset or reduced by the premiums paid for the OTM call options. Each Fund expects to experience losses if the Underlying Security's share price increases over the duration of the options contracts (*e.g.*, if the Underlying Security increases in value by 5%, the Fund should be expected to decrease in value by approximately 5%, before Fund fees and expenses) beyond the income received from the sold put option contract premiums (net of the premiums paid for the OTM call options).

There is no guarantee that each Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Each Fund's NAV is dependent on the aggregate values of the Fund's options contracts, where such values are principally affected by the share price of the Underlying Security, the volatility of the Underlying Security, and the time remaining until the expiration date of the various option contracts held by the Fund. Each Fund's synthetic short exposure strategy will effectively allow that portion of the Fund's assets to move in sync (but inversely) with the daily changes in the Underlying Security's share price.

However, each Fund's benefit from the potential downside in the Underlying Security's price returns is limited by virtue of its sold put option contract positions. The degree to which a shareholder may benefit from the downside exposure to the Underlying Security obtained by a Fund will depend on the time at which the investor purchases Shares of the Fund and the price movements of the Underlying Security. At any given time, there may be limited upside potential for a Fund. If the price of the Underlying Security is near or has fallen below the strike price of a Fund's sold put option contracts when an investor purchases Shares, such investor may have little to no upside potential remaining until the current short puts are replaced by a new set of short puts, as well as remain vulnerable to significant downside risk (if the Underlying Security's share price increases in value), including the loss of their entire investment.

Each Fund will invest significantly in short-term (6-month to 2-year) U.S. Treasury securities as collateral in connection with the Fund's synthetic covered put strategy. U.S. Treasury securities are government debt instruments issued by the United States Department of the Treasury and are backed by the full faith and credit of the United States government. The Funds' investments in U.S. Treasury securities contribute to the monthly income sought by the Funds.

Exchange Traded Options Portfolio

FLEX options are customized options contracts that trade on an exchange but provide investors with the ability to customize key contract terms like strike price, style and expiration date while achieving price discovery in competitive, transparent auctions markets and avoiding the counterparty exposure of "over-the-counter" ("OTC") options positions. Like traditional exchange-traded options, FLEX Options are guaranteed for settlement by the OCC, a market clearinghouse that guarantees performance by counterparties to certain derivatives contracts.

The FLEX options in which the Funds may invest are all European style options (options that are exercisable only on the expiration date). The FLEX options are listed on the Chicago Board Options Exchange.

The Funds will use the market value of its derivatives holdings for the purpose of determining compliance with the 1940 Act and the rules promulgated thereunder. Since the options held by the Funds are exchange-traded, these will be valued on a mark-to-market basis. In the event market prices are not available, the Funds will use fair value pricing pursuant to the fair value procedures adopted by the Board.

Manager of Managers Structure

The Funds and the Adviser have received exemptive relief from the SEC permitting the Adviser (subject to certain conditions and the approval of the Board) to change or select new unaffiliated sub-advisers without obtaining shareholder approval. The relief also permits the Adviser to materially amend the terms of agreements with an unaffiliated sub-adviser (including an increase in the fee paid by the Adviser to the unaffiliated sub-adviser (and not paid by the Fund)) or to continue the employment of an unaffiliated sub-adviser after an event that would otherwise cause the automatic termination of services with Board approval, but without shareholder approval. Shareholders will be notified of any unaffiliated sub-adviser changes. The Adviser has the ultimate responsibility, subject to oversight by the Board, to oversee a sub-adviser and recommend their hiring, termination and replacement.

Investments by Registered Investment Companies

Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies. However, registered investment companies are permitted to invest in other investment companies beyond the limits set forth in Section 12(d)(1) in recently adopted rules under the 1940 Act, subject to certain conditions. Each Fund may rely on Rule 12d1-4 of the 1940 Act, which provides an exemption from Section 12(d)(1) that allows the Fund to invest beyond the limits set forth in Section 12(d)(1) if the Fund satisfies certain conditions specified in Rule 12d1-4, including, among other conditions, that the Fund and its advisory group will not control (individually or in the aggregate) an acquired fund (e.g., hold more than 25% of the outstanding voting securities of an acquired fund that is a registered open-end management investment company).

Principal Risks of Investing in the Funds

There can be no assurance that the Funds will achieve their respective investment objective. The following information is in addition to, and should be read along with, the description of each Fund's principal investment risks in the section titled "Fund Summary— Principal Investment Risks" above. Following the Fund-specific Underlying Security risks, the remaining principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Funds, regardless of the order in which it appears.

TSLA Price Appreciation Risk. The YieldMax™ Short TSLA Option Income Strategy ETF purchases and sells call and put option contracts that are based on the share price of TSLA common stock (the "Underlying Security"). This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund's indirect inverse exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security's share price **increases**. **If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses**. The Fund may also be subject to the following risks:

> *Indirect Investment in TSLA Risk.* Tesla, Inc. is not affiliated with the Trust, the Fund, the Adviser, the Sub-Adviser, or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of Tesla, Inc. but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be adversely impacted by increases in the share price of the Underlying Security.

Underlying Security Trading Risk. The trading price of the Underlying Security may become less volatile over time, which could have an adverse impact on the Fund's performance. The Fund's synthetic covered put strategy is designed to benefit from significant price fluctuations in the Underlying Security. However, if the Underlying Security experiences reduced volatility, it may lead to a decrease in the Fund's potential returns.

Historically, the Underlying Security's shares have exhibited substantial price swings, but there is a possibility that market conditions, investor sentiment, or other factors may contribute to decreased volatility in the future. Such reduced volatility could limit the opportunities for the Fund to profit from its credit spread positions, as the strategy relies on price differentials between options with varying strike prices.

It's important to note that the Fund's performance is closely tied to the dynamics of the Underlying Security's share price. As such, any significant reduction in the volatility of the Underlying Security's share price may present challenges for the Fund's synthetic covered put strategy and may affect its ability to achieve its investment objectives. Investors should consider this potential risk when evaluating their investment in the Fund.

TSLA Good Performance Risk. Tesla, Inc. may meet or exceed its publicly announced expectations or guidelines regarding its business, which could potentially lead to a rise in the price of the Underlying Security. Tesla, Inc. regularly provides guidance concerning its anticipated financial and business performance, including sales and production projections, future revenues, gross margins, profitability, and cash flows. However, forecasting future events and identifying key factors affecting business conditions inherently involves uncertainty. Tesla, Inc.'s guidance may ultimately prove accurate or may prove underestimated, as it relies on assumptions such as global and local economic conditions, anticipated production and sales volumes, average sales prices, supplier and commodity costs, and planned cost reductions. If Tesla, Inc.'s guidance is accurate or varies positively from actual results, TSLA's share price could increase significantly and, as a result, the Fund may suffer significant losses.

Inverse Electric Vehicle Consumer Adoption Risk. Tesla may experience substantial growth if consumer demand for electric vehicles continues to expand. Deviations from expected market developments, be it accelerated growth, shifts in demand, or heightened electric vehicle adoption, could present advantageous conditions for Tesla, Inc.'s business. These conditions might bolster its market position, enhance overall prospects, strengthen financial stability, and improve operational performance. Despite having fewer resources and production capabilities compared to established competitors with traditional internal combustion engine offerings, Tesla, Inc. appears poised to benefit from the expanding electric vehicle sector. As electric vehicles currently constitute a smaller fraction of the overall vehicle market, Tesla, Inc. appears well-positioned to capitalize on factors such as shifting consumer preferences, increased competition from alternative fuel vehicles, and supportive government policies and incentives. Furthermore, Tesla, Inc. competes in a dynamic demographic landscape where innovation and differentiation play key roles. In a sector marked by cyclical sales patterns, Tesla, Inc. has the potential to navigate these trends adeptly, seizing opportunities during market upswings and maintaining resilience during downturns, ultimately contributing to its long-term success.

Inverse Auto Manufacturers Industry Risk. The automotive industry may present continued opportunities for Tesla, Inc.'s business operations. This sector is known for its cyclicality, but Tesla, Inc. may be able to leverage its innovative approaches to minimize the impact of periodic operating losses. Labor disputes, fluctuations in component prices, and supplier disruptions, often encountered by traditional automakers, may be less pronounced for Tesla, Inc. due to its unique production and supply chain strategies. Tesla's investments in cutting-edge automotive technologies, such as autonomous vehicles, may indeed require substantial capital, but they hold the potential for long-term profitability. Additionally, Tesla, Inc.'s nimble approach allows it to respond swiftly to government policies and regulations, potentially aligning its strategies with favorable incentives. While many established automotive manufacturers are diversified, Tesla, Inc.'s focused product line and growing customer base may enable it to effectively navigate industry dynamics and capitalize on factors that can drive its sustained success.

ARKK Price Appreciation Risk. The YieldMax^{TM} Short Innovation Option Income Strategy ETF purchases and sells call and put option contracts that are based on the share price of ARKK (the "Underlying Security"). This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund's indirect inverse exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security's share price **increases**. **If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses**. The Fund may also be subject to the following risks:

Indirect Investment in ARKK Risk. The ARK Innovation ETF is not affiliated with the Trust, the Fund, the Adviser, the Sub-Adviser, or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of ARKK but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be subject to increases in the price performance of the Underlying Security.

Underlying Security Trading Risk. The trading price of the Underlying Security may become less volatile over time, which could have an adverse impact on the Fund's performance. The Fund's synthetic covered put strategy is designed to benefit from significant price fluctuations in the Underlying Security. However, if the Underlying Security experiences reduced volatility, it may lead to a decrease in the Fund's potential returns.

Historically, the Underlying Security has exhibited substantial price swings, but there is a possibility that market conditions, investor sentiment, or other factors may contribute to decreased volatility in the future. Such reduced volatility could limit the opportunities for the Fund to profit from its credit spread positions, as the strategy relies on price differentials between options with varying strike prices.

It's important to note that the Fund's performance is closely tied to the dynamics of the Underlying Security's share price. As such, any significant reduction in the volatility of the Underlying Security may present challenges for the Fund's synthetic covered put strategy and may affect its ability to achieve its investment objectives. Investors should consider this potential risk when evaluating their investment in the Fund.

ARKK Good Performance Risk. ARKK may meet or exceed its investment objectives, and the value of the Underlying Security may increase significantly (which would be a detriment to the Fund). The value of ARKK's investments may rise due to positive market and economic conditions, favorable perceptions regarding the industries in which the issuers of securities ARKK holds participate, or factors relating to specific companies in which ARKK invests. These can include share price movements, purchases or sales of securities by ARKK, government policies, litigation, and changes in interest rates, inflation, the financial condition of the securities' issuer or perceptions of the issuer, or economic conditions in general or specific to the issuer. Equity securities may also be particularly aligned with general movements in the stock market, and a rise in the broader market may positively affect the value of ARKK's equity investments.

Inverse Currency Risk: The Fund is indirectly exposed to inverse (opposite) currency risk due to any ARKK's investments that are denominated in foreign currencies. As ARKK's net asset value is based on the U.S. dollar, ARKK may gain value if the local currency of a foreign market appreciates against the U.S. dollar, even if the local currency value of ARKK's holdings goes down. Currency exchange rates can be volatile and unpredictable, which may beneficially affect ARKK, and therefore the Fund. Delays in converting or transferring U.S. dollars to foreign currencies for purchasing portfolio investments may enhance ARKK's performance, including because any delay could result in ARKK securing an investment opportunity at a lower price than originally intended, or accruing interest on cash holdings. These factors could result in gains to ARKK's share price and therefore losses to the Fund.

Inverse Disruptive Innovation Risk: The Fund is inversely exposed to companies ARKK's investment adviser believes are capitalizing on disruptive innovation indirectly which subjects the Fund to the risks if such companies perform well. ARKK invests in companies that ARKK's investment adviser believes are capitalizing on disruptive innovation and developing technologies to displace older technologies or create new markets, and they may in fact do so. Companies that initially develop a novel technology may be able to capitalize on the technology. ARKK may invest in a company that does not currently derive any revenue from disruptive innovations or technologies, but such companies may derive significant revenue from disruptive innovations or technologies in the future. A disruptive innovation or technology may constitute a large portion of a company's overall business. As a result, the success of a disruptive innovation or technology may materially affect the value of the equity securities issued by the company.

Inverse Health Care Sector Risk: The Fund is exposed to companies in the health care sector indirectly which subjects the Fund to the inverse risks associated with such companies. The health care sector may benefit from government regulations and government health care programs, steady or increasing reimbursement for medical expenses, stability or reductions in the cost of medical products and services, and product liability claims, among other factors. In addition, the sector is driven by a consistent demand for healthcare services and products, which may be further amplified by an aging global population and increasing health awareness. Innovations in medical technology, treatments, and pharmaceuticals may lead to new product lines and services, potentially boosting company revenues and share price performance. Additionally, healthcare is somewhat insulated from economic downturns because medical care is a necessity rather than a luxury, leading to stable revenue streams. Government and private investment in healthcare, along with supportive regulations, can also contribute to the sector's growth. Additionally, strategic partnerships, mergers, and acquisitions within the industry can lead to enhanced research capabilities and accelerated growth, which may result in high growth potential. These combined factors can lead to robust performance for healthcare companies' share prices, which, in turn, would hurt the Fund's performance.

- *Inverse Biotechnology Company Risk*: Biotechnology stocks may perform well due to the sector's strong potential for innovation and breakthroughs in medicine. Biotechnology firms are often at the forefront of developing novel therapies, drugs, and medical technologies, addressing unmet medical needs and creating significant value when successful. Moreover, biotechnology companies often benefit from robust patent protections, providing them with a competitive edge and potential revenue streams.

- *Inverse Pharmaceutical Company Risk*: Pharmaceutical company stocks may perform well due to the essential and inelastic demand for their products, as medications and treatments may be crucial for health and well-being. These companies may have strong pipelines of drugs in various stages of development, offering the potential for substantial revenues upon successful approval and market entry. Additionally, their global reach and diversification across therapeutic areas provide resilience against market volatility.

Inverse Information Technology Sector Risk: The Fund is exposed to companies in the information technology sector indirectly which subjects the Fund to the inverse risks associated with such companies. The information technology sector may experience robust performance, due to its pivotal role in the ongoing digital transformation in various industries. The sector's prospects may be buoyed by rapid technological innovation, escalating global internet penetration, and an augmented reliance on cloud computing and data analytics.

Inverse Internet Companies Risk: Internet entities may prove well-positioned to capitalize from a continued growth in global internet adoption, and a significant migration of services and products to digital platforms. These entities often leverage network effects, where the incremental value of their services escalates with user proliferation, fostering strong user base expansion and the potential for material profit margins. Moreover, the extensive data troves they amass may enable precision-targeted advertising and service offerings, which may generate strong revenue streams.

Inverse Semiconductor Companies Risk: The semiconductor industry may gain from escalating demand for electronic devices and the burgeoning proliferation of cutting-edge technologies such as 5G, artificial intelligence, and the Internet of Things (IoT). Semiconductors, being the primary components of electronic devices, will likely prove indispensable for ongoing technological innovation. Despite susceptibility to cyclical market dynamics, the industry's long-term outlook appears bullish, propelled by the continued pursuit of more sophisticated and potent semiconductor solutions across a multitude of sectors.

Inverse Software Companies Risk: Software companies appear strategically positioned for growth, driven by demand for digital solutions across other industries. The transition towards subscription-based models (Software as a Service - SaaS) may provide a consistent revenue influx and fortify customer retention. These companies may benefit from substantial scalability, enabling user base augmentation with minimal incremental costs. Moreover, continued innovation and the development of specialized solutions tailored to diverse industry-specific requisites may present ample opportunities for growth and market penetration.

NVDA Price Appreciation Risk. The YieldMax™ Short NVDA Option Income Strategy ETF purchases and sells call and put option contracts that are based on the share price of NVDA common stock (the "Underlying Security"). This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund's indirect inverse exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security's share price **increases**. **If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses**. The Fund may also be subject to the following risks:

Indirect Investment in NVDA Risk. Nvidia Corporation is not affiliated with the Trust, the Fund, the Adviser, the Sub-Adviser, or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of Nvidia Corporation but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be adversely impacted by increases in the share price of the Underlying Security.

Underlying Security Trading Risk. The trading price of the Underlying Security may become less volatile over time, which could have an adverse impact on the Fund's performance. The Fund's synthetic covered put strategy is designed to benefit from significant price fluctuations in the Underlying Security. However, if the Underlying Security experiences reduced volatility, it may lead to a decrease in the Fund's potential returns.

Historically, the Underlying Security's shares have exhibited substantial price swings, but there is a possibility that market conditions, investor sentiment, or other factors may contribute to decreased volatility in the future. Such reduced volatility could limit the opportunities for the Fund to profit from its credit spread positions, as the strategy relies on price differentials between options with varying strike prices.

It's important to note that the Fund's performance is closely tied to the dynamics of the Underlying Security's share price. As such, any significant reduction in the volatility of the Underlying Security's share price may present challenges for the Fund's synthetic covered put strategy and may affect its ability to achieve its investment objectives. Investors should consider this potential risk when evaluating their investment in the Fund.

NVDA Good Performance Risk. Nvidia Corporation may meet or exceed its publicly announced expectations or guidelines regarding its business, which could potentially lead to a rise in the price of the Underlying Security. Nvidia Corporation regularly provides guidance concerning its anticipated financial and business performance, including sales and production projections, future revenues, gross margins, profitability, and cash flows. However, forecasting future events and identifying key factors affecting business conditions inherently involves uncertainty. Nvidia Corporation's guidance may ultimately prove accurate or may prove underestimated, as it relies on assumptions such as global and local economic conditions, anticipated production and sales volumes, average sales prices, supplier and commodity costs, and planned cost reductions. If Nvidia Corporation's guidance is accurate or varies positively from actual results, NVDA's share price could increase significantly and, as a result, the Fund may suffer significant losses.

NVDA is a leader in the semiconductor industry, and may be well-positioned for sustained performance, driven by its strong market share in graphics processing units (GPUs) and newer ventures in artificial intelligence (AI) and autonomous driving. As the global economy becomes increasingly digitized, NVDA's GPUs may remain integral for high-performance computing, gaming, and data centers, sectors, which may continue to experience solid growth. NVDA's foray into AI, with its comprehensive ecosystem and hardware suited for machine learning workloads, may place it at the nexus of an industry poised for substantial growth. Additionally, its strategic partnerships and advancements in the autonomous vehicle space may positively augment its diversified portfolio. With its R&D, strong intellectual property, and strategic acquisitions, Nvidia may capitalize on an expanding demand across these sectors.

Inverse Semiconductor Companies Risk: The semiconductor industry may gain from escalating demand for electronic devices and the burgeoning proliferation of cutting-edge technologies such as 5G, artificial intelligence, and the Internet of Things (IoT). Semiconductors, being the primary components of electronic devices, will likely prove indispensable for ongoing technological innovation. Despite susceptibility to cyclical market dynamics, the industry's long-term outlook appears bullish, propelled by the continued pursuit of more sophisticated and potent semiconductor solutions across a multitude of sectors.

COIN Price Appreciation Risk. The YieldMax™ Short COIN Option Income Strategy ETF purchases and sells call and put option contracts that are based on the share price of COIN common stock (the "Underlying Security"). This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund's indirect inverse exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security's share price **increases**. **If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses**. The Fund may also be subject to the following risks:

Indirect Investment in COIN Risk. Coinbase Global, Inc. is not affiliated with the Trust, the Fund, the Adviser, the Sub-Adviser, or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of Coinbase Global, Inc. but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be adversely impacted by increases in the share price of the Underlying Security.

Underlying Security Trading Risk. The trading price of the Underlying Security may become less volatile over time, which could have an adverse impact on the Fund's performance. The Fund's synthetic covered put strategy is designed to benefit from significant price fluctuations in the Underlying Security. However, if the Underlying Security experiences reduced volatility, it may lead to a decrease in the Fund's potential returns.

Historically, the Underlying Security's shares have exhibited substantial price swings, but there is a possibility that market conditions, investor sentiment, or other factors may contribute to decreased volatility in the future. Such reduced volatility could limit the opportunities for the Fund to profit from its credit spread positions, as the strategy relies on price differentials between options with varying strike prices.

It's important to note that the Fund's performance is closely tied to the dynamics of the Underlying Security's share price. As such, any significant reduction in the volatility of the Underlying Security's share price may present challenges for the Fund's synthetic covered put strategy and may affect its ability to achieve its investment objectives. Investors should consider this potential risk when evaluating their investment in the Fund.

COIN Good Performance Risk. Coinbase Global, Inc. may meet or exceed its publicly announced expectations or guidelines regarding its business, which could potentially lead to a rise in the price of the Underlying Security. Coinbase Global, Inc. regularly provides guidance concerning its anticipated financial and business performance, including sales and production projections, future revenues, gross margins, profitability, and cash flows. However, forecasting future events and identifying key factors affecting business conditions inherently involves uncertainty. Coinbase Global, Inc.'s guidance may ultimately prove accurate or may prove underestimated, as it relies on assumptions such as global and local economic conditions, anticipated production and sales volumes, average sales prices, supplier and commodity costs, and planned cost reductions. If

Coinbase Global, Inc.'s guidance is accurate or varies positively from actual results, COIN's share price could increase significantly and, as a result, the Fund may suffer significant losses.

Inverse Digital Assets Sector Risk: The digital assets sector encapsulates a wide array of digital currencies, tokens, and other forms of digital value representation, including non-fungible tokens (NFTs). Digital assets have the potential to redefine asset ownership, transferability, and accessibility, leveraging the principles of decentralization and blockchain technology. The sector may experience substantial growth, especially if mainstream acceptance and institutional interest continues or accelerates. Digital assets offer diversification benefits, given their low correlation with traditional asset classes, which could lead to their inclusion in a broader range of investment portfolios. Moreover, the progressive regulatory clarity and the development of sophisticated trading, custody, and risk management solutions are factors that could foster the sector's growth. Further, a number of bitcoin-focused ETFs (e.g., ETFs that invest in spot bitcoin) have recently commenced operations. These bitcoin-focused ETFs may similarly foster the sector's growth, which could significantly increase the share price of COIN's common stock.

Inverse Financials Sector Risk: The financials sector, encompassing banks, insurance companies, and diversified financial services, may experience growth, driven by a combination of macroeconomic factors and technological innovation. As interest rates rise, banks stand to benefit from widening net interest margins, improving profitability. Insurers may see enhanced investment income as yields increase, bolstering their financial strength. Moreover, the sector is undergoing a technological transformation, with the adoption of digital banking, fintech innovations, and data analytics enhancing operational efficiencies, customer engagement, and risk management capabilities. This digital evolution may unlock new revenue streams and improve competitive positioning.

Inverse Blockchain Sector Risk: The blockchain sector represents a frontier of technological innovation, underpinning not only cryptocurrencies but a spectrum of applications across industries. Its intrinsic attributes of immutability, transparency, and efficiency may make it a compelling foundation for solutions in supply chain management, identity verification, and beyond. If more enterprises and governments recognize its potential to streamline operations and reduce costs, the adoption of blockchain technology may accelerate. The sector may also benefit from the growing interest in decentralized finance (DeFi) and the tokenization of assets, which expand the use cases for blockchain. Investments in companies that develop, implement, or adopt blockchain technology could thus be well-positioned to capitalize on the sector's growth, as it moves from experimental applications to mainstream adoption.

AAPL Price Appreciation Risk. The YieldMax™ Short AAPL Option Income Strategy ETF purchases and sells call and put option contracts that are based on the share price of AAPL common stock (the "Underlying Security"). This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund's indirect inverse exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security's share price **increases**. **If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses**. The Fund may also be subject to the following risks:

Indirect Investment in AAPL Risk. Apple Inc. is not affiliated with the Trust, the Fund, the Adviser, the Sub-Adviser, or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of Apple Inc. but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be adversely impacted by increases in the share price of the Underlying Security.

Underlying Security Trading Risk. The trading price of the Underlying Security may become less volatile over time, which could have an adverse impact on the Fund's performance. The Fund's synthetic covered put strategy is designed to benefit from significant price fluctuations in the Underlying Security. However, if the Underlying Security experiences reduced volatility, it may lead to a decrease in the Fund's potential returns.

Historically, the Underlying Security's shares have exhibited substantial price swings, but there is a possibility that market conditions, investor sentiment, or other factors may contribute to decreased volatility in the future. Such reduced volatility could limit the opportunities for the Fund to profit from its credit spread positions, as the strategy relies on price differentials between options with varying strike prices.

It's important to note that the Fund's performance is closely tied to the dynamics of the Underlying Security's share price. As such, any significant reduction in the volatility of the Underlying Security's share price may present challenges for the Fund's synthetic covered put strategy and may affect its ability to achieve its investment objectives. Investors should consider this potential risk when evaluating their investment in the Fund.

AAPL Good Performance Risk. Apple Inc. may meet or exceed its publicly announced expectations or guidelines regarding its business, which could potentially lead to a rise in the price of the Underlying Security. Apple Inc. regularly provides guidance concerning its anticipated financial and business performance, including sales and production projections, future revenues, gross margins, profitability, and cash flows. However, forecasting future events and identifying key factors affecting business conditions inherently involves uncertainty. Apple Inc.'s guidance may ultimately prove accurate or may prove underestimated, as it relies on assumptions such as global and local economic conditions, anticipated production and sales volumes, average sales prices, supplier and commodity costs, and planned cost reductions. If Apple Inc.'s guidance is accurate or varies positively from actual results, AAPL's share price could increase significantly and, as a result, the Fund may suffer significant losses.

In addition, AAPL currently has strong financial health, innovative prowess, and a strong global brand presence. AAPL has substantial cash reserves and may continue to provide shareholder-friendly policies, such as dividends and share buybacks, which increase the value of the Underlying Security.

Inverse Apple Product Risk: Apple Inc.'s products may possess a strong potential for success, through an integration of innovative technology, design aesthetics, and user-friendly interfaces. AAPL has a loyal customer base, that is often eager to adopt the latest iterations of its product offerings. The brand's ecosystem, characterized by interconnectivity between devices and services, enhances user retention and may promote a higher lifetime value per customer. AAPL's offers diversified product lines, including wearables and services, has broadened its revenue streams. These expansions, coupled with AAPL's push into subscription services, may bolster its capacity to generate stable, recurring revenue.

Counterparty Risk. Each Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, a Fund's counterparty is a clearing house rather than a bank or broker. Since the Funds are not members of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Funds will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, a Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by a Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of a Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of a Fund might not be fully protected in the event of the clearing member's bankruptcy, as a Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. Each Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Funds as they seek to hold options contracts on a single security, and not a broader range of options contracts, which may limited the number of clearing members that are willing to transact on the Funds' behalf. If a clearing member defaults a Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If a Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Derivatives Risk. The Funds' derivative investments have risks, including the imperfect inverse correlation between the value of such instruments and the underlying assets; the loss of principal, including the potential loss of amounts greater than the initial amount invested in the derivative instrument; the possible default of the other party to the transaction; and illiquidity of the derivative investments. Use of derivatives could also result in a loss if the counterparty to the transaction does not perform as promised, including because of such counterparty's bankruptcy or insolvency. This risk may be greater during volatile market conditions. Other risks include the inability to close out a position because the trading market becomes illiquid (particularly in the OTC markets) or the availability of counterparties becomes limited for a period of time. In addition, the presence of speculators in a particular market could lead to price distortions.

Certain of the Funds' transactions in derivatives could also affect the amount, timing, and character of distributions to shareholders, which may result in a Fund realizing more short-term capital gain and ordinary income subject to tax at ordinary income tax rates than it would if it did not engage in such transactions, which may adversely impact such Fund's after-tax returns.

In addition, each Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For each of the Funds, the value of the options contracts in which the Fund invests are substantially influenced by the value of the applicable Underlying Security. The Funds may experience substantial downside from specific option positions and certain option positions held by a Fund may expire worthless. The options held by the Funds are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly moves with the inverse of the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate at the underlying instrument. There may at times be an imperfect inverse correlation between the movement in values options contracts and the reference asset, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Funds will be determined based on market quotations or other recognized pricing methods. Additionally, as each Fund intends to continuously maintain its synthetic covered put strategy on the applicable Underlying Security through the use of options contracts, as the options contracts it holds are traded, exercised or expire, it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, a Fund may experience losses.

Distribution Risk. As part of the Funds' investment objectives, the Funds seek to provide current monthly income. There is no assurance that the Funds will make a distribution in any given month. If a Fund makes distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

ETF Risk.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Funds have a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. Each Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, a Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, a Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause a Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, a Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on a Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of a Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as the Exchange, and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. This risk may be greater for the Funds as they seek to have exposure to a single reference security as opposed to a more diverse portfolio like a traditional pooled investment. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of a Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at a market price that may be below, at or above a Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of a Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that reference a single security, such as any Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, a Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Funds may actively and frequently trade all or a significant portion of the securities in its portfolio. A high portfolio turnover rate increases transaction costs, which may increase a Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Funds due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Funds, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater to the Funds as they will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If a Fund is forced to sell an illiquid security at an unfavorable time or price, such Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent a Fund from limiting losses, realizing gains or achieving a high correlation with the applicable Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Funds.

Money Market Instrument Risk. The Funds may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

NAV Erosion Risk Due to Distributions. If a Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions, if any, by a Fund may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

New Fund Risk. Each Fund is recently organized with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions. There can be no assurance that the Funds will grow to or maintain an economically viable size.

Non-Diversification Risk. Because each Fund is "non-diversified," a Fund may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause a Fund's overall value to decline to a greater degree than if such Fund held a more diversified portfolio. This may increase the Fund's volatility and have a greater impact on such Fund's performance.

Operational Risk. Each Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Funds' service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. Each Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect a Fund's ability to meet its investment objective. Although the Funds and the Funds' investment advisor seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Price Participation Risk. Each Fund employs an investment strategy that includes the sale of put option contracts, which limits the degree to which such Fund will participate in the inverse of decreases in value experienced by the applicable Underlying Security over the Put Period. This means that if the Underlying Security experiences a decrease in value below the strike price of the sold put options during a Put Period, the applicable Fund will likely not experience the inverse (increase) to the same extent and may significantly underperform the inverse of such Underlying Security over the Put Period. Additionally, because each Fund is limited in the degree to which it will participate in decreases in value experienced by the Underlying Security over each Put Period but has significant exposure to any increases in value experienced by the Underlying Security over the Put Period, the NAV of the Fund may decrease over any given time period. Each Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the inverse of the performance of the Underlying Security. The degree of participation in Underlying Security gains a Fund will experience will depend on prevailing market conditions, especially market volatility, at the time such Fund enters into the sold put option contracts and will vary from Put Period to Put Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Put Period, the value of the options contracts, and therefore a Fund's NAV, will change. However, it is not expected for a Fund's NAV to directly inversely correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the option contract's expiration date affects the impact of the potential options contract income on a Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to a Fund's NAV, the Funds generally anticipate that the rate of change in a Fund's NAV will be different than from the inverse in changes experienced by the Underlying Security.

Purchased OTM Call Options Risk. Each Fund's strategy is subject to potential losses if the applicable Underlying Security shares increase in value, which may not be offset by the purchase of out-of-the-money (OTM) call options. Each Fund purchases OTM calls to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the applicable Underlying Security if it appreciates significantly in value. However, the OTM call options will cap the Fund's losses only to the extent that the share price of the applicable Underlying Security increases to a price that is at or above the strike price of the purchased OTM call options. Any increase in the share price of the applicable Underlying Security to a price that is below the strike price of the purchased OTM call options will result in a corresponding loss for the Fund. For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund's losses will be capped at approximately 70%. Notwithstanding the foregoing, if the OTM call options have a strike price that is approximately 100% above the then-current share price of the Underlying Security at the time of the call option purchase, and the share price of the Underlying Security increases by at least 100% during the term of the purchased OTM call options, the Fund will lose all its value. Lastly, each Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund's value and/or any income otherwise generated by the Fund's investment strategy.

Put Writing Strategy Risk. The path dependency (*i.e.*, the continued use) of a Fund's put writing strategy will impact the extent that a Fund participates in the inverse of the negative price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold put options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money put options having a one-month term, the Fund's participation in the inverse of negative price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (*i.e.*, 5 months x 7%) of the inverse of negative price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security's share price has decreased by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both a Fund's participation in the inverse of the negative price returns of an Underlying Security and its returns will depend not only on the share price of the Underlying Security but also on the path that such share price takes over time.

Recent Market Events Risk. U.S. and international markets have experienced significant periods of volatility in recent years and months due to a number of economic, political and global macro factors including the impact of COVID-19 as a global pandemic, which has resulted in a public health crisis, disruptions to business operations and supply chains, stress on the global healthcare system, growth concerns in the U.S. and overseas, staffing shortages and the inability to meet consumer demand, and widespread concern and uncertainty. The global recovery from COVID-19 is proceeding at slower than expected rates due to the emergence of variant strains and may last for an extended period of time. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in a Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses an individual security (the Underlying Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Funds intend to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, each Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If a Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, each Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If a Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If a Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Funds may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

PORTFOLIO HOLDINGS

Information about each Fund's daily portfolio holdings will be available on the Funds' website at www.yieldmaxetfs.com.

A complete description of each Fund's policies and procedures with respect to the disclosure of a Fund's portfolio holdings is available in the Fund's SAI.

MANAGEMENT

Investment Adviser

Tidal Investments LLC ("Tidal" or the "Adviser"), located at 234 West Florida Street, Suite 203, Milwaukee, Wisconsin 53204, is an SEC registered investment adviser and a Delaware limited liability company. Tidal was founded in March 2012 and is dedicated to understanding, researching and managing assets within the expanding ETF universe. As of January 31, 2024, Tidal had assets under management of approximately $13.17 billion and served as the investment adviser or sub-adviser for 167 registered funds.

Tidal serves as investment adviser to the Funds and has overall responsibility for the general management and administration of the Funds pursuant to an investment advisory agreement with the Trust, on behalf of each Fund (the "Advisory Agreement"). The Adviser also arranges for sub-advisory, transfer agency, custody, fund administration, and all other related services necessary for the Fund to operate. For the services provided to the Funds, each Fund pays the Adviser a unified management fee of 0.99%, which is calculated daily and paid monthly, at an annual rate based on such Fund's average daily net assets.

Under the Advisory Agreement, in exchange for a single unitary management fee from the Fund, the Adviser has agreed to pay all expenses incurred by such Fund except for interest charges on any borrowings, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, extraordinary expenses, distribution fees and expenses paid by a Fund under any distribution plan adopted pursuant to Rule 12b-1 under the 1940 Act, and the unitary management fee payable to the Adviser (collectively, the "Excluded Expenses").

Investment Sub-Adviser

ZEGA Financial, LLC, a Nebraska limited liability company, located at 3801 PGA Blvd, Palm Beach Gardens, FL 33410, serves as investment sub-adviser to the Funds pursuant to a sub-advisory agreement between the Adviser and the Sub-Adviser (the "Sub-Advisory Agreement"). ZEGA is responsible for the day-to-day management of the Funds' portfolios, including determining the securities purchased and sold by each Fund and trading portfolio securities for each Fund, subject to the supervision of the Adviser and the Board. ZEGA is an independent investment advisor founded in 2011 offering discretionary and non-discretionary portfolio management services to separately managed accounts. For its services, ZEGA is paid a fee by the Adviser, which fee is calculated daily and paid monthly, at an annual rate of 0.09% of each Fund's average daily net assets.

The Sub-Adviser has agreed to assume a portion of the Adviser's obligation to pay all expenses incurred by one or more of the Funds, except for the sub-advisory fee payable to the Sub-Adviser and Excluded Expenses. Such expenses incurred by a Fund and paid by the Sub-Adviser include fees charged by Tidal ETF Services, LLC, the Fund's administrator and an affiliate of the Adviser. In addition to its sub-advisory fee, the Sub-Adviser may receive from the Adviser, in certain circumstances, a portion of the Adviser's management fee in recognition of the risk it assumes in incurring the obligation to pay fund expenses as described above. As of January 31, 2024, the Sub-Adviser had approximately $2,684 million in assets under management.

Agreements

A discussion regarding the basis for the Board's approval of each Fund's Advisory Agreement and Sub-Advisory Agreement will be available in the April 30, 2024 semi-annual report to shareholders.

Portfolio Managers

The following individuals (each, a "Portfolio Manager") have served as portfolio managers of each Fund since inception in 2024. Mr. Brokaw and Mr. Pestrichelli are jointly and primarily responsible for the day-to-day management of each Fund, and Ms. Duan and Mr. Ragauss oversee trading and execution for the Fund.

Mick Brokaw, Portfolio Manager for the Sub-Adviser

Mr. Brokaw joined the Sub-Adviser in 2015 and serves as the Managing Director for the Sub-Adviser. Mr. Brokaw has over 25 years of experience in the financial markets, with the majority of his experience related to trading and trading platforms. Mr. Brokaw has a Bachelor of Finance from the University of Nebraska, Lincoln.

Jay Pestrichelli, Portfolio Manager for the Sub-Adviser

Mr. Pestrichelli co-founded the Sub-Adviser in 2011 and is Chief Executive Officer. Mr. Pestrichelli has over 20 years of experience in the financial markets. Mr. Pestrichelli has led the development and execution of the firm's investment strategies since its inception in 2011. He is also the author of the best-selling book "Buy & Hedge: The Five Iron Rules for Investing Over the Long Term." Prior to founding the Sub-Adviser in 2011, Mr. Pestrichelli spent 12 years managing and growing the online trading business for TD Ameritrade from 1999 to 2010. Mr. Pestrichelli has a Bachelor degree in Behavioral Science from Concordia College.

Michael Venuto, Chief Investment Officer for the Adviser

Mr. Venuto is a co-founder and has been the Chief Investment Officer of the Adviser since 2012. Mr. Venuto is an ETF industry veteran with over a decade of experience in the design and implementation of ETF-based investment strategies. Previously, he was Head of Investments at Global X Funds where he provided portfolio optimization services to institutional clients. Before that, he was Senior Vice President at Horizon Kinetics where his responsibilities included new business development, investment strategy and client and strategic initiatives.

Christopher P. Mullen, Portfolio Manager for the Adviser

Christopher P. Mullen serves as Portfolio Manager at the Adviser, having joined the firm in January 2024. From September 2019 to December 2023, he was a Portfolio Manager at Vest Financial LLC, where he managed exchange-traded funds, mutual funds and retirement fund portfolios. Mr. Mullen previously served as a Senior Portfolio Analyst at ProShares Advisors LLC from September 2016 until September 2019. Prior to that, Mr. Mullen served as associate portfolio manager at USCF Investments LLC from February 2013 to September 2016. Mr. Mullen received a Master of Business Administration from the University of Maryland. He also holds a dual bachelor's degree in global politics and history from Marquette University.

The Funds' SAI provides additional information about each portfolio manager's compensation structure, other accounts that each portfolio manager manages, and each portfolio manager's ownership of Shares.

Fund Supporters

The Adviser, Tidal ETF Services LLC (an affiliate of the Adviser and the Funds' administrator), ZEGA, Lucania Investments LLC ("Lucania"), and Level ETF Ventures LLC ("Level," and together with the Adviser, ZEGA and Lucania, the "Supporters" and each a "Supporter") have entered into a fund support agreement pursuant to which each Supporter has agreed to provide financial support (as described below) to the Funds. Every month, the unitary management fees for each Fund are calculated and paid to the Adviser, and the Adviser retains a portion of the unitary management fees from each Fund. In return for its financial support for the Funds, the Adviser has agreed to pay each Supporter a portion of any remaining profits generated by the unitary management fees for the Funds. If the aggregate amount of the unitary management fees for the Funds exceeds the aggregate of the Funds' operating expenses and the Adviser-retained amounts, that excess amount is considered "remaining profit." In that case, the Adviser will pay a portion of the remaining profits to the Supporters. Further, if the aggregate amount of the unitary management fees for the Funds is less than the aggregate of Funds' operating expenses and the Adviser-retained amounts, each Supporter is obligated to reimburse the Adviser for a portion of the shortfall.

HOW TO BUY AND SELL SHARES

Each Fund issues and redeems Shares only in Creation Units at the NAV per share next determined after receipt of an order from an AP. Only APs may acquire Shares directly from a Fund, and only APs may tender their Shares for redemption directly to the Funds, at NAV. APs must be a member or participant of a clearing agency registered with the SEC and must execute a Participant Agreement that has been agreed to by the Distributor (defined below), and that has been accepted by a Fund's transfer agent, with respect to purchases and redemptions of Creation Units. Once created, Shares trade in the secondary market in quantities less than a Creation Unit.

In order to purchase Creation Units of a Fund, an AP must generally deposit a designated portfolio of equity securities (the "Deposit Securities") and/or a designated amount of U.S. cash. Purchases and redemptions of Creation Units primarily with cash, rather than through in-kind delivery of portfolio securities, may cause the Funds to incur certain costs. These costs could include brokerage costs or taxable gains or losses that it might not have incurred if it had made redemption in-kind. These costs could be imposed on a Fund, and thus decrease the Fund's NAV, to the extent that the costs are not offset by a transaction fee payable by an AP. Most investors buy and sell Shares in secondary market transactions through brokers. Individual Shares are listed for trading on the secondary market on the Exchange and can be bought and sold throughout the trading day like other publicly traded securities.

When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offer price in the secondary market on each leg of a round trip (purchase and sale) transaction. In addition, because secondary market transactions occur at market prices, you may pay more than NAV when you buy Shares, and receive less than NAV when you sell those Shares.

Book Entry

Shares are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company ("DTC") or its nominee is the record owner of all outstanding Shares.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. DTC's participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book-entry or "street name" through your brokerage account.

Frequent Purchases and Redemptions of Shares

None of the Funds imposes any restrictions on the frequency of purchases and redemptions of Shares. In determining not to approve a written, established policy, the Board evaluated the risks of market timing activities by a Fund's shareholders. Purchases and redemptions by APs, who are the only parties that may purchase or redeem Shares directly with a Fund, are an essential part of the ETF process and help keep Share trading prices in line with the NAV. As such, the Funds accommodate frequent purchases and redemptions by APs. However, the Board has also determined that frequent purchases and redemptions for cash may increase tracking error and portfolio transaction costs and may lead to the realization of capital gains. To minimize these potential consequences of frequent purchases and redemptions, each Fund employs fair value pricing and may impose transaction fees on purchases and redemptions of Creation Units to cover the custodial and other costs incurred by such Fund in effecting trades. In addition, the Funds and the Adviser reserve the right to reject any purchase order at any time.

Determination of Net Asset Value

Each Fund's NAV is calculated as of the scheduled close of regular trading on the New York Stock Exchange ("NYSE"), generally 4:00 p.m. Eastern Time, each day the NYSE is open for regular business. The NAV for the Funds is calculated by dividing such Fund's net assets by its Shares outstanding.

In calculating its NAV, each Fund generally value its assets on the basis of market quotations, last sale prices, or estimates of value furnished by a pricing service or brokers who make markets in such instruments. If such information is not available for a security or other asset held by a Fund or is determined to be unreliable, the security or other asset will be valued at fair value estimates under guidelines established by the Board (as described below).

Fair Value Pricing

The Board has designated the Adviser as the "valuation designee" for the Fund under Rule 2a-5 of the 1940 Act, subject to its oversight. The Adviser has adopted procedures and methodologies, which have been approved by the Board to fair value Fund investments whose market prices are not "readily available" or are deemed to be unreliable. For example, such circumstances may arise when: (i) an investment has been delisted or has had its trading halted or suspended; (ii) an investment's primary pricing source is unable or unwilling to provide a price; (iii) an investment's primary trading market is closed during regular market hours; or (iv) an investment's value is materially affected by events occurring after the close of the investment's primary trading market. Generally, when fair valuing an investment, the Adviser will take into account all reasonably available information that may be relevant to a particular valuation including, but not limited to, fundamental analytical data regarding the issuer, information relating to the issuer's business, recent trades or offers of the investment, general and/or specific market conditions, and the specific facts giving rise to the need to fair value the investment. Fair value determinations are made in good faith and in accordance with the fair value methodologies included in the Adviser-adopted valuation procedures. The Adviser will fair value Fund investments whose market prices are not "readily available" or are deemed to be unreliable. Due to the subjective and variable nature of fair value pricing, there can be no assurance that the Adviser will be able to obtain the fair value assigned to the investment upon the sale of such investment.

Delivery of Shareholder Documents – Householding

Householding is an option available to certain investors of the Funds. Householding is a method of delivery, based on the preference of the individual investor, in which a single copy of certain shareholder documents can be delivered to investors who share the same address, even if their accounts are registered under different names. Householding for the Funds is available through certain broker-dealers. If you are interested in enrolling in householding and receiving a single copy of prospectuses and other shareholder documents, please contact your broker-dealer. If you are currently enrolled in householding and wish to change your householding status, please contact your broker-dealer.

DIVIDENDS, DISTRIBUTIONS, AND TAXES

Dividends and Distributions

The Funds intend to pay out dividends and interest income, if any, monthly, and distribute any net realized capital gains to its shareholders at least annually.

The Funds will declare and pay income and capital gain distributions, if any, in cash. Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available. Your broker is responsible for distributing the income and capital gain distributions to you.

Taxes

The following discussion is a summary of some important U.S. federal income tax considerations generally applicable to investments in the Funds. Your investment in a Fund may have other tax implications. Please consult your tax advisor about the tax consequences of an investment in Shares, including the possible application of foreign, state, and local tax laws.

Each Fund intends to qualify each year for treatment as a regulated investment company (a "RIC") under the Internal Revenue Code of 1986, as amended. If it meets certain minimum distribution requirements, a RIC is not subject to tax at the fund level on income and gains from investments that are timely distributed to shareholders. However, a Fund's failure to qualify as a RIC or to meet minimum distribution requirements would result (if certain relief provisions were not available) in fund-level taxation and, consequently, a reduction in income available for distribution to shareholders.

Unless your investment in Shares is made through a tax-exempt entity or tax-advantaged account, such as an IRA plan, you need to be aware of the possible tax consequences when a Fund makes distributions, when you sell your Shares listed on the Exchange, and when you purchase or redeem Creation Units (institutional investors only).

The following general discussion of certain U.S. federal income tax consequences is based on provisions of the Code and the regulations issued thereunder as in effect on the date of this SAI. New legislation, as well as administrative changes or court decisions, may significantly change the conclusions expressed herein, and may have a retroactive effect with respect to the transactions contemplated herein.

Taxes on Distributions. Each Fund intends to pay out dividends and interest income, if any, monthly, and distribute any net realized capital gains to its shareholders at least annually. For federal income tax purposes, distributions of net investment income are generally taxable as ordinary income or qualified dividend income. Taxes on distributions of net capital gains (if any) are determined by how long the Fund owned the investments that generated them, rather than how long a shareholder has owned their Shares. Sales of assets held by a Fund for more than one year generally result in long-term capital gains and losses, and sales of assets held by such Fund for one year or less generally result in short-term capital gains and losses. Distributions of a Fund's net capital gain (the excess of net long-term capital gains over net short-term capital losses) that are reported by such Fund as capital gain dividends ("Capital Gain Dividends") will be taxable as long-term capital gains. Distributions of short-term capital gain will generally be taxable as ordinary income. Dividends and distributions are generally taxable to you whether you receive them in cash or reinvest them in additional Shares.

Distributions reported by a Fund as "qualified dividend income" are generally taxed to non-corporate shareholders at rates applicable to long-term capital gains, provided certain holding period and other requirements are met. "Qualified dividend income" generally is income derived from dividends paid by U.S. corporations or certain foreign corporations that are either incorporated in a U.S. possession or eligible for tax benefits under certain U.S. income tax treaties. In addition, dividends that a Fund receives in respect of stock of certain foreign corporations may be qualified dividend income if that stock is readily tradable on an established U.S. securities market. Corporate shareholders may be entitled to a dividends-received deduction for the portion of dividends they receive from a Fund that are attributable to dividends received by such Fund from U.S. corporations, subject to certain limitations.

Shortly after the close of each calendar year, you will be informed of the character of any distributions received from a Fund.

In addition to the federal income tax, certain individuals, trusts, and estates may be subject to a Net Investment Income ("NII") tax of 3.8%. The NII tax is imposed on the lesser of: (i) a taxpayer's investment income, net of deductions properly allocable to such income; or (ii) the amount by which such taxpayer's modified adjusted gross income exceeds certain thresholds ($250,000 for married individuals filing jointly, $200,000 for unmarried individuals and $125,000 for married individuals filing separately). Each Fund's distributions are includable in a shareholder's investment income for purposes of this NII tax. In addition, any capital gain realized by a shareholder upon a sale or redemption of shares of a Fund is includable in such shareholder's investment income for purposes of this NII tax.

In general, your distributions are subject to federal income tax for the year in which they are paid. Certain distributions paid in January, however, may be treated as paid on December 31 of the prior year. Distributions are generally taxable even if they are paid from income or gains earned by a Fund before your investment (and thus were included in the Shares' NAV when you purchased your Shares).

You may wish to avoid investing in a Fund shortly before a dividend or other distribution, because such a distribution will generally be taxable even though it may economically represent a return of a portion of your investment.

If you are neither a resident nor a citizen of the United States or if you are a foreign entity, distributions (other than Capital Gain Dividends) paid to you by a Fund will generally be subject to a U.S. withholding tax at the rate of 30%, unless a lower treaty rate applies. The Funds may, under certain circumstances, report all or a portion of a dividend as an "interest-related dividend" or a "short-term capital gain dividend," which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met.

Under the Foreign Account Tax Compliance Act ("FATCA"), the Funds may be required to withhold a generally nonrefundable 30% tax on distributions of net investment income paid to (a) certain "foreign financial institutions" unless such foreign financial institution agrees to verify, monitor, and report to the IRS the identity of certain of its account holders, among other items (or unless such entity is otherwise deemed compliant under the terms of an intergovernmental agreement between the United States and the foreign financial institution's country of residence), and (b) certain "non-financial foreign entities" unless such entity certifies to the Fund that it does not have any substantial U.S. owners or provides the name, address, and taxpayer identification number of each substantial U.S. owner, among other items. This FATCA withholding tax could also affect a Fund's return on its investments in foreign securities or affect a shareholder's return if the shareholder holds its Fund shares through a foreign intermediary. You are urged to consult your tax adviser regarding the application of this FATCA withholding tax to your investment in a Fund and the potential certification, compliance, due diligence, reporting, and withholding obligations to which you may become subject in order to avoid this withholding tax.

For foreign shareholders to qualify for an exemption from backup withholding, described above, the foreign shareholder must comply with special certification and filing requirements. Foreign shareholders in a Fund should consult their tax advisors in this regard.

Taxes When Shares are Sold on the Exchange

Any capital gain or loss realized upon a sale of Shares generally is treated as a long-term capital gain or loss if Shares have been held for more than one year and as a short-term capital gain or loss if Shares have been held for one year or less. However, any capital loss on a sale of Shares held for six months or less is treated as long-term capital loss to the extent of Capital Gain Dividends paid with respect to such Shares. Any loss realized on a sale will be disallowed to the extent Shares of a Fund are acquired, including through reinvestment of dividends, within a 61-day period beginning 30 days before and ending 30 days after the sale of substantially identical Shares.

Taxes on Purchases and Redemptions of Creation Units

An AP having the U.S. dollar as its functional currency for U.S. federal income tax purposes who exchanges securities for Creation Units generally recognizes a gain or a loss. The gain or loss will be equal to the difference between the value of the Creation Units at the time of the exchange and the exchanging AP's aggregate basis in the securities delivered plus the amount of any cash paid for the Creation Units. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanging AP's basis in the Creation Units and the aggregate U.S. dollar market value of the securities received, plus any cash received for such Creation Units. The IRS may assert, however, that a loss that is realized upon an exchange of securities for Creation Units may not be currently deducted under the rules governing "wash sales" (for an AP who does not mark-to-market their holdings) or on the basis that there has been no significant change in economic position. Persons exchanging securities should consult their own tax advisor with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if Shares comprising the Creation Units have been held for more than one year and as a short-term capital gain or loss if such Shares have been held for one year or less.

The Funds may include a payment of cash in addition to, or in place of, the delivery of a basket of securities upon the redemption of Creation Units. The Funds may sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Funds to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, a Fund may be less tax efficient if it includes such a cash payment in the proceeds paid upon the redemption of Creation Units.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Funds. It is not a substitute for personal tax advice. You also may be subject to foreign, state and local tax on Fund distributions and sales of Shares. Consult your personal tax advisor about the potential tax consequences of an investment in Shares under all applicable tax laws. For more information, please see the section entitled "Federal Income Taxes" in the SAI.

DISTRIBUTION

Foreside Fund Services, LLC (the "Distributor"), the Funds' distributor, is a broker-dealer registered with the SEC. The Distributor distributes Creation Units for the Fund on an agency basis and does not maintain a secondary market in Shares. The Distributor has no role in determining the policies of the Funds or the securities that are purchased or sold by the Funds. The Distributor's principal address is Three Canal Plaza, Suite 100, Portland, Maine 04101.

The Board has adopted a Distribution (Rule 12b-1) Plan (the "Plan") pursuant to Rule 12b-1 under the 1940 Act. In accordance with the Plan, each Fund is authorized to pay an amount up to 0.25% of its average daily net assets each year to pay distribution fees for the sale and distribution of its Shares.

No Rule 12b-1 fees are currently paid by the Funds, and there are no plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, because the fees are paid out of assets of the respective Fund on an ongoing basis, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

PREMIUM/DISCOUNT INFORMATION

When available, information regarding how often Shares of the Funds traded on the Exchange at a price above (*i.e.*, at a premium) or below (*i.e.*, at a discount) the NAV of such Fund can be found on the Funds' website at www.yieldmaxetfs.com.

ADDITIONAL NOTICES

Shares are not sponsored, endorsed, or promoted by the Exchange. The Exchange is not responsible for, nor has it participated in the determination of, the timing, prices, or quantities of Shares to be issued, nor in the determination or calculation of the equation by which Shares are redeemable. The Exchange has no obligation or liability to owners of Shares in connection with the administration, marketing, or trading of Shares.

Without limiting any of the foregoing, in no event shall the Exchange have any liability for any lost profits or indirect, punitive, special, or consequential damages even if notified of the possibility thereof.

The Adviser, Sub-Adviser, Lucania, Level and the Funds make no representation or warranty, express or implied, to the owners of Shares or any member of the public regarding the advisability of investing in securities generally or in any Fund particularly.

The Third Amended and Restated Declaration of Trust ("Declaration of Trust") provides a detailed process for the bringing of derivative or direct actions by shareholders in order to permit legitimate inquiries and claims while avoiding the time, expense, distraction, and other harm that can be caused to a Fund or its shareholders as a result of spurious shareholder demands and derivative actions. Prior to bringing a derivative action, a demand by three unrelated shareholders must first be made on a Fund's Trustees. The Declaration of Trust details various information, certifications, undertakings and acknowledgments that must be included in the demand. Following receipt of the demand, the trustees have a period of 90 days, which may be extended by an additional 60 days, to consider the demand. If a majority of the Trustees who are considered independent for the purposes of considering the demand determine that maintaining the suit would not be in the best interests of the Fund, the Trustees are required to reject the demand and the complaining shareholders may not proceed with the derivative action unless the shareholders are able to sustain the burden of proof to a court that the decision of the Trustees not to pursue the requested action was not a good faith exercise of their business judgment on behalf of the Fund. The Declaration of Trust further provides that shareholders owning Shares representing no less than a majority of a Fund's outstanding shares must join in bringing the derivative action. If a demand is rejected, the complaining shareholders will be responsible for the costs and expenses (including attorneys' fees) incurred by the Fund in connection with the consideration of the demand, if a court determines that the demand was made without reasonable cause or for an improper purpose. If a derivative action is brought in violation of the Declaration of Trust, the shareholders bringing the action may be responsible for the Fund's costs, including attorneys' fees, if a court determines that the action was brought without reasonable cause or for an improper purpose. The Declaration of Trust provides that no shareholder may bring a direct action claiming injury as a shareholder of the Trust, or any Fund, where the matters alleged (if true) would give rise to a claim by the Trust or by the Trust on behalf of a Fund, unless the shareholder has suffered an injury distinct from that suffered by the shareholders of the Trust, or the Fund, generally. Under the Declaration of Trust, a shareholder bringing a direct claim must be a shareholder of the Fund with respect to which the direct action is brought at the time of the injury complained of or have acquired the shares afterwards by operation of law from a person who was a shareholder at that time. The Declaration of Trust further provides that a Fund shall be responsible for payment of attorneys' fees and legal expenses incurred by a complaining shareholder only if required by law, and any attorneys' fees that the Fund is obligated to pay shall be calculated using reasonable hourly rates. These provisions do not apply to claims brought under the federal securities laws.

The Declaration of Trust also requires that actions by shareholders against a Fund be brought exclusively in a federal or state court located within the State of Delaware. This provision will not apply to claims brought under the federal securities laws. Limiting shareholders' ability to bring actions only in courts located in Delaware may cause shareholders economic hardship to litigate the action in those courts, including paying for traveling expenses of witnesses and counsel, requiring retaining local counsel, and may limit shareholders' ability to bring a claim in a judicial forum that shareholders find favorable for disputes, which may discourage such actions.

FINANCIAL HIGHLIGHTS

This section would ordinarily include Financial Highlights for the Funds. The Financial Highlights tables are intended to help you understand the performance of each Fund for that Fund's periods of operations. Because the Funds have not yet commenced operations as of the date of this Prospectus, no Financial Highlights are shown.
