YieldMax™ BABA Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of the ADR of Alibaba Group Holding Limited ("BABA" or the "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses (includes dividend, tax and broker expense) ⁽²⁾	0.08%
Total Annual Fund Operating Expenses	1.07%

⁽¹⁾ The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.

⁽²⁾ Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$109	\$340

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. For the fiscal period from August 7, 2024 (commencement of operations) to October 31, 2024, the Fund's portfolio turnover rate was 16% of the average value of its portfolio.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of the ADR of BABA (NYSE: BABA) ("BABA" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to BABA regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of BABA, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of BABA increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of BABA,

- current income from the option premiums, and
- at most times, a limit on the Fund's participation in gains, if any, of the share price returns of BABA.

For more information, see sections "The Fund's Use of Underlying Security Option Contracts," "Synthetic Covered Call Strategy" and "Synthetic Covered Call Spread Strategy" below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security's stock price, the Fund's portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund's strategy will capture only a portion of its potential gains if the Underlying Security's stock price increase in value.**
- **The Fund's strategy is subject to all potential losses if the Underlying Security's stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund's Use of Underlying Security Option Contracts

As part of the Fund's synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® ("FLEX") call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the "strike price").
- If exercised, an option contract obligates the seller to deliver shares (for a sold or "short" call) or buy shares (for a sold or "short" put) of the underlying asset at a specified price (the "strike price").
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section "Fund Portfolio" below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see "Additional Information about the Funds – Exchange Traded Options Portfolio."

The Fund's options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a "synthetic covered call" strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund's synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio (All options are based on the value of the Underlying Security)	Holdings (Investment Terms)	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government. These instruments are used as collateral for the Fund's derivative investments. They will also generate income.	6-month to 2-year maturities
----------------------------------	---	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund's net assets and the market value of the options package is expected to be between 0% and 50% of the Fund's net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to BABA equal to at least 100% of the Fund's total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to BABA.

The Fund is classified as "non-diversified" under the 1940 Act.

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Alibaba Group Holding Limited ("BABA")

BABA is an e-commerce company that operates retail websites and offers programs that enable third-parties to sell products on their websites. BABA is listed on the New York Stock Exchange.

The American Depositary Share of Alibaba Group Holding Limited (BABA) is registered under the Securities Exchange Act of 1933, as amended (the "Exchange Act"). Information provided to or filed with the SEC by BABA pursuant to the Exchange Act can be located by reference to SEC file number 001-36614 through the SEC's website at www.sec.gov. In addition, information regarding BABA may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of BABA or other securities of BABA. The Fund has derived all disclosures contained in this document regarding BABA from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to BABA. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding BABA is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of BABA (and therefore the price of BABA at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning BABA could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of BABA.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH ALIBABA GROUP HOLDING LIMITED.

Due to the Fund's investment strategy, the Fund's investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to BABA. As of the date of the Prospectus, BABA is assigned to the headline retail industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which they appear.

BABA Risk. The Fund invests in options contracts that are based on the value of BABA. This subjects the Fund to certain of the same risks as if it owned shares of BABA, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of BABA, the Fund may also be subject to the following risks:

Indirect Investment in BABA Risk. BABA is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of BABA but will be exposed to the performance of BABA (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

BABA Trading Risk. The trading price of BABA may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of BABA may be traded by short sellers which may put pressure on the supply and demand for the common stock of BABA, further influencing volatility in its market price. Public perception and other factors outside of the control of BABA may additionally impact BABA's stock price due to BABA garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against BABA in the past. While BABA continues to defend such actions, any judgment against BABA, or any future stockholder litigation could result in substantial costs and a diversion of the management of BABA's attention and resources. If BABA trading is halted, trading in Shares of the BABA Fund may be impacted, either temporarily or indefinitely.

BABA Performance Risk. BABA may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of BABA to decline. BABA provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance BABA provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If BABA's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by BABA could decline significantly.

Internet & Direct Marketing Retail Risk. Companies, such as BABA, that operate via the internet or direct marketing (e.g., online consumer services, online retail, travel) segments are subject to fluctuating consumer demand. Unlike traditional brick and mortar retailers, online marketplaces and retailers must assume shipping costs or pass such costs to consumers. Consumer access to price information for the same or similar products may cause companies that operate in the online marketplace, retail and travel segments to reduce profit margins in order to compete. Due to the nature of their business models, companies that operate in the online marketplace, retail, and travel segments may also be subject to heightened cybersecurity risk, including the risk of theft or damage to vital hardware, software, and information systems. The loss or public dissemination of sensitive customer information or other proprietary data may negatively affect the financial performance of such companies to a greater extent than traditional brick and mortar retailers. As a result of such companies being web-based and the fact that they process, store, and transmit large amounts of data, including personal information, for their customers, failure to prevent or mitigate data loss or other security breaches, including breaches of vendors' technology and systems, could expose companies that operate via the internet or direct marketing retail to a risk of loss or misuse of such information, adversely affect their operating results, result in litigation or potential liability, and otherwise harm their businesses.

Business Structural Risks. Investing in BABA, a Cayman Islands holding company, carries several significant risks due to the company's unique business structure and its base of operations primarily in China. Due to restrictions on foreign ownership and investment in China, BABA, like other foreign-incorporated entities operating in China, functions through a Variable Interest Entity structure (VIE) for its internet and other business activities. The VIEs are owned and incorporated by Chinese citizens or entities controlled by them, not BABA itself. Though contractual agreements enable BABA to effectively control the VIEs and realize the economic benefits, investors are essentially purchasing equity securities in a Cayman Islands holding company rather than equity securities issued by BABA's consolidated subsidiaries and the VIE. This structure exposes investors to potential risks and uncertainties, including regulatory changes in China.

In addition to these structural complexities, the company also confronts various operational and legal risks due to its base and primary operations in China. The Chinese government retains significant authority to regulate the business operations of China-based companies like BABA, including their overseas listings and fundraisings. Other challenges include maintaining the

trusted status of BABA's ecosystems, the impact of sustained investment on margins and net income, competition, ability to innovate and adapt, risks related to acquisitions, and expansion of international and cross-border operations. Furthermore, BABA's dependence on Alipay for payment processing and escrow services, its broad exposure to evolving laws and regulations, and the potential misuse or disclosure of data also represent significant business and industry risks.

Holding Foreign Companies Accountable Act (HFCAA) Risks. The HFCAA is a U.S. law enacted in 2020, requiring the SEC to ban trading on all U.S. exchanges of any foreign company for which the Public Company Accounting Oversight Board ("PCAOB") is unable to inspect audit workpapers for three consecutive years, which is a particular threat to Chinese companies as PCAOB inspection of the audit work of foreign accounting firms conflicts with Chinese law and policy. The enactment of the HFCAA and other efforts to increase U.S. regulatory access to audit workpapers could cause investor uncertainty, and the market price of any Chinese securities held by a Fund could be adversely affected. In addition, PCAOB's inability to evaluate the audits and quality control procedures of auditors deprive investors of the transparency and protections provided by such evaluations and may subject such investors to a heightened risk of fraud. In 2022, China regulators entered into an agreement with the PCAOB to facilitate access to the documents required for inspection of audit firms and audit documents with respect to Chinese issuers listed on U.S. exchanges. However, if the PCAOB is unable to inspect a company's auditors for three consecutive years, the issuer's securities would be de-listed from the U.S. exchange on which it trades and the resulting impact could negatively impact a Fund's performance.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a

broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract's expiration date affects the impact of the potential options contract income on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund's NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Foreign Investment Risk. Because the Fund has indirect exposure to the ADR of a foreign company, the Fund may be subject to risks associated with foreign investments.

- *Currency Risk:* Indirect exposure to foreign currencies subjects the Fund to the risk that currencies will decline in value relative to the U.S. dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates and the imposition of currency controls or other political developments in the U.S. or abroad.
- *Depository Receipts Risk:* Investment in ADRs may be less liquid than the underlying shares in their primary trading market.
- *Foreign Market and Trading Risk:* The trading markets for many foreign securities are not as active as U.S. markets and may have less governmental regulation and oversight.
- *Foreign Securities Risk:* Investments in securities of non-U.S. issuers involve certain risks that may not be present with investments in securities of U.S. issuers, such as risk of loss due to foreign currency fluctuations or to political or economic instability, as well as varying regulatory requirements applicable to investments in non-U.S. issuers. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Non-U.S. issuers may also be subject to different regulatory, accounting, auditing, financial reporting and investor protection standards than U.S. issuers.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

Newer Fund Risk. The Fund is a recently organized management investment company with limited operating history. As a result, prospective investors have only a limited track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (the Underlying Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

Information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

YieldMax™ CVNA Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of Carvana Co. ("CVNA" or "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	0.99%

⁽¹⁾ The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.

⁽²⁾ Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of CVNA (NYSE Arca: CVNA) ("CVNA" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to CVNA regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of CVNA, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of CVNA increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of CVNA,
- current income from the option premiums, and

- at most times, a limit on the Fund's participation in gains, if any, of the share price returns of CVNA.

For more information, see sections "The Fund's Use of Underlying Security Option Contracts," "Synthetic Covered Call Strategy" and "Synthetic Covered Call Spread Strategy" below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security's stock price, the Fund's portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund's strategy will capture only a portion of its potential gains if the Underlying Security's stock price increase in value.**
- **The Fund's strategy is subject to all potential losses if the Underlying Security's stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund's Use of Underlying Security Option Contracts

As part of the Fund's synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® ("FLEX") call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the "strike price").
- If exercised, an option contract obligates the seller to deliver shares (for a sold or "short" call) or buy shares (for a sold or "short" put) of the underlying asset at a specified price (the "strike price").
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section "Fund Portfolio" below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see "Additional Information about the Funds – Exchange Traded Options Portfolio."

The Fund's options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a "synthetic covered call" strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund's synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government. These instruments are used as collateral for the Fund’s derivative investments. They will also generate income.	6-month to 2-year maturities
----------------------------------	---	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund’s net assets and the market value of the options package is expected to be between 0% and 50% of the Fund’s net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to CVNA equal to at least 100% of the Fund’s total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to CVNA.

The Fund is classified as “non-diversified” under the 1940 Act.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

CARVANA CO. (“CVNA”)

CVNA is a leading e-commerce platform for buying and selling used cars. CVNA is listed on the New York Stock Exchange (“NYSE”). Per CVNA’s most recent Form 10-K filing, the aggregate market value of common stock held by non-affiliates of CVNA (based on the last reported sale price of its class A common stock on June 30, 2024, on the NYSE) was approximately \$14.7 billion.

CVNA is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the SEC by CVNA pursuant to the Exchange Act can be located by reference to the SEC file number 001-38073 through the SEC’s website at www.sec.gov. In addition, information regarding CVNA may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of CVNA or other securities of CVNA. The Fund has derived all disclosures contained in this document regarding CVNA from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to CVNA. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding CVNA is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of CVNA (and therefore the price of CVNA at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning CVNA could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of CVNA.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH CARVANA CO.

Due to the Fund’s investment strategy, the Fund’s investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to CVNA. As of the date of the Prospectus, CVNA is assigned to the specialty retail industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

CVNA Risk. The Fund invests in options contracts that are based on the value of CVNA. This subjects the Fund to certain of the same risks as if it owned shares of CVNA, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of CVNA, the Fund may also be subject to the following risks:

Indirect Investment in CVNA Risk. CVNA is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of CVNA but will be exposed to the performance of CVNA (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

CVNA Trading Risk. The trading price of CVNA may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of CVNA may be traded by short sellers which may put pressure on the supply and demand for the common stock of CVNA, further influencing volatility in its market price. Public perception and other factors outside of the control of CVNA may additionally impact CVNA's stock price due to CVNA garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against CVNA in the past. While CVNA continues to defend such actions, any judgment against CVNA, or any future stockholder litigation could result in substantial costs and a diversion of the management of CVNA's attention and resources. If CVNA trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

CVNA Performance Risk. CVNA may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of CVNA to decline. CVNA provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance CVNA provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If CVNA's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by CVNA could decline significantly.

Automotive Industry Risk. The automotive retail industry is subject to significant risks that can impact both profitability and competitiveness. The industry is highly dependent on consumer demand, which can be influenced by various factors such as economic conditions, consumer confidence, fuel prices, and preferences for particular vehicle types. Economic downturns or decreases in consumer spending can lead to reduced vehicle sales, impacting the profitability of automotive retailers. Effective inventory management is essential to avoid excess holding costs, obsolescence, and missed sales opportunities. Additionally, the industry's reliance on auto lending and financing means that changes in interest rates, lending standards, and credit availability can greatly influence consumer purchasing behavior. Regulatory compliance is another crucial aspect, as automotive retailers must adhere to various consumer protection, advertising, financing, and environmental standards, with non-compliance resulting in substantial fines, legal costs, and reputational damage.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular,

the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as “rolling.” If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared (“cleared derivatives”). In a transaction involving cleared derivatives, the Fund’s counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house (“clearing members”) can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member’s individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund’s clearing member. In addition, although clearing members guarantee performance of their clients’ obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member’s bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member’s customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund’s behalf, which heightens the risks associated with a clearing member’s default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund’s behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund’s behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund’s NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options’ expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund’s NAV, will change. However, it is not expected for the Fund’s NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract’s expiration date affects the impact of the potential options contract income on the Fund’s NAV, which may not be in full effect until the expiration date of the Fund’s options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund’s NAV, the Fund generally anticipates that the rate of change in the Fund’s NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund’s investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund’s NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund’s NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund’s NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused

by extraordinary market volatility pursuant to the Exchange “circuit breaker” rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund’s holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund’s expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund’s assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund’s overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund’s ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance.

Market Events Risk. The Fund’s investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (the Underlying

Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrichelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

When available, information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

YieldMax™ DKNQ Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of DraftKings Inc. ("DKNQ" or "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	0.99%

⁽¹⁾ The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.

⁽²⁾ Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of DKNQ (Nasdaq: DKNQ) ("DKNQ" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to DKNQ regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of DKNQ, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of DKNQ increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of DKNQ,
- current income from the option premiums, and

- at most times, a limit on the Fund's participation in gains, if any, of the share price returns of DKNG.

For more information, see sections "The Fund's Use of Underlying Security Option Contracts," "Synthetic Covered Call Strategy" and "Synthetic Covered Call Spread Strategy" below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security's stock price, the Fund's portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund's strategy will capture only a portion of its potential gains if the Underlying Security's stock price increase in value.**
- **The Fund's strategy is subject to all potential losses if the Underlying Security's stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund's Use of Underlying Security Option Contracts

As part of the Fund's synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® ("FLEX") call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the "strike price").
- If exercised, an option contract obligates the seller to deliver shares (for a sold or "short" call) or buy shares (for a sold or "short" put) of the underlying asset at a specified price (the "strike price").
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section "Fund Portfolio" below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see "Additional Information about the Funds – Exchange Traded Options Portfolio."

The Fund's options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a "synthetic covered call" strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund's synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government. These instruments are used as collateral for the Fund’s derivative investments. They will also generate income.	6-month to 2-year maturities
----------------------------------	---	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund’s net assets and the market value of the options package is expected to be between 0% and 50% of the Fund’s net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to DKNNG equal to at least 100% of the Fund’s total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to DKNNG.

The Fund is classified as “non-diversified” under the 1940 Act.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

DraftKings Inc. (“DKNNG”)

DKNNG is a digital sports entertainment and gaming company. DKNNG provides users with online sports betting, online casino, and daily fantasy sports product offerings, as well as retail sportsbook, media and other consumer product offerings. DKNNG is also involved in the design and development of sports betting and casino gaming software for online and retail sportsbooks and iGaming operators. DKNNG is listed on The Nasdaq Stock Market LLC (“Nasdaq”). Per DKNNG’s most recent Form 10-K filing, the aggregate market value of the voting and non-voting common equity held by non-affiliates of DKNNG (based on the last reported sale price of its class A common stock on June 28, 2024, on Nasdaq) was approximately \$16.6 billion.

DKNNG is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the SEC by DKNNG pursuant to the Exchange Act can be located by reference to SEC file number 001-41379 through the SEC’s website at www.sec.gov. In addition, information regarding DKNNG may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of DKNNG or other securities of DKNNG. The Fund has derived all disclosures contained in this document regarding DKNNG from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to DKNNG. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding DKNNG is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of DKNNG (and therefore the price of DKNNG at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning DKNNG could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of DKNNG.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH DRAFTKINGS INC.

Due to the Fund’s investment strategy, the Fund’s investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to DKNNG. As of the date of the Prospectus, DKNNG is assigned to the hotels, restaurants & leisure industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

DKNG Risk. The Fund invests in options contracts that are based on the value of DKNG. This subjects the Fund to certain of the same risks as if it owned shares of DKNG, even though it does not. By virtue of the Fund’s investments in options contracts that are based on the value of DKNG, the Fund may also be subject to the following risks:

Indirect Investment in DKNG Risk. DKNG is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of DKNG but will be exposed to the performance of DKNG (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

DKNG Trading Risk. The trading price of DKNG may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of DKNG may be traded by short sellers which may put pressure on the supply and demand for the common stock of DKNG, further influencing volatility in its market price. Public perception and other factors outside of the control of DKNG may additionally impact DKNG’s stock price due to DKNG garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company’s securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against DKNG in the past. While DKNG continues to defend such actions, any judgment against DKNG, or any future stockholder litigation could result in substantial costs and a diversion of the management of DKNG’s attention and resources. If DKNG trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

DKNG Performance Risk. DKNG may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of DKNG to decline. DKNG provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance DKNG provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If DKNG’s guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by DKNG could decline significantly.

Gaming Industry Risk. The global gaming industry faces intense competition from alternative entertainment options such as television, movies, and sporting events, potentially reducing the popularity of gaming offerings. Success in sports betting and iGaming depends on factors beyond DKNG’s control, including sport outcomes, which can impact product performance. Additionally, partnerships with casinos, tribes, and horse-tracks are crucial for offering gaming products in specific jurisdictions, and failure to establish or manage these partnerships could hinder DKNG’s gaming business. Moreover, growth prospects are contingent upon the uncertain legalization status of real-money gaming, which may face regulatory restrictions or delays, affecting gaming operations. Obtaining and maintaining gaming licenses in multiple jurisdictions is vital for business growth, and failure to do so could impair DKNG’s ability to operate gaming platforms. Negative events or media coverage related to gaming, such as sports betting and iGaming, could also adversely affect user engagement and acquisition, potentially impacting gaming revenues.

General Risks. Economic downturns or reductions in discretionary consumer spending could adversely affect DKNG’s gaming revenue, as gaming relies heavily on consumer spending. Risks associated with information technology systems, including failures, errors, or disruptions, pose a threat to DKNG’s brand and reputation, as well as disrupting gaming operations. Despite security measures, DKNG’s IT infrastructure is vulnerable to cyberattacks or breaches, potentially compromising user data and damaging reputation. Operating in a complex regulatory environment exposes DKNG to legal and regulatory risks, with changes in laws or regulations potentially impacting gaming operations and expansion plans. Investing in or acquiring other gaming businesses poses integration risks, affecting DKNG’s overall performance. Being subject to taxation in multiple jurisdictions exposes DKNG to additional tax liabilities due to changes in tax laws or interpretations, affecting financial performance. The company’s stock price may experience volatility, risking potential loss for investors due to fluctuations in

market conditions. Additionally, as a controlled company, shareholders may lack certain corporate governance protections, potentially impacting investor confidence.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts

is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract's expiration date affects the impact of the potential options contract income on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund's NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (the Underlying Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

When available, information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

YieldMax™ HOOD Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of the Robinhood Markets, Inc. ("HOOD" or the "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	0.99%

- ⁽¹⁾ The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.

- ⁽²⁾ Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of HOOD (Nasdaq: HOOD) ("HOOD" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to HOOD regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of HOOD, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of HOOD increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of HOOD,
- current income from the option premiums, and

- at most times, a limit on the Fund's participation in gains, if any, of the share price returns of HOOD.

For more information, see sections "The Fund's Use of Underlying Security Option Contracts," "Synthetic Covered Call Strategy" and "Synthetic Covered Call Spread Strategy" below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security's stock price, the Fund's portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund's strategy will capture only a portion of its potential gains if the Underlying Security's stock price increase in value.**
- **The Fund's strategy is subject to all potential losses if the Underlying Security's stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund's Use of Underlying Security Option Contracts

As part of the Fund's synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® ("FLEX") call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the "strike price").
- If exercised, an option contract obligates the seller to deliver shares (for a sold or "short" call) or buy shares (for a sold or "short" put) of the underlying asset at a specified price (the "strike price").
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section "Fund Portfolio" below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see "Additional Information about the Funds – Exchange Traded Options Portfolio."

The Fund's options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a "synthetic covered call" strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund's synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	<p>Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government.</p> <p>These instruments are used as collateral for the Fund’s derivative investments.</p> <p>They will also generate income.</p>	6-month to 2-year maturities
----------------------------------	--	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund’s net assets and the market value of the options package is expected to be between 0% and 50% of the Fund’s net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to HOOD equal to at least 100% of the Fund’s total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to HOOD.

The Fund is classified as “non-diversified” under the 1940 Act.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Robinhood Markets, Inc. (“HOOD”)

HOOD is a financial services company known for its commission-free trading software application that allows users to invest in stocks, ETFs, options, and cryptocurrencies. HOOD is listed on the Nasdaq Stock Market (“Nasdaq”). Per HOOD’s most recent Form 10-K filing, the aggregate market value of the voting and non-voting common stock held by non-affiliates of HOOD (based on the last reported sale price of its class A common stock on June 30, 2024, on the Nasdaq Global Select Market) was approximately \$16.3 billion.

HOOD is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the SEC by HOOD pursuant to the Exchange Act can be located by reference to SEC file number 001-40691 through the SEC’s website at www.sec.gov. In addition, information regarding HOOD may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of HOOD or other securities of HOOD. The Fund has derived all disclosures contained in this document regarding HOOD from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to HOOD. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding HOOD is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of HOOD (and therefore the price of HOOD at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning HOOD could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of HOOD.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH ROBINHOOD MARKETS, INC.

Due to the Fund’s investment strategy, the Fund’s investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to HOOD. As of the date of the Prospectus, HOOD is assigned to the capital markets industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

HOOD Risk. The Fund invests in options contracts that are based on the value of HOOD. This subjects the Fund to certain of the same risks as if it owned shares of HOOD, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of HOOD, the Fund may also be subject to the following risks:

Indirect Investment in HOOD Risk. HOOD is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of HOOD but will be exposed to the performance of HOOD (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

HOOD Trading Risk. The trading price of HOOD may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of HOOD may be traded by short sellers which may put pressure on the supply and demand for the common stock of HOOD, further influencing volatility in its market price. Public perception and other factors outside of the control of HOOD may additionally impact HOOD's stock price due to HOOD garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against HOOD in the past. While HOOD continues to defend such actions, any judgment against HOOD, or any future stockholder litigation could result in substantial costs and a diversion of the management of HOOD's attention and resources. If HOOD trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

HOOD Performance Risk. HOOD may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of HOOD to decline. HOOD provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance HOOD provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If HOOD's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by HOOD could decline significantly.

HOOD Operational Risks. HOOD's plans to venture into new international markets introduces significant uncertainties that may not yield desired outcomes. Operations are subject to complex and evolving laws, with non-compliance posing threats to HOOD's business. Past and potential future regulatory investigations, settlements, and litigation could lead to substantial costs and reputational damage. Intense competition from rivals with greater resources threatens HOOD's market position and revenue. Failure to retain existing customers or attract new ones, coupled with reduced usage of products and services, may result in declining revenue. Moreover, failure to develop and monetize innovative offerings could diminish competitiveness and revenue streams.

Dependence on complex software and systems entails the risk of interruptions, instability, and flaws, potentially disrupting operations. Reliance on third-party entities for critical functions exposes the company to risks associated with their performance. Additionally, incorporating AI technologies presents business, compliance, and reputational risks. Cybersecurity breaches targeting the company's systems or customer data could lead to significant financial and reputational damage. Failure to maintain required net capital levels may result in restrictions and regulatory actions.

Risks associated with the effectiveness of compliance and risk management policies and procedures may impact operations under different market conditions. Operating in the highly volatile cryptocurrency market exposes the company to uncertainties and fluctuations affecting trading volumes and revenues.

Regulatory uncertainties surrounding cryptocurrency classification and compliance could lead to scrutiny, fines, and penalties. The complexity of rapidly evolving and difficult-to-interpret cryptocurrency laws and regulations poses challenges and compliance risks. Offering payment and spending services introduces risks related to illegal payments, customer asset loss, disputes, and liabilities. Future issuances of stock may lead to significant dilution, impacting shareholder value. Lastly, concentrated voting power with founders and multi-class stock structures limit shareholder influence over company decisions.

Financial Exchanges and Data Industry Risks. The industry is highly susceptible to fluctuations in economic conditions, changes in market sentiment, and regulatory alterations, which can significantly affect market volatility and trading volumes.

Technological disruptions or failures, including cybersecurity breaches, could compromise user data and disrupt trading activities, potentially leading to financial losses for both the company and its users. Additionally, the competitive landscape, with rapid technological advancements and the emergence of new competitors, could impact HOOD's market share and profitability. Such factors could adversely affect HOOD's business performance and stock price and, in turn, negatively impact the Fund.

Global Crypto Asset Trading Platform Risks. HOOD has announced plans to expand its crypto asset business. Such an expansion will subject HOOD to risks related to regulatory compliance, such as the potential for increased scrutiny, enhanced anti-money laundering (AML) and know your customer (KYC) requirements, and the need for additional licenses in various jurisdictions. Operational risks will also arise from the complexities of integrating the new platform's operations, technology, and culture, as well as the need to bolster system security and manage a more extensive technology infrastructure. Market risks, including high volatility and liquidity management challenges, will become more pronounced. Reputational risks could emerge from potential security breaches, operational failures, or regulatory violations, affecting customer trust and market perception. Legal risks may increase due to potential litigation and intellectual property issues. Additionally, HOOD will be subject to financial risks associated with the capital investment required for the expansion.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing

member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the Fund's NAV may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract's expiration date affects the impact of the potential options contract income on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund's NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund’s overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund’s ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Market Events Risk. The Fund’s investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (the Underlying Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund’s taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund’s investments in options were to exceed 25% of the Fund’s total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund’s performance history from year to year and showing how the Fund’s average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund’s website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the “Adviser”) serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

When available, information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

YieldMax™ JD Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of the ADR of JD.com, Inc. ("JD" or the "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	0.99%

- ⁽¹⁾ The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.

- ⁽²⁾ Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of the ADR of JD (NYSE Arca: JD) ("JD" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to JD regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of JD, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of JD increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of JD,
- current income from the option premiums, and

- at most times, a limit on the Fund's participation in gains, if any, of the share price returns of JD.

For more information, see sections "The Fund's Use of Underlying Security Option Contracts," "Synthetic Covered Call Strategy" and "Synthetic Covered Call Spread Strategy" below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security's stock price, the Fund's portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund's strategy will capture only a portion of its potential gains if the Underlying Security's stock price increase in value.**
- **The Fund's strategy is subject to all potential losses if the Underlying Security's stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund's Use of Underlying Security Option Contracts

As part of the Fund's synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® ("FLEX") call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the "strike price").
- If exercised, an option contract obligates the seller to deliver shares (for a sold or "short" call) or buy shares (for a sold or "short" put) of the underlying asset at a specified price (the "strike price").
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section "Fund Portfolio" below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see "Additional Information about the Funds – Exchange Traded Options Portfolio."

The Fund's options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a "synthetic covered call" strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund's synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio (All options are based on the value of the Underlying Security)	Holdings (Investment Terms)	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	<p>Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government.</p> <p>These instruments are used as collateral for the Fund’s derivative investments.</p> <p>They will also generate income.</p>	6-month to 2-year maturities
----------------------------------	--	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund’s net assets and the market value of the options package is expected to be between 0% and 50% of the Fund’s net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to JD equal to at least 100% of the Fund’s total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to JD.

The Fund is classified as “non-diversified” under the 1940 Act.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

JD.Com, Inc. (“JD”)

JD is a leading supply chain-based technology and service provider, providing products and services to consumers, third-party merchants, suppliers and other business partners through its subsidiaries, consolidated variable interest entities (“VIEs”) and consolidated VIEs’ subsidiaries. JD is listed on the Nasdaq Global Select Market (“Nasdaq”).

The American Depositary Share of JD is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the SEC by JD pursuant to the Exchange Act can be located by reference to the SEC file number 001-36450 through the SEC’s website at www.sec.gov. In addition, information regarding JD may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of JD or other securities of JD. The Fund has derived all disclosures contained in this document regarding JD from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to JD. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding JD is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of JD (and therefore the price of JD at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning JD could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of JD.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH JD.COM, INC.

Due to the Fund’s investment strategy, the Fund’s investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to JD. As of the date of the Prospectus, JD is assigned to the broadline retail industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

JD Risk. The Fund invests in options contracts that are based on the value of JD. This subjects the Fund to certain of the same risks as if it owned shares of JD, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of JD, the Fund may also be subject to the following risks:

Indirect Investment in JD Risk. JD is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of JD but will be exposed to the performance of JD (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

JD Trading Risk. The trading price of JD may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of JD may be traded by short sellers which may put pressure on the supply and demand for the common stock of JD, further influencing volatility in its market price. Public perception and other factors outside of the control of JD may additionally impact JD's stock price due to JD garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. If JD trading is halted, trading in Shares of the JD Fund may be impacted, either temporarily or indefinitely.

JD Performance Risk. JD may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of JD to decline. JD provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance JD provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If JD's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by JD could decline significantly.

Internet & Direct Marketing Retail Risk. Companies, such as JD, that operate via the internet or direct marketing (e.g., online consumer services, online retail, travel) segments are subject to fluctuating consumer demand. Unlike traditional brick and mortar retailers, online marketplaces and retailers must assume shipping costs or pass such costs to consumers. Consumer access to price information for the same or similar products may cause companies that operate in the online marketplace, retail and travel segments to reduce profit margins in order to compete. Due to the nature of their business models, companies that operate in the online marketplace, retail, and travel segments may also be subject to heightened cybersecurity risk, including the risk of theft or damage to vital hardware, software, and information systems. The loss or public dissemination of sensitive customer information or other proprietary data may negatively affect the financial performance of such companies to a greater extent than traditional brick and mortar retailers. As a result of such companies being web-based and the fact that they process, store, and transmit large amounts of data, including personal information, for their customers, failure to prevent or mitigate data loss or other security breaches, including breaches of vendors' technology and systems, could expose companies that operate via the internet or direct marketing retail to a risk of loss or misuse of such information, adversely affect their operating results, result in litigation or potential liability, and otherwise harm their businesses.

Business Structural Risks. Investing in JD, a Cayman Islands holding company, carries several significant risks due to the company's unique business structure and its base of operations primarily in China. Due to restrictions on foreign ownership and investment in China, JD, like other foreign-incorporated entities operating in China, functions through a Variable Interest Entity structure (VIE) for its internet and other business activities. The VIEs are owned and incorporated by Chinese citizens or entities controlled by them, not JD itself. Though contractual agreements enable JD to effectively control the VIEs and realize the economic benefits, investors are essentially purchasing equity securities in a Cayman Islands holding company rather than equity securities issued by JD's consolidated subsidiaries and the VIE. This structure exposes investors to potential risks and uncertainties, including regulatory changes in China.

In addition to these structural complexities, the company also confronts various operational and legal risks due to its base and primary operations in China. The Chinese government retains significant authority to regulate the business operations of China-based companies like JD, including their overseas listings and fundraisings. Other challenges include maintaining the trusted status of JD's ecosystems, the impact of sustained investment on margins and net income, competition, ability to innovate and adapt, risks related to acquisitions, and expansion of international and cross-border operations.

Holding Foreign Companies Accountable Act (HFCAA) Risks. The HFCAA is a U.S. law enacted in 2020, requiring the SEC to ban trading on all U.S. exchanges of any foreign company for which the Public Company Accounting Oversight Board (“PCAOB”) is unable to inspect audit workpapers for three consecutive years, which is a particular threat to Chinese companies as PCAOB inspection of the audit work of foreign accounting firms conflicts with Chinese law and policy. The enactment of the HFCAA and other efforts to increase U.S. regulatory access to audit workpapers could cause investor uncertainty, and the market price of any Chinese securities held by a Fund could be adversely affected. In addition, PCAOB’s inability to evaluate the audits and quality control procedures of auditors deprive investors of the transparency and protections provided by such evaluations and may subject such investors to a heightened risk of fraud. In 2022, China regulators entered into an agreement with the PCAOB to facilitate access to the documents required for inspection of audit firms and audit documents with respect to Chinese issuers listed on U.S. exchanges. However, if the PCAOB is unable to inspect a company’s auditors for three consecutive years, the issuer’s securities would be de-listed from the U.S. exchange on which it trades and the resulting impact could negatively impact a Fund’s performance.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund’s investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund’s other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund’s investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as “rolling.” If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared (“cleared derivatives”). In a transaction involving cleared derivatives, the Fund’s counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house (“clearing members”) can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member’s individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund’s clearing member. In addition, although clearing members guarantee performance of their clients’ obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member’s bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member’s customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund’s behalf, which heightens the risks associated with a clearing member’s default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund’s behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund’s behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract's expiration date affects the impact of the potential options contract income on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund's NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

Foreign Investment Risk. Because the Fund has indirect exposure to the ADR of a foreign company, the Fund may be subject to risks associated with foreign investments.

- *Currency Risk:* Indirect exposure to foreign currencies subjects the Fund to the risk that currencies will decline in value relative to the U.S. dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates and the imposition of currency controls or other political developments in the U.S. or abroad.
- *Depository Receipts Risk:* Investment in ADRs may be less liquid than the underlying shares in their primary trading market.
- *Foreign Market and Trading Risk:* The trading markets for many foreign securities are not as active as U.S. markets and may have less governmental regulation and oversight.
- *Foreign Securities Risk:* Investments in securities of non-U.S. issuers involve certain risks that may not be present with investments in securities of U.S. issuers, such as risk of loss due to foreign currency fluctuations or to political or economic

instability, as well as varying regulatory requirements applicable to investments in non-U.S. issuers. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Non-U.S. issuers may also be subject to different regulatory, accounting, auditing, financial reporting and investor protection standards than U.S. issuers.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as “Authorized Participants” or “APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund’s investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund’s investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund’s NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange “circuit breaker” rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund’s holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund’s expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund’s assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited

to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund’s overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund’s ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Market Events Risk. The Fund’s investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (the Underlying Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund’s taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund’s investments in options were to exceed 25% of the Fund’s total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the

obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrichelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

CFA[®] is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

When available, information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

YieldMax™ MARA Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of MARA Holdings, Inc. ("MARA" or the "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	0.99%

- ⁽¹⁾ The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.
- ⁽²⁾ Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of MARA Holdings, Inc. (The Nasdaq Stock Market LLC: MARA) ("MARA" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to MARA regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of MARA, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of MARA increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of MARA,
- current income from the option premiums, and

- at most times, a limit on the Fund's participation in gains, if any, of the share price returns of MARA.

For more information, see sections "The Fund's Use of Underlying Security Option Contracts," "Synthetic Covered Call Strategy" and "Synthetic Covered Call Spread Strategy" below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security's stock price, the Fund's portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund's strategy will capture only a portion of its potential gains if the Underlying Security's stock price increase in value.**
- **The Fund's strategy is subject to all potential losses if the Underlying Security's stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund's Use of Underlying Security Option Contracts

As part of the Fund's synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® ("FLEX") call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the "strike price").
- If exercised, an option contract obligates the seller to deliver shares (for a sold or "short" call) or buy shares (for a sold or "short" put) of the underlying asset at a specified price (the "strike price").
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section "Fund Portfolio" below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see "Additional Information about the Funds – Exchange Traded Options Portfolio."

The Fund's options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a "synthetic covered call" strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund's synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio (All options are based on the value of the Underlying Security)	Holdings (Investment Terms)	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	<p>Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government.</p> <p>These instruments are used as collateral for the Fund’s derivative investments.</p> <p>They will also generate income.</p>	6-month to 2-year maturities
----------------------------------	--	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund’s net assets and the market value of the options package is expected to be between 0% and 50% of the Fund’s net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to MARA equal to at least 100% of the Fund’s total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to MARA.

The Fund is classified as “non-diversified” under the 1940 Act.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

MARA HOLDINGS, INC. (“MARA”)

MARA is a digital asset technology company that is principally engaged in producing or “mining” digital assets with a focus on the Bitcoin ecosystem. MARA is listed on the Nasdaq Stock Market LLC (“Nasdaq”). Per MARA’s most recent Form 10-K filing, the aggregate market value of common stock held by non-affiliates of MARA (based on the last reported sale price of its class A common stock on June 30, 2023, on Nasdaq) was approximately \$2.4 billion.

MARA is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the SEC by MARA pursuant to the Exchange Act can be located by reference to the SEC file number 001-36555 through the SEC’s website at www.sec.gov. In addition, information regarding MARA may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of MARA or other securities of MARA. The Fund has derived all disclosures contained in this document regarding MARA from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to MARA. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding MARA is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of MARA (and therefore the price of MARA at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning MARA could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of MARA.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH MARA HOLDINGS, INC.

Due to the Fund’s investment strategy, the Fund’s investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to MARA. As of the date of the Prospectus, MARA is assigned to the software industry.

Information About Bitcoin

The Fund does not invest directly in Bitcoin or any other digital assets. The Fund does not invest directly in derivatives that track the performance of Bitcoin or any other digital assets. The Fund does not invest in or seek direct exposure to the current “spot” or cash price of Bitcoin. Investors seeking direct exposure to the price of Bitcoin should consider an investment other than the Fund. The following provides an overview of Bitcoin, the Bitcoin Blockchain, the relationship between the two, as well as their use cases.

Bitcoin Description:

Bitcoin, the first and most well-known cryptocurrency, operates on a decentralized network using blockchain technology to facilitate secure and anonymous transactions. Bitcoin represents a digital asset that functions as a medium of exchange utilizing cryptographic

protocols to secure transactional processes, control the creation of additional units, and verify the transfer of assets. Its operation on a decentralized blockchain network ensures both transparency and immutability of records, without the need for a central authority. This innovative technology underpinning Bitcoin allows for peer-to-peer transactions and provides a framework for digital scarcity, making Bitcoin a unique investment commodity within the digital currency landscape. Although Bitcoin is called a crypto or digital currency, it is not presently accepted widely as payment.

Bitcoin Blockchain Description:

The Bitcoin blockchain constitutes a decentralized, digital ledger technology that chronologically and publicly records all Bitcoin transactions. This technology is characterized by its use of blocks, which are structurally linked in a chain through cryptographic hashes. Each block contains a list of transactions that, once verified and added to the blockchain through a consensus process known as proof of work, becomes irreversible and tamper-evident. The integrity, transparency, and security of the transactional data are maintained autonomously within the Bitcoin network, eliminating the necessity for central oversight and facilitating trust in a peer-to-peer system.

The Relationship between Bitcoin and Bitcoin Blockchain:

Bitcoin is a digital asset that operates on the Bitcoin blockchain, a decentralized and cryptographic ledger system. The Bitcoin blockchain underpins the entire Bitcoin network, providing a secure and transparent mechanism for recording Bitcoin transactions. Each Bitcoin transaction is verified by network participants and permanently recorded on the Bitcoin blockchain, ensuring the integrity and traceability of the digital asset. Thus, while Bitcoin serves as a medium of exchange or store of value, the Bitcoin blockchain acts as the immutable record-keeping system that facilitates and authenticates the circulation and ownership of Bitcoin. This symbiotic relationship ensures that Bitcoin operates in a trustless and decentralized manner, with the Bitcoin blockchain maintaining the currency's history and scarcity.

Bitcoin and Bitcoin Blockchain Use Cases:

Bitcoin and the Bitcoin blockchain serve as innovative financial instruments within the digital economy, offering multiple use cases. However, their adoption has been limited. Key applications include:

1. **Decentralized Transactions:** Bitcoin facilitates peer-to-peer financial transactions globally without the need for intermediaries, reducing transaction costs and times. This feature makes it an attractive option for cross-border transfers and remittances. Bitcoin and the Bitcoin Blockchain were designed to be used as an alternative general purpose payment system and while bitcoin may be an attractive option for cross border transfers and remittances, it is presently not widely used as a means of payment.
2. **Store of Value:** Due to its limited supply and decentralized nature, Bitcoin is perceived as a digital alternative to traditional stores of value like gold, potentially serving as a hedge against inflation and currency devaluation.
3. **Smart Contracts:** While primarily associated with other blockchain platforms, the Bitcoin blockchain can execute smart contracts—self-executing contractual agreements with the terms directly written into code—thereby enabling automated and conditional transactions.
4. **Asset Tokenization:** The Bitcoin blockchain provides a platform for tokenizing assets, converting rights to an asset into a digital token on the blockchain. This can include real estate, stocks, or other forms of assets, enhancing liquidity and market efficiency. At this time this functionality is limited. Unlike the scripting language of blockchain platforms like Ethereum, the scripting language of the Bitcoin Blockchain is not Turing complete, and thus more limited in terms of the types of smart contracts it can support.
5. **Digital Identity Verification:** Leveraging the security and immutability of the Bitcoin blockchain, companies can develop digital identity verification systems, enhancing privacy and reducing identity theft. At this time, this functionality is limited.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which they appear.

MARA Risk. The Fund invests in options contracts that are based on the value of MARA. This subjects the Fund to certain of the same risks as if it owned shares of MARA, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of MARA, the Fund may also be subject to the following risks:

Indirect Investment in MARA Risk. MARA is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of MARA but will be exposed to the performance of MARA (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

MARA Trading Risk. The trading price of MARA may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of MARA may be traded by short sellers which may put pressure on the supply and demand for the common stock of MARA, further influencing volatility in its market price. Public perception and other factors outside of the control of MARA may additionally impact MARA's stock price due to MARA garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against MARA in the past. While MARA continues to defend such actions, any judgment against MARA, or any future stockholder litigation could result in substantial costs and a diversion of the management of MARA's attention and resources. If MARA trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

MARA Performance Risk. MARA may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of MARA to decline. MARA provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance MARA provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If MARA's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by MARA could decline significantly.

Bitcoin Mining Industry & Bitcoin Risks.

Companies in the Bitcoin mining industry are subject to inherent technological and operational risks. MARA's operations, which include validating transactions and securing the network, are heavily dependent on energy consumption, making MARA's profitability susceptible to fluctuations in energy prices and potential regulatory changes affecting energy usage. The concentration of mining operations in regions with lower energy costs can also expose the company to local political and economic instability, potentially disrupting operations. Technological changes or advancements in mining algorithms can render MARA's existing equipment obsolete, leading to significant capital losses. Moreover, as the reward for mining new blocks diminishes over time, the financial incentive to continue mining may decrease, potentially reducing MARA's profitability and affecting its operational viability.

Bitcoin's price is highly volatile, and its market is influenced by the changing Bitcoin network, fluctuating acceptance levels, and unpredictable usage trends. Not being a legal tender and operating outside central authority systems like banks, Bitcoin faces potential government restrictions. For instance, some countries may limit or ban Bitcoin transactions, negatively impacting its market value.

The risks associated with Bitcoin include the possibility of fraud, theft, market manipulation, and security breaches in trading platforms. A small group of large Bitcoin holders, known as "whales," can significantly influence Bitcoin's price. The largely unregulated nature of Bitcoin and its trading venues heightens risks of fraudulent activities and market manipulation, which could affect Bitcoin's price. For example, if a group of miners gains control over a majority of the Bitcoin network, they could manipulate transactions to their advantage. Historical instances have seen Bitcoin trading venues shut down due to fraud or security breaches, often leaving investors without recourse and facing significant losses.

Updates to Bitcoin's software, proposed by developers, can lead to the creation of new digital assets, or "forks," if not broadly adopted. This can impact Bitcoin's demand and the Fund's performance. The extreme volatility of Bitcoin's market price can result in shareholder losses. Furthermore, the operation of Bitcoin exchanges may be disrupted or cease altogether due to various issues, further affecting Bitcoin's price and the Fund's investments.

The value of Bitcoin has historically been subject to significant speculation, making trading and investing in Bitcoin reliant on market sentiment rather than traditional fundamental analysis.

Bitcoin's price can be influenced by events unrelated to its security or utility, including instability in other speculative areas of the crypto/blockchain space, potentially leading to substantial declines in its value.

Risks associated with crypto asset trading platforms include fragmentation, regulatory non-compliance, and the possibility of enforcement actions by regulatory authorities, which could impact the valuation of Bitcoin-linked derivatives held by the Underlying ETPs.

The security of the Bitcoin blockchain may be compromised if a single miner or group controls more than 50% of the network's hashing power, where hashing power refers to the computational capacity used to validate and secure transactions on the blockchain.

Proposed changes to the Bitcoin protocol may not be universally adopted, leading to the creation of competing blockchains (forks) with different assets and participants, exemplified by past forks like Bitcoin Cash and Bitcoin SV.

The Bitcoin blockchain protocol may contain vulnerabilities that attackers could exploit to disrupt its operation, potentially compromising the security and reliability of the network.

Emerging alternative public blockchains, particularly those emphasizing privacy through technologies like zero-knowledge cryptography, pose risks and challenges to the dominance of the Bitcoin blockchain as a payment system.

Common impediments to adopting the Bitcoin blockchain as a payment network include slow transaction processing, variability in transaction fees, and the volatility of Bitcoin's price, which may deter widespread adoption by businesses and consumers.

The development and use of "Layer II solutions" are critical for the scalability and functionality of the Bitcoin blockchain, but they also introduce risks such as off-chain transaction execution, which could affect transparency and security. Layer II solutions are off-chain protocols that improve scalability and reduce transaction costs by processing transactions outside the main blockchain network.

Adoption and use of other blockchains supporting advanced applications like smart contracts present challenges to the dominance of the Bitcoin blockchain, potentially impacting its long-term relevance and utility in the evolving landscape of blockchain technology.

- **Digital Assets Risk:** Digital assets like Bitcoin, designed as mediums of exchange, are still an emerging asset class. They operate independently of any central authority or government backing and are subject to regulatory changes and extreme price volatility. The trading platforms for digital assets are relatively new, largely unregulated, and thus more vulnerable to fraud and failures compared to traditional, regulated exchanges. Shutdowns of these platforms due to fraud, technical glitches, or security issues can significantly affect digital asset prices and market volatility.
- **Digital Asset Markets Risk:** The digital asset market, particularly Bitcoin, has experienced considerable volatility, leading to market disruptions and erosion of confidence among market participants. This instability and the resultant negative publicity could adversely affect the Fund's reputation and trading prices. Ongoing market turbulence could significantly impact the value of the Fund's share.
- **Blockchain Technology Risk:** Blockchain technology, which underpins Bitcoin and other digital assets, is relatively new, and many of its applications are untested. The adoption of blockchain and the development of competing platforms or technologies could affect its usage. Investments in companies or vehicles that utilize blockchain technology are subject to market volatility and may experience lower trading volumes compared to more established industries. Additionally, regulatory changes, internet disruptions, cybersecurity incidents, and intellectual property disputes could further affect the adoption and functionality of blockchain technology.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the

reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as “rolling.” If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared (“cleared derivatives”). In a transaction involving cleared derivatives, the Fund’s counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house (“clearing members”) can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member’s individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund’s clearing member. In addition, although clearing members guarantee performance of their clients’ obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member’s bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member’s customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund’s behalf, which heightens the risks associated with a clearing member’s default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund’s behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund’s behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund’s NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options’ expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund’s NAV, will change. However, it is not expected for the Fund’s NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract’s expiration date affects the impact of the potential options contract income on the Fund’s NAV, which may not be in full effect until the expiration date of the Fund’s options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund’s NAV, the Fund generally anticipates that the rate of change in the Fund’s NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund’s investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund’s NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be

significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (the Underlying Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

When available, information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

YieldMax™ PDD Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of the ADR of PDD Holdings Inc. ("PDD" or the "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	0.99%

- ⁽¹⁾ The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.

- ⁽²⁾ Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of the ADR of PDD Holdings Inc. (Nasdaq Global Stock Market: PDD) ("PDD" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to PDD regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of PDD, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of PDD increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of PDD,
- current income from the option premiums, and

- at most times, a limit on the Fund's participation in gains, if any, of the share price returns of PDD.

For more information, see sections "The Fund's Use of Underlying Security Option Contracts," "Synthetic Covered Call Strategy" and "Synthetic Covered Call Spread Strategy" below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security's stock price, the Fund's portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund's strategy will capture only a portion of its potential gains if the Underlying Security's stock price increase in value.**
- **The Fund's strategy is subject to all potential losses if the Underlying Security's stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund's Use of Underlying Security Option Contracts

As part of the Fund's synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® ("FLEX") call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the "strike price").
- If exercised, an option contract obligates the seller to deliver shares (for a sold or "short" call) or buy shares (for a sold or "short" put) of the underlying asset at a specified price (the "strike price").
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section "Fund Portfolio" below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see "Additional Information about the Funds – Exchange Traded Options Portfolio."

The Fund's options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a "synthetic covered call" strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund's synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	<p>Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government.</p> <p>These instruments are used as collateral for the Fund's derivative investments.</p> <p>They will also generate income.</p>	6-month to 2-year maturities
----------------------------------	--	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund's net assets and the market value of the options package is expected to be between 0% and 50% of the Fund's net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to PDD equal to at least 100% of the Fund's total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to PDD.

The Fund is classified as "non-diversified" under the 1940 Act.

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

PDD Holdings Inc. ("PDD")

PDD Holdings Inc. is a multinational commerce group that owns and operates a portfolio of businesses. The company aims to bring more businesses and people into the digital economy so that local communities and small businesses can benefit from increased productivity and new opportunities. It has built a network of sourcing, logistics, and fulfillment capabilities, that support its underlying businesses. The company was founded by in 2015, is incorporated in the Cayman Islands, and is headquartered in Dublin, Ireland. PDD is listed on the Nasdaq Global Select Market ("Nasdaq"). PDD's primary business operations are located in China.

The American Depositary Share of PDD is registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Information provided to or filed with the SEC by PDD pursuant to the Exchange Act can be located by reference to the SEC file number 001-38591 through the SEC's website at www.sec.gov. In addition, information regarding PDD may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of PDD or other securities of PDD. The Fund has derived all disclosures contained in this document regarding PDD from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to PDD. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding PDD is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of PDD (and therefore the price of PDD at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning PDD could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of PDD.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH PDD HOLDINGS INC.

Due to the Fund's investment strategy, the Fund's investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to PDD. As of the date of the Prospectus, PDD is assigned to the broadband retail industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

PDD Risk. The Fund invests in options contracts that are based on the value of PDD. This subjects the Fund to certain of the same risks as if it owned shares of PDD, even though it does not. By virtue of the Fund’s investments in options contracts that are based on the value of PDD, the Fund may also be subject to the following risks:

Indirect Investment in PDD Risk. PDD is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of PDD but will be exposed to the performance of PDD (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

PDD Trading Risk. The trading price of PDD may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of PDD may be traded by short sellers which may put pressure on the supply and demand for the common stock of PDD, further influencing volatility in its market price. Public perception and other factors outside of the control of PDD may additionally impact PDD’s stock price due to PDD garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company’s securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against PDD in the past. While PDD continues to defend such actions, any judgment against PDD, or any future stockholder litigation could result in substantial costs and a diversion of the management of PDD’s attention and resources. If PDD trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

PDD Performance Risk. PDD may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of PDD to decline. PDD provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance PDD provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If PDD’s guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by PDD could decline significantly.

Internet & Direct Marketing Retail Risk. Companies, such as PDD, that operate via the internet or direct marketing (e.g., online consumer services, online retail, travel) segments are subject to fluctuating consumer demand. Unlike traditional brick and mortar retailers, online marketplaces and retailers must assume shipping costs or pass such costs to consumers. Consumer access to price information for the same or similar products may cause companies that operate in the online marketplace, retail and travel segments to reduce profit margins in order to compete. Due to the nature of their business models, companies that operate in the online marketplace, retail, and travel segments may also be subject to heightened cybersecurity risk, including the risk of theft or damage to vital hardware, software, and information systems. The loss or public dissemination of sensitive customer information or other proprietary data may negatively affect the financial performance of such companies to a greater extent than traditional brick and mortar retailers. As a result of such companies being web-based and the fact that they process, store, and transmit large amounts of data, including personal information, for their customers, failure to prevent or mitigate data loss or other security breaches, including breaches of vendors’ technology and systems, could expose companies that operate via the internet or direct marketing retail to a risk of loss or misuse of such information, adversely affect their operating results, result in litigation or potential liability, and otherwise harm their businesses.

Business Structural Risks. Investing in PDD, a Cayman Islands holding company, carries several significant risks due to the company’s unique business structure and its base of operations primarily in China. Due to restrictions on foreign ownership and investment in China, PDD, like other foreign-incorporated entities operating in China, functions through a Variable Interest Entity structure (VIE) for its internet and other business activities. The VIEs are owned and incorporated by Chinese citizens or entities controlled by them, not PDD itself. Though contractual agreements enable PDD to effectively control the VIEs and realize the economic benefits, investors are essentially purchasing equity securities in a Cayman Islands holding company rather than equity securities issued by PDD’s consolidated subsidiaries and the VIE. This structure exposes investors to potential risks and uncertainties, including regulatory changes in China.

In addition to these structural complexities, the company also confronts various operational and legal risks due to its base and primary operations in China. The Chinese government retains significant authority to regulate the business operations of China-based companies like PDD, including their overseas listings and fundraisings. Other challenges include maintaining the trusted status of PDD's ecosystems, the impact of sustained investment on margins and net income, competition, ability to innovate and adapt, risks related to acquisitions, and expansion of international and cross-border operations.

Holding Foreign Companies Accountable Act (HFCAA) Risks. The HFCAA is a U.S. law enacted in 2020, requiring the SEC to ban trading on all U.S. exchanges of any foreign company for which the Public Company Accounting Oversight Board ("PCAOB") is unable to inspect audit workpapers for three consecutive years, which is a particular threat to Chinese companies as PCAOB inspection of the audit work of foreign accounting firms conflicts with Chinese law and policy. The enactment of the HFCAA and other efforts to increase U.S. regulatory access to audit workpapers could cause investor uncertainty, and the market price of any Chinese securities held by a Fund could be adversely affected. In addition, PCAOB's inability to evaluate the audits and quality control procedures of auditors deprive investors of the transparency and protections provided by such evaluations and may subject such investors to a heightened risk of fraud. In 2022, China regulators entered into an agreement with the PCAOB to facilitate access to the documents required for inspection of audit firms and audit documents with respect to Chinese issuers listed on U.S. exchanges. However, if the PCAOB is unable to inspect a company's auditors for three consecutive years, the issuer's securities would be de-listed from the U.S. exchange on which it trades and the resulting impact could negatively impact a Fund's performance.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated

with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract's expiration date affects the impact of the potential options contract income on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund's NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

Foreign Investment Risk. Because the Fund has indirect exposure to the ADR of a foreign company, the Fund may be subject to risks associated with foreign investments.

- *Currency Risk:* Indirect exposure to foreign currencies subjects the Fund to the risk that currencies will decline in value relative to the U.S. dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates and the imposition of currency controls or other political developments in the U.S. or abroad.

- *Depository Receipts Risk:* Investment in ADRs may be less liquid than the underlying shares in their primary trading market.
- *Foreign Market and Trading Risk:* The trading markets for many foreign securities are not as active as U.S. markets and may have less governmental regulation and oversight.
- *Foreign Securities Risk:* Investments in securities of non-U.S. issuers involve certain risks that may not be present with investments in securities of U.S. issuers, such as risk of loss due to foreign currency fluctuations or to political or economic instability, as well as varying regulatory requirements applicable to investments in non-U.S. issuers. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Non-U.S. issuers may also be subject to different regulatory, accounting, auditing, financial reporting and investor protection standards than U.S. issuers.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as “Authorized Participants” or “APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund’s investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund’s investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund’s NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange “circuit breaker” rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund’s holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund’s expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency

or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrichelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

When available, information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

YieldMax™ PLTR Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of Palantir Technologies Inc. ("PLTR" or the "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses (includes dividend, tax and broker expense) ⁽²⁾	0.45%
Total Annual Fund Operating Expenses	1.44%

- ⁽¹⁾ The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.
- ⁽²⁾ Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$147	\$456

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. For the fiscal period from October 7, 2024 (commencement of operations) to October 31, 2024, the Fund's portfolio turnover rate was 0% of the average value of its portfolio.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of PLTR (Nasdaq: PLTR) ("PLTR" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to PLTR regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of PLTR, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of PLTR increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of PLTR,

- current income from the option premiums, and
- at most times, a limit on the Fund's participation in gains, if any, of the share price returns of PLTR.

For more information, see sections "The Fund's Use of Underlying Security Option Contracts," "Synthetic Covered Call Strategy" and "Synthetic Covered Call Spread Strategy" below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security's stock price, the Fund's portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund's strategy will capture only a portion of its potential gains if the Underlying Security's stock price increase in value.**
- **The Fund's strategy is subject to all potential losses if the Underlying Security's stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund's Use of Underlying Security Option Contracts

As part of the Fund's synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® ("FLEX") call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the "strike price").
- If exercised, an option contract obligates the seller to deliver shares (for a sold or "short" call) or buy shares (for a sold or "short" put) of the underlying asset at a specified price (the "strike price").
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section "Fund Portfolio" below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see "Additional Information about the Funds – Exchange Traded Options Portfolio."

The Fund's options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a "synthetic covered call" strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund's synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government. These instruments are used as collateral for the Fund’s derivative investments. They will also generate income.	6-month to 2-year maturities
----------------------------------	---	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund’s net assets and the market value of the options package is expected to be between 0% and 50% of the Fund’s net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to PLTR equal to at least 100% of the Fund’s total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to PLTR.

The Fund is classified as “non-diversified” under the 1940 Act.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Palantir Technologies Inc. (“PLTR”)

PLTR builds software that empowers organizations to effectively integrate their data, decisions, and operations at scale. PLTR is listed on the The Nasdaq Stock Market LLC (“Nasdaq”). Per PLTR’s most recent Form 10-K filing, the aggregate market value of common stock held by non-affiliates of PLTR (based on the last reported sale price of its class A common stock on June 28, 2024, on the Nasdaq) was approximately \$51.5 billion.

PLTR is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the SEC by PLTR pursuant to the Exchange Act can be located by reference to SEC file number 001-39540 through the SEC’s website at www.sec.gov. In addition, information regarding PLTR may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of PLTR or other securities of PLTR. The Fund has derived all disclosures contained in this document regarding PLTR from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to PLTR. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding PLTR is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of PLTR (and therefore the price of PLTR at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning PLTR could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of PLTR.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH PALANTIR TECHNOLOGIES INC.

Due to the Fund’s investment strategy, the Fund’s investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to PLTR. As of the date of the Prospectus, PLTR is assigned to the software industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

PLTR Risk. The Fund invests in options contracts that are based on the value of PLTR. This subjects the Fund to certain of the same risks as if it owned shares of PLTR, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of PLTR, the Fund may also be subject to the following risks:

Indirect Investment in PLTR Risk. PLTR is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of PLTR but will be exposed to the performance of PLTR (the Underlying Security). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

PLTR Trading Risk. The trading price of PLTR may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of PLTR may be traded by short sellers which may put pressure on the supply and demand for the common stock of PLTR, further influencing volatility in its market price. Public perception and other factors outside of the control of PLTR may additionally impact PLTR's stock price due to PLTR garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against PLTR in the past. While PLTR continues to defend such actions, any judgment against PLTR, or any future stockholder litigation could result in substantial costs and a diversion of the management of PLTR's attention and resources. If PLTR trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

PLTR Performance Risk. PLTR may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of PLTR to decline. PLTR provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance PLTR provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If PLTR's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by PLTR could decline significantly.

Software Industry Risk. The software industry can be significantly affected by intense competition, aggressive pricing, technological innovations, and product obsolescence. Companies in the software industry are subject to significant competitive pressures, such as aggressive pricing, new market entrants, competition for market share, short product cycles due to an accelerated rate of technological developments and the potential for limited earnings and/or falling profit margins. These companies also face the risks that new services, equipment or technologies will not be accepted by consumers and businesses or will become rapidly obsolete. These factors can affect the profitability of these companies and, as a result, the value of their securities. Also, patent protection is integral to the success of many companies in this industry, and profitability can be affected materially by, among other things, the cost of obtaining (or failing to obtain) patent approvals, the cost of litigating patent infringement and the loss of patent protection for products (which significantly increases pricing pressures and can materially reduce profitability with respect to such products). In addition, many software companies have limited operating histories. Prices of these companies' securities historically have been more volatile than other securities, especially over the short term.

AI Platform Risk. PLTR has launched an AI (artificial intelligence) platform, which subjects PLTR to additional risks, including challenges in developing and deploying new technologies to meet customer needs and ensuring compatibility with third-party products and services. PLTR may struggle to hire, retain, and train qualified personnel, which is crucial for meeting customer demand. The use of AI could lead to reputational harm or liability issues, and there may be difficulties in obtaining, maintaining, protecting, and enforcing intellectual property rights. Additionally, the platform could encounter real or perceived errors, failures, defects, or bugs, and reliance on third-party technology could pose risks if it becomes difficult to replace or causes errors. Finally, PLTR's AI platform will be subject to complex and evolving U.S. and non-U.S. laws and regulations regarding privacy, data protection, security, and technology protection.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves

investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract's expiration date affects the impact of the potential options contract income on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund's

NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to

supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund’s NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange “circuit breaker” rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund’s holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund’s expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund’s assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

Newer Fund Risk. The Fund is a recently organized management investment company with limited operating history. As a result, prospective investors have a limited track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund’s overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund’s ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Market Events Risk. The Fund’s investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health

issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (the Underlying Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

When available, information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

YieldMax™ RBLX Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of the Roblox Corporation ("RBLX" or the "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	0.99%

- ⁽¹⁾ The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.
- ⁽²⁾ Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of Roblox Corporation (NYSE: RBLX) ("RBLX" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to RBLX regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of RBLX, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of RBLX increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of RBLX,
- current income from the option premiums, and

- at most times, a limit on the Fund's participation in gains, if any, of the share price returns of RBLX.

For more information, see sections "The Fund's Use of Underlying Security Option Contracts," "Synthetic Covered Call Strategy" and "Synthetic Covered Call Spread Strategy" below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security's stock price, the Fund's portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund's strategy will capture only a portion of its potential gains if the Underlying Security's stock price increase in value.**
- **The Fund's strategy is subject to all potential losses if the Underlying Security's stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund's Use of Underlying Security Option Contracts

As part of the Fund's synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® ("FLEX") call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the "strike price").
- If exercised, an option contract obligates the seller to deliver shares (for a sold or "short" call) or buy shares (for a sold or "short" put) of the underlying asset at a specified price (the "strike price").
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section "Fund Portfolio" below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see "Additional Information about the Funds – Exchange Traded Options Portfolio."

The Fund's options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a "synthetic covered call" strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund's synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	<p>Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government.</p> <p>These instruments are used as collateral for the Fund’s derivative investments.</p> <p>They will also generate income.</p>	6-month to 2-year maturities
----------------------------------	--	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund’s net assets and the market value of the options package is expected to be between 0% and 50% of the Fund’s net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to RBLX equal to at least 100% of the Fund’s total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to RBLX.

The Fund is classified as “non-diversified” under the 1940 Act.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Roblox Corporation (“RBLX”)

RBLX operates an online platform that allows users to create, share, and play games and experiences using its proprietary development tools. RBLX is listed on the New York Stock Exchange (“NYSE”). Per RBLX’s most recent Form 10-K filing, the aggregate market value of the voting Class A common equity held by non-affiliates of RBLX (based on the last reported sale price of its common stock on June 28, 2024, on the NYSE) was approximately \$17.4 billion.

RBLX is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the SEC by RBLX pursuant to the Exchange Act can be located by reference to SEC file number 001-39763 through the SEC’s website at www.sec.gov. In addition, information regarding RBLX may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of RBLX or other securities of RBLX. The Fund has derived all disclosures contained in this document regarding RBLX from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to RBLX. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding RBLX is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of RBLX (and therefore the price of RBLX at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning RBLX could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of RBLX.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH ROBLOX CORPORATION.

Due to the Fund’s investment strategy, the Fund’s investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to RBLX. As of the date of the Prospectus, RBLX is assigned to the entertainment industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

RBLX Risk. The Fund invests in options contracts that are based on the value of RBLX. This subjects the Fund to certain of the same risks as if it owned shares of RBLX, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of RBLX, the Fund may also be subject to the following risks:

Indirect Investment in RBLX Risk. RBLX is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of RBLX but will be exposed to the performance of RBLX (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

RBLX Trading Risk. The trading price of RBLX may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of RBLX may be traded by short sellers which may put pressure on the supply and demand for the common stock of RBLX, further influencing volatility in its market price. Public perception and other factors outside of the control of RBLX may additionally impact RBLX's stock price due to RBLX garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against RBLX in the past. While RBLX continues to defend such actions, any judgment against RBLX, or any future stockholder litigation could result in substantial costs and a diversion of the management of RBLX's attention and resources. If RBLX trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

Operational and Execution Risks: RBLX is subject to various risks, including dependence on user engagement, as its success hinges on retaining a large and active user base whose preferences may shift. The company must also effectively manage and moderate user-generated content to prevent the dissemination of inappropriate material, which could tarnish its reputation and deter users. Ensuring robust platform security and privacy is crucial, especially given its predominantly young audience, with failures potentially leading to legal issues and a loss of trust. Regulatory changes in data privacy, consumer protection, and online safety present ongoing challenges. Additionally, Roblox operates in a competitive, rapidly evolving industry, necessitating continual technological innovation to stay ahead. The company's revenue heavily relies on in-platform purchases using its virtual currency, making it vulnerable to changes in monetization strategies or disruptions in payment systems, highlighting the importance of adapting to maintain growth and sustainability in the online gaming and content creation market.

Interactive Media and Services Industry Risks: The interactive media and services industry faces significant risks due to intense market competition, evolving regulatory environments, and reliance on advanced technology and infrastructure. Companies must navigate a complex landscape where technological advancements and new entrants constantly introduce competitive pressures. Regulatory changes, particularly those related to data privacy, content moderation, and intellectual property, can impose substantial compliance costs and legal liabilities. Additionally, the industry depends heavily on the security and reliability of its technological infrastructure; any disruptions or breaches can lead to operational challenges and compromised user information. Attracting, engaging, and retaining users is crucial for success, and failure to manage content moderation effectively can result in legal, regulatory, and reputational risks.

Economic conditions, international operations, and the need for continuous innovation further complicate the industry's risk profile. Economic downturns and fluctuations in consumer spending can reduce demand for interactive media and services, affecting revenue and profitability. Operating globally exposes companies to political instability, currency fluctuations, and varying regulatory standards. The industry must invest in research and development to stay competitive, but these investments come with no guarantees of success. Additionally, cybersecurity threats pose a significant risk, with potential for data breaches and financial losses. Implementing robust cybersecurity measures is essential to mitigate these threats and protect valuable digital assets.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as “rolling.” If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared (“cleared derivatives”). In a transaction involving cleared derivatives, the Fund’s counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house (“clearing members”) can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member’s individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund’s clearing member. In addition, although clearing members guarantee performance of their clients’ obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member’s bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member’s customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund’s behalf, which heightens the risks associated with a clearing member’s default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund’s behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund’s behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund’s NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options’ expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund’s NAV, will change. However, it is not expected for the Fund’s NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract’s expiration date affects the impact of the potential options contract income on the Fund’s NAV, which may not be in full effect until the expiration date of the Fund’s options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund’s NAV, the Fund generally anticipates that the rate of change in the Fund’s NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund’s investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund’s NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be

significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (the Underlying Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrichelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

When available, information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

YieldMax™ SHOP Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of shares of Shopify Inc. ("SHOP" or the "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	0.99%

- (1) The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.
- (2) Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of shares of SHOP (NYSE: SHOP) ("SHOP" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to SHOP regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of SHOP, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of SHOP increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of SHOP,
- current income from the option premiums, and

- at most times, a limit on the Fund's participation in gains, if any, of the share price returns of SHOP.

For more information, see sections "The Fund's Use of Underlying Security Option Contracts," "Synthetic Covered Call Strategy" and "Synthetic Covered Call Spread Strategy" below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security's stock price, the Fund's portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund's strategy will capture only a portion of its potential gains if the Underlying Security's stock price increase in value.**
- **The Fund's strategy is subject to all potential losses if the Underlying Security's stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund's Use of Underlying Security Option Contracts

As part of the Fund's synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® ("FLEX") call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the "strike price").
- If exercised, an option contract obligates the seller to deliver shares (for a sold or "short" call) or buy shares (for a sold or "short" put) of the underlying asset at a specified price (the "strike price").
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section "Fund Portfolio" below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see "Additional Information about the Funds – Exchange Traded Options Portfolio."

The Fund's options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a "synthetic covered call" strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund's synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government. These instruments are used as collateral for the Fund's derivative investments. They will also generate income.	6-month to 2-year maturities
----------------------------------	---	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund's net assets and the market value of the options package is expected to be between 0% and 50% of the Fund's net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to SHOP equal to at least 100% of the Fund's total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to SHOP.

The Fund is classified as "non-diversified" under the 1940 Act.

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Shopify Inc. ("SHOP")

SHOP is a Canadian multinational e-commerce company headquartered in Ottawa, Ontario. SHOP is listed on the New York Stock Exchange ("NYSE"). The aggregate market value of SHOP's Class A Subordinate Voting Shares held by non-affiliates, based on the closing price of the Class A Subordinate Voting Shares as reported by the NYSE on June 28, 2024, was \$79.8 billion.

SHOP is registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Information provided to or filed with the SEC by SHOP pursuant to the Exchange Act can be located by reference to the SEC file number 001-37400 through the SEC's website at www.sec.gov. In addition, information regarding SHOP may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of SHOP or other securities of SHOP. The Fund has derived all disclosures contained in this document regarding SHOP from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to SHOP. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding SHOP is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of SHOP (and therefore the price of SHOP at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning SHOP could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of SHOP.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH SHOPIFY INC.

Due to the Fund's investment strategy, the Fund's investment exposure is concentrated in (or substantially exposed to) the same industry or group of industries as SHOP. As of the date of the Prospectus, SHOP is assigned to the information technology services industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which they appear.

SHOP Risk. The Fund invests in options contracts that are based on the value of SHOP. This subjects the Fund to certain of the same risks as if it owned shares of SHOP, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of SHOP, the Fund may also be subject to the following risks:

Indirect Investment in SHOP Risk. SHOP is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of SHOP but will be exposed to the performance of SHOP (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

SHOP Trading Risk. The trading price of SHOP may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of SHOP may be traded by short sellers which may put pressure on the supply and demand for the common stock of SHOP, further influencing volatility in its market price. Public perception and other factors outside of the control of SHOP may additionally impact SHOP's stock price due to SHOP garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against SHOP in the past. While SHOP continues to defend such actions, any judgment against SHOP, or any future stockholder litigation could result in substantial costs and a diversion of the management of SHOP's attention and resources. If SHOP trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

SHOP Performance Risk. SHOP may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of SHOP to decline. SHOP provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance SHOP provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If SHOP's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by SHOP could decline significantly.

Internet & Direct Marketing Retail Risk. Companies, such as SHOP, that operate via the internet or direct marketing (e.g., online consumer services, online retail, travel) segments are subject to fluctuating consumer demand. Unlike traditional brick and mortar retailers, online marketplaces and retailers must assume shipping costs or pass such costs to consumers. Consumer access to price information for the same or similar products may cause companies that operate in the online marketplace, retail and travel segments to reduce profit margins in order to compete. Due to the nature of their business models, companies that operate in the online marketplace, retail, and travel segments may also be subject to heightened cybersecurity risk, including the risk of theft or damage to vital hardware, software, and information systems. The loss or public dissemination of sensitive customer information or other proprietary data may negatively affect the financial performance of such companies to a greater extent than traditional brick and mortar retailers. As a result of such companies being web-based and the fact that they process, store, and transmit large amounts of data, including personal information, for their customers, failure to prevent or mitigate data loss or other security breaches, including breaches of vendors' technology and systems, could expose companies that operate via the internet or direct marketing retail to a risk of loss or misuse of such information, adversely affect their operating results, result in litigation or potential liability, and otherwise harm their businesses.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as “rolling.” If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared (“cleared derivatives”). In a transaction involving cleared derivatives, the Fund’s counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house (“clearing members”) can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member’s individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund’s clearing member. In addition, although clearing members guarantee performance of their clients’ obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member’s bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member’s customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund’s behalf, which heightens the risks associated with a clearing member’s default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund’s behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund’s behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund’s NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options’ expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund’s NAV, will change. However, it is not expected for the Fund’s NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract’s expiration date affects the impact of the potential options contract income on the Fund’s NAV, which may not be in full effect until the expiration date of the Fund’s options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund’s NAV, the Fund generally anticipates that the rate of change in the Fund’s NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund’s investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund’s NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

Foreign Investment Risk. Because the Fund has indirect exposure to a foreign company, the Fund may be subject to risks associated with foreign investments.

- *Currency Risk:* Indirect exposure to foreign currencies subjects the Fund to the risk that currencies will decline in value relative to the U.S. dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates and the imposition of currency controls or other political developments in the U.S. or abroad.
- *Foreign Market and Trading Risk:* The trading markets for many foreign securities are not as active as U.S. markets and may have less governmental regulation and oversight.
- *Foreign Securities Risk:* Investments in securities of non-U.S. issuers involve certain risks that may not be present with investments in securities of U.S. issuers, such as risk of loss due to foreign currency fluctuations or to political or economic instability, as well as varying regulatory requirements applicable to investments in non-U.S. issuers. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Non-U.S. issuers may also be subject to different regulatory, accounting, auditing, financial reporting and investor protection standards than U.S. issuers.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments

can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (the Underlying Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

When available, information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

YieldMax™ SMCI Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of the Super Micro Computer, Inc. ("SMCI" or "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	0.99%

- ⁽¹⁾ The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.
- ⁽²⁾ Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available. For the fiscal period from September 11, 2024 (commencement of operations) to October 31, 2024, the Fund's portfolio turnover rate was 0% of the average value of its portfolio.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of Super Micro Computer, Inc. (Nasdaq Global Select Market: SMCI) ("SMCI" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to SMCI regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of SMCI, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of SMCI increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of SMCI,

- current income from the option premiums, and
- at most times, a limit on the Fund's participation in gains, if any, of the share price returns of SMCI.

For more information, see sections "The Fund's Use of Underlying Security Option Contracts," "Synthetic Covered Call Strategy" and "Synthetic Covered Call Spread Strategy" below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security's stock price, the Fund's portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund's strategy will capture only a portion of its potential gains if the Underlying Security's stock price increase in value.**
- **The Fund's strategy is subject to all potential losses if the Underlying Security's stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund's Use of Underlying Security Option Contracts

As part of the Fund's synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® ("FLEX") call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the "strike price").
- If exercised, an option contract obligates the seller to deliver shares (for a sold or "short" call) or buy shares (for a sold or "short" put) of the underlying asset at a specified price (the "strike price").
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section "Fund Portfolio" below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see "Additional Information about the Funds – Exchange Traded Options Portfolio."

The Fund's options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a "synthetic covered call" strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund's synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio (All options are based on the value of the Underlying Security)	Holdings (Investment Terms)	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government. These instruments are used as collateral for the Fund’s derivative investments. They will also generate income.	6-month to 2-year maturities
----------------------------------	---	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund’s net assets and the market value of the options package is expected to be between 0% and 50% of the Fund’s net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to SMCI equal to at least 100% of the Fund’s total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to SMCI.

The Fund is classified as “non-diversified” under the 1940 Act.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Super Micro Computer, Inc. (“SMCI”)

SMCI specializes in designing and manufacturing high-performance server solutions and advanced computing technologies for enterprise, data center, cloud computing, and AI applications. SMCI is listed on the Nasdaq Global Select Market (“Nasdaq”). Per SMCI’s most recent Form 10-K filing, the aggregate market value of the voting and non-voting common equity held by non-affiliates of SMCI (based on the last reported sale price of its common stock on December 31, 2023 on the Nasdaq Global Select Market) was approximately \$13.5 billion.

SMCI is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the SEC by SMCI pursuant to the Exchange Act can be located by reference to SEC file number 001-33383 through the SEC’s website at www.sec.gov. In addition, information regarding SMCI may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of SMCI or other securities of SMCI. The Fund has derived all disclosures contained in this document regarding SMCI from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to SMCI. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding SMCI is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of SMCI (and therefore the price of SMCI at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning SMCI could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of SMCI.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH SUPER MICRO COMPUTER, INC.

Due to the Fund’s investment strategy, the Fund’s investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to SMCI. As of the date of the Prospectus, SMCI is assigned to the technology hardware, storage & peripherals industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

SMCI Risk. The Fund invests in options contracts that are based on the value of SMCI. This subjects the Fund to certain of the same risks as if it owned shares of SMCI, even though it does not. By virtue of the Fund’s investments in options contracts that are based on the value of SMCI, the Fund may also be subject to the following risks:

Indirect Investment in SMCI Risk. SMCI is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of SMCI but will be exposed to the performance of SMCI (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

SMCI Trading Risk. The trading price of SMCI may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of SMCI may be traded by short sellers which may put pressure on the supply and demand for the common stock of SMCI, further influencing volatility in its market price. Public perception and other factors outside of the control of SMCI may additionally impact SMCI’s stock price due to SMCI garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company’s securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against SMCI in the past. While SMCI continues to defend such actions, any judgment against SMCI, or any future stockholder litigation could result in substantial costs and a diversion of the management of SMCI’s attention and resources. If SMCI trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

Operational and Execution Risks: SMCI faces several operational and execution risks that could adversely impact its business operations and financial performance. Adverse economic conditions may harm the company’s overall business, while recent events in eastern Europe and the Taiwan Strait pose additional challenges and uncertainties. Fluctuations in quarterly operating results, unpredictability in revenue and margins, and the concentration of larger customers and sales opportunities are factors contributing to operational volatility. Additionally, failure to meet financial guidance, challenges in securing favorable financing, and risks associated with inventory management and supply chain disruptions further compound these risks. Cybersecurity threats, difficulties in expanding and retaining the sales force, and potential conflicts of interest with affiliated companies add complexity to operational management. Moreover, reliance on key personnel, potential confusion in sales channels, and challenges in attracting and integrating key employees also contribute to operational uncertainties.

Strategic and Industry Risks: Expanding international operations, managing growth effectively, and responding to technological trends are critical strategic challenges for SMCI. The company operates in a highly competitive market, and industry consolidation could intensify competition. Dependence on suppliers, indirect sales channels, and the need for continuous product innovation further highlight industry-specific risks. Quality control issues, fluctuations in corporate ventures, and challenges in managing international business operations also pose strategic concerns for SMCI.

Additional & Technology-Related Risks. SMCI faces additional risks specific to its operations, including significant reliance on a limited number of key suppliers, which could disrupt production if supply chain issues arise. SMCI is also vulnerable to rapid technological changes in the industry, necessitating continuous innovation and investment in research and development. SMCI’s global operations expose it to geopolitical risks, currency fluctuations, and compliance with diverse regulatory environments. Moreover, SMCI’s dependence on key personnel means that the loss of any critical team members could adversely affect its business.

Delisting Risk. SMCI announced in 2024 that it received a notification letter from Nasdaq stating that SMCI is not in compliance with Nasdaq listing rule 5250(c)(1), which requires timely filing of reports with the U.S. Securities and Exchange Commission. The letter, dated September 17, 2024, was sent as a result of SMCI’s delay in filing its Annual Report on Form 10-K for the period ending June 30, 2024 (the “Form 10-K”). SMCI subsequently filed its Form 10-K and its Quarterly Reports on Form 10-Q for the first two quarters of its 2025 fiscal year on February 25, 2025 and is therefore back in compliance; however, should SMCI fail to comply with the rule within required timelines going forward it’s possible SMCI stock could be delisted which would prevent the Fund from continuing to operate.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund’s investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund’s other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves

investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract's expiration date affects the impact of the potential options contract income on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund's

NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to

supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund’s NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange “circuit breaker” rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund’s holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund’s expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund’s assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

Newer Fund Risk. The Fund is a recently organized management investment company with limited operating history. As a result, prospective investors have a limited track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund’s overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund’s ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Market Events Risk. The Fund’s investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health

issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (the Underlying Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

Information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

YieldMax™ TSM Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income.

The Fund's secondary investment objective is to seek exposure to the share price of the ADR of Taiwan Semiconductor Manufacturing Company Ltd. ("TSM" or "Underlying Security"), which is generally subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	0.99%

- ⁽¹⁾ The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all of the Fund's expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), litigation expenses, and other non-routine or extraordinary expenses.
- ⁽²⁾ Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available. For the fiscal period from August 20, 2024 (commencement of operations) to October 31, 2024, the Fund's portfolio turnover rate was 7% of the average value of its portfolio.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of the ADR of Taiwan Semiconductor Manufacturing Company Ltd. (NYSE: TSM) ("TSM" or the "Underlying Security"), which is generally subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to TSM regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of TSM, which is generally subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. The Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of TSM increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of TSM,
- current income from the option premiums, and
- at most times, a limit on the Fund's participation in gains, if any, of the share price returns of TSM.

For more information, see sections "The Fund's Use of Underlying Security Option Contracts," "Synthetic Covered Call Strategy" and "Synthetic Covered Call Spread Strategy" below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security's stock price, the Fund's portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund's strategy will capture only a portion of its potential gains if the Underlying Security's stock price increase in value.**
- **The Fund's strategy is subject to all potential losses if the Underlying Security's stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund's Use of Underlying Security Option Contracts

As part of the Fund's synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLExible EXchange® ("FLEX") call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the "strike price").
- If exercised, an option contract obligates the seller to deliver shares (for a sold or "short" call) or buy shares (for a sold or "short" put) of the underlying asset at a specified price (the "strike price").
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section "Fund Portfolio" below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see "Additional Information about the Funds – Exchange Traded Options Portfolio."

The Fund's options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a "synthetic covered call" strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund's synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (<i>i.e.</i>, the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates

U.S Treasury Securities and Cash	Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government. These instruments are used as collateral for the Fund's derivative investments. They will also generate income.	6-month to 2-year maturities
----------------------------------	---	------------------------------

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund's net assets and the market value of the options package is expected to be between 0% and 50% of the Fund's net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to TSM equal to at least 100% of the Fund's total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to TSM.

The Fund is classified as "non-diversified" under the 1940 Act.

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Taiwan Semiconductor Manufacturing Company Ltd. ("TSM")

TSM is a dedicated foundry in the semiconductor industry which engages mainly in the manufacturing, sales, packaging, testing and computer-aided design of integrated circuits and other semiconductor devices and the manufacturing of masks. TSM is listed on the New York Stock Exchange ("NYSE").

The American Depositary Share of TSM is registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Information provided to or filed with the SEC by TSM pursuant to the Exchange Act can be located by reference to the SEC file number 001-14700 through the SEC's website at www.sec.gov. In addition, information regarding TSM may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the shares of TSM or other securities of TSM. The Fund has derived all disclosures contained in this document regarding TSM from the publicly available documents. None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such publicly available offering documents or made any due diligence inquiry regarding such documents with respect to TSM. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding TSM is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of TSM (and therefore the price of TSM at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning TSM could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of TSM.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH TAIWAN SEMICONDUCTOR MANUFACTURING COMPANY LTD.

Due to the Fund's investment strategy, the Fund's investment exposure is concentrated in (or substantially exposed to) the same industry as that assigned to TSM. As of the date of the Prospectus, TSM is assigned to the semiconductors & semiconductor equipment industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which they appear.

TSM Risk. The Fund invests in options contracts that are based on the value of TSM. This subjects the Fund to certain of the same risks as if it owned shares of TSM, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of TSM, the Fund may also be subject to the following risks:

Indirect Investment in TSM Risk. TSM is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of TSM but will be exposed to the performance of TSM (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

TSM Trading Risk. The trading price of TSM may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of TSM may be traded by short sellers which may put pressure on the supply and demand for the common stock of TSM, further influencing volatility in its market price. Public perception and other factors outside of the control of TSM may additionally impact TSM's stock price due to TSM garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against TSM in the past. While TSM continues to defend such actions, any judgment against TSM, or any future stockholder litigation could result in substantial costs and a diversion of the management of TSM's attention and resources. If TSM trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

TSM Performance Risk. TSM may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of TSM to decline. TSM provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance TSM provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If TSM's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by TSM could decline significantly.

Semiconductor Company Risk. Competitive pressures may have a significant effect on the financial condition of semiconductor companies and, as product cycles shorten and manufacturing capacity increases, these companies may become increasingly subject to aggressive pricing, which hampers profitability. Reduced demand for end-user products, under-utilization of manufacturing capacity, and other factors could adversely impact the operating results of companies in the semiconductor sector. Semiconductor companies typically face high capital costs and may be heavily dependent on intellectual property rights. The semiconductor sector is highly cyclical, which may cause the operating results of many semiconductor companies to vary significantly. The stock prices of companies in the semiconductor sector have been and likely will continue to be extremely volatile.

Geopolitical Risks. TSM is subject to substantial geopolitical risks due to the complex and often tense relationship between Taiwan and China. The potential for military conflict or increased political pressure from China poses a substantial threat to TSM's operations and supply chain stability. Additionally, any escalation in cross-strait tensions could lead to economic sanctions, trade restrictions, or other regulatory measures that might disrupt TSM's business activities and international partnerships. TSM's reliance on global markets also means that geopolitical instability could affect investor confidence and result in fluctuations in its share price and market value. Furthermore, TSM's operational concentration in Taiwan makes it particularly vulnerable to regional political and military developments, which could severely impact its production capabilities and overall business continuity.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its

investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which the Fund will participate in increases in value experienced by the Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the Fund will likely not experience that increase to the same extent and may significantly underperform the Underlying Security over the Call Period. Additionally, because the Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period, but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in the Underlying Security gains the Fund will experience will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the options contract's expiration date affects the impact of the potential options contract income on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to the Fund's NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than that experienced by the Underlying Security.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Call Strategy Risks. The path dependency (i.e., the continued use) of the Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both the Fund's participation in the positive price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

Foreign Investment Risk. Because the Fund has indirect exposure to the ADR of a foreign company, the Fund may be subject to risks associated with foreign investments.

- *Currency Risk:* Indirect exposure to foreign currencies subjects the Fund to the risk that currencies will decline in value relative to the U.S. dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates and the imposition of currency controls or other political developments in the U.S. or abroad.
- *Depository Receipts Risk:* Investment in ADRs may be less liquid than the underlying shares in their primary trading market.
- *Foreign Market and Trading Risk:* The trading markets for many foreign securities are not as active as U.S. markets and may have less governmental regulation and oversight.
- *Foreign Securities Risk:* Investments in securities of non-U.S. issuers involve certain risks that may not be present with investments in securities of U.S. issuers, such as risk of loss due to foreign currency fluctuations or to political or economic instability, as well as varying regulatory requirements applicable to investments in non-U.S. issuers. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Non-U.S. issuers may also be subject to different regulatory, accounting, auditing, financial reporting and investor protection standards than U.S. issuers.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on

the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

Newer Fund Risk. The Fund is a recently organized management investment company with limited operating history. As a result, prospective investors have a limited track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (the Underlying Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

Information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT THE FUNDS

Investment Objective

Each Fund’s primary investment objective is to seek current income, with a secondary investment objective to seek exposure to the share price of its Underlying Security, which is generally subject to a limit on potential investment gains.

An investment objective is fundamental if it cannot be changed without the consent of the holders of a majority of the outstanding Shares. No Fund’s investment objective has been adopted as a fundamental investment policy and therefore each Fund’s investment objective may be changed without the consent of that Fund’s shareholders upon approval by the Board of Trustees (the “Board”) of Tidal Trust II (the “Trust”) and at least 60 days’ written notice to shareholders.

Principal Investment Strategies

Each Fund has an 80% policy that, under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to the underlying security referenced in the Fund’s investment objective.

For each Fund’s 80% test, the notional value of its options contracts will be used. “Notional value” refers to the “face” value of a Fund investment, rather than the amount of capital the Fund has actually committed. It represents the total value of the Fund’s position, rather than its equity in that position. Essentially, it reflects the full value of a leveraged position in the market, even if the Fund uses a fraction of that amount as collateral.

Each Fund’s 80% policy is non-fundamental and can be changed without shareholder approval. However, Fund shareholders would be given at least 60 days’ notice prior to any such change.

Synthetic Exposure to Underlying Security Price Returns

- The Funds purchase call option contracts on the Underlying Securities generally having one-month to six-month terms and strike prices equal to the then-current price of the Underlying Securities at the time of the purchases to provide the Funds indirect exposure to the upside price returns of the Underlying Securities. As a buyer of call option contracts, each Fund pays a premium to the seller of the options contracts to obtain the right to participate in the price returns of the Underlying Security beyond the strike price of the purchased call option contract at expiration (or earlier, if the Fund closes the option contract prior to expiration); and
- Each Fund simultaneously sells put option contracts on its Underlying Security to help pay the premium of the purchased call option contracts on the Underlying Security. Each Fund sells put option contracts that also generally have one-month to six-month terms and strike prices equal to the then-current price of the Underlying Security at the time of the sales to provide the Fund exposure to the downside price returns of the Underlying Security. As a seller of a put option contract, each Fund receives a premium from the buyer of the option contract in exchange for the Fund's obligation, if exercised, to purchase the Underlying Security at the strike price if the buyer exercises the option contract.
- The combination of the purchased call options and the sold put options provides each Fund with indirect investment exposure equal to approximately 100% of the applicable Underlying Security for the duration of the applicable options exposure.

Generating Monthly Income

- Each Fund sells call option contracts that are based on the value of its Underlying Security to generate income via option premiums. On a monthly basis or more frequently, a Fund will sell call option contracts on the Underlying Security with expiration dates of approximately one month or less in the future at strike prices that are approximately equal to 0%-15% above the then-current share price of the Underlying Security. By doing so, a Fund gives up the potential to fully participate in the Underlying Security gains, if any, beyond the strike price of the sold call options in exchange for income received in the form of call option premium. If the price of the Underlying Security is less than the call option's strike price at the expiration of the contract, the option contract will expire worthless and the Fund's return on the sold call position will be the premium originally received for selling the option contract. If the price of the Underlying Security is greater than the strike price at the expiration of the option contract, the Fund will forgo all of the returns that exceed the strike price of the option contract, and there will be a cost to "close out" the now in-the-money call options. The short call options are "closed out" (repurchased) prior to their expiration so that the Fund will not get assigned the, now, in-the-money call options. At times the call options may be "rolled" instead of simply closed. This is to say, new call options are simultaneously sold to open a new short call position, while the previously sold calls are repurchased to close out the original short call position.
- The Funds purchase multiple series of U.S. Treasury securities to collateralize the options contracts they sell. The U.S. Treasury securities also provide monthly income.

Covered Call Strategy:

When employing the covered call strategy, each Fund's sale of call option contracts to generate income will limit the degree to which the Fund will participate in increases in the share price of the Underlying Security. **This means that if the Underlying Security experiences an increase in the share price, the Fund will likely not experience that increase to the same extent (i.e., there is no participation beyond the level of the strike price of the sold call option contracts) and may result in the Fund significantly underperforming the Underlying Security.** The degree of participation in the Underlying Security gains will depend on the strike price of the short call option contracts and prevailing market conditions, especially market volatility, at the time the Fund sells the call option contracts. The potential for upside returns on the Underlying Security will also depend on whether a Fund fully "covers" its potential upside price return exposure to the Underlying Security by virtue of its sold call option contracts. If a Fund fully covers the upside price return exposure to the Underlying Security, the Fund's potential upside to the Underlying Security's price returns will be completely capped at the sold call options' strike price, meaning the Fund may forgo all price returns experienced by the Underlying Security beyond the strike price. If a Fund partially covers its potential upside return exposure with the sold call option, the Fund will have muted returns beyond the strike price of the sold call option to the extent that the Underlying Security's share price appreciates beyond the strike price.

The sale of call option contracts will offset losses experienced by an Underlying Security only to the extent of premiums received from such sold call option contracts. The Funds expect to participate in all the Underlying Security price return losses over the duration of the options contracts (e.g., if the Underlying Security decreases in value by 5%, the Fund should be expected to decrease in value by approximately 5%, before Fund fees and expenses) beyond the income received from the sold call option contract premiums.

Covered Call Spread Strategy:

When employing the *covered* call spread strategy, a Fund's sale of call option contracts, paired with the purchase of higher strike call option contracts, aims to generate income while still allowing for potential indirect participation in increases in the share price of its Underlying Security above the strike of the higher price call option which was bought. **However, this strategy may nonetheless still**

limit the degree to which the Fund fully participates in such increases as the Fund will not participate (directly or indirectly) in any appreciation between the strikes of the sold call option and bought call option.

The sale of credit call spreads will offset losses experienced by an Underlying Security's share price only to the extent of premiums received from such sold call option contracts. Each Fund expects to participate in all of its Underlying Security's losses beyond the income received from the sold call spreads contract premiums. For instance, if a Fund's Underlying Security decreases in value by 5%, the Fund should be expected to decrease in value by approximately 5%, before Fund fees and expenses, beyond the income received from the sold call spreads contract premiums.

Examples:

The following table provides an overview of a Fund's anticipated performance versus various changes in the share price of its Underlying Security when the Covered Call Strategy is employed.

Price Movement of Underlying Security	Anticipated Fund Performance & Performance Relative to Underlying Security*
Slow rise in share price	Increase in Fund NAV – Outperformance vs Underlying Security
Decline in share price or flat performance	Decline or flat Fund NAV – Outperformance vs Underlying Security
Significant price appreciation	Increase in Fund NAV – Significant underperformance vs Underlying Security

The following table provides an overview of a Fund's anticipated performance versus various changes in the share price of its Underlying Security when the *Covered* Call Spread Strategy is employed.

Price Movement of Underlying Security	Anticipated Fund Performance & Performance Relative to Underlying Security*
Slow rise in share price	Decline or flat Fund NAV – Outperformance vs Underlying Security
Decline in share price or flat performance	Decline or flat Fund NAV – Outperformance vs Underlying Security
Significant price appreciation	Increase in Fund NAV – Underperformance to Underlying Security

* A Fund's actual NAV performance and performance against the price of its Underlying Security may differ, primarily due to path dependency and strike selection as discussed above. Also, please see Price Participation Risk and Call Writing Strategy Risk.

Potential Upside Participation – Covered Call Strategy vs Covered Call Spread Strategy

To further illustrate how the Fund's covered call spread strategy results in greater upside participation, the following examples compare the outcomes of a hypothetical covered call and a covered call spread. These scenarios demonstrate how a Fund's use of its covered call spread strategy can lead to increased potential appreciation of its Underlying Security's share price while still generating net premium income. Additionally, the examples highlight the estimated amount or limits on the greater participation in potential appreciation as compared to a call option contract strategy.

Examples:

Scenario 1 (Covered Call Strategy): Selling a Covered Call on an Underlying Security

- Underlying Security Share Price: \$100
- Strike Price of Sold Covered Call: \$105
- Premium Received: \$2

Outcome if the share price of the Underlying Security increases to \$110:

1. Share Price Increase: The Fund does not participate in the Underlying Security's gain above \$105 because the Fund sold a call struck at \$105.
 - Gain on Underlying Security: \$5 (i.e., \$105 - \$100 = \$5)

2. Call Premium: Fund retains the initial \$2 premium.
3. Total Gain: \$7 (i.e., \$5 gain on Underlying Security, plus \$2 premium)

Scenario 2 (Covered Call Spread Strategy): Selling a Covered Call Spread on an Underlying Security

- Underlying Security Share Price: \$100
- Strike Prices of Covered Call Spread: Sold Call at \$100, Purchased Call at \$102.50
- Net Premium Received: \$2

Outcome if the share price of the Underlying Security increases to \$110:

1. Share Price Increase: The Fund does not participate in the Underlying Security's gain between \$100 and \$102.50 because the Fund sold a call struck at \$100 and purchased a call struck at \$102.50.
2. Net Premium: The Fund retains the net premium of \$2.
3. Long Call Gain: The Fund participates in the Underlying Security's gain above \$102.50 because the Fund purchased a call struck at \$102.50, which results in a \$7.50 gain (i.e., $110 - 102.50 = 7.50$)
4. Total Gain: \$9.50 (i.e., share price increase \$0, plus \$2 net premium, plus \$7.50 gain on the purchased call)

Comparison:

- **Covered Call:** Gain is capped at \$7, as participation in the Underlying Security's gain is capped at the sold call's \$105 strike price.
- **Covered Call Spread:** Gain is \$9.50, as the call spread provides additional upside participation beyond the purchased call's \$102.50 strike price. Furthermore, the Fund's gain potential is not capped (i.e., if the value of the Underlying Security's share price increases further, the Fund's gain would also increase further).

Conclusion:

In this scenario where the Underlying Security increases to \$110, the covered call spread strategy yields a higher total gain of \$9.50 compared to the \$7 gain from selling a simple covered call. The covered call spread allows the Funds to participate in potential upside beyond the strike price of the purchased call, resulting in the potential for additional gains to the Funds.

Further, if the Underlying Security's share price increases further beyond the strike price of the purchased call, the covered call spread strategy allows for continued participation in the upside through the increasing value of the purchased call. This results in the potential for additional gains for the Funds. In contrast, the covered call strategy's gain potential is capped at the strike price of the sold call.

There is no guarantee that each Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Each Fund's NAV is dependent on the value of the Fund's options contracts, which are based principally upon the share price of the Underlying Security, the volatility of the Underlying Security, which influences short call prices, and the time remaining until the expiration date of the short call option contracts. Each Fund's synthetic long exposure strategy will effectively allow that portion of the Fund's assets to move in synch with the daily changes in the Underlying Security's share price.

However, each Fund's participation in the potential upside in Underlying Security returns is limited by virtue of its sold option contract positions. The degree to which a shareholder may benefit from the upside exposure to the Underlying Security obtained by a Fund will depend on the time at which the investor purchases Shares of the Fund and the price movements of the Underlying Security. At any given time, there may be limited upside potential. If the price of the Underlying Security is near or has exceeded the strike price of a Fund's sold call option contracts when an investor purchases Shares, such investor may have little to no upside potential remaining until the current short calls are replaced by a new set of short call, as well as remain vulnerable to significant downside risk, including the loss of their entire investment.

Each Fund will invest significantly in short-term (6-month to 2-year) U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy. U.S. Treasury securities are government debt instruments issued by the United States Department of the

Treasury and are backed by the full faith and credit of the United States government. The Funds' investments in U.S. Treasury securities contribute to the monthly income sought by the Funds.

Exchange Traded Options Portfolio

The Funds will purchase and sell a combination of call and put exchange traded options contracts. In general, put options give the holder (*i.e.*, the buyer) the right to sell an asset (or deliver the cash value of the asset, in case of certain put options) and the seller (*i.e.*, the writer) of the put has the obligation to buy the asset (or receive cash value of the asset, in case of certain put options) at a certain defined price. Call options give the holder (*i.e.*, the buyer) the right to buy an asset (or receive cash value of the asset, in case of certain call options) and the seller (*i.e.*, the writer) the obligation to sell the asset (or deliver cash value of the asset, in case of certain call options) at a certain defined price.

FLEX options are customized options contracts that trade on an exchange but provide investors with the ability to customize key contract terms like strike price, style and expiration date while achieving price discovery in competitive, transparent auctions markets and avoiding the counterparty exposure of "over-the-counter" ("OTC") options positions. Like traditional exchange-traded options, FLEX Options are guaranteed for settlement by the OCC, a market clearinghouse that guarantees performance by counterparties to certain derivatives contracts.

The FLEX options in which the Funds may invest are all European style options (options that are exercisable only on the expiration date). The FLEX options are listed on the Chicago Board Options Exchange.

The Funds will use the market value of its derivatives holdings for the purpose of determining compliance with the 1940 Act and the rules promulgated thereunder. Since the options held by the Funds are exchange-traded, these will be valued on a mark-to-market basis. In the event market prices are not available, the Funds will use fair value pricing pursuant to the fair value procedures adopted by the Board.

Manager of Managers Structure

Although the Funds are not currently sub-advised, the Funds and the Adviser have received exemptive relief from the SEC permitting the Adviser (subject to certain conditions and the approval of the Board) to change or select new unaffiliated sub-advisers without obtaining shareholder approval. The relief also permits the Adviser to materially amend the terms of agreements with an unaffiliated sub-adviser (including an increase in the fee paid by the Adviser to the unaffiliated sub-adviser (and not paid by the Fund)) or to continue the employment of an unaffiliated sub-adviser after an event that would otherwise cause the automatic termination of services with Board approval, but without shareholder approval. Shareholders will be notified of any unaffiliated sub-adviser changes. The Adviser has the ultimate responsibility, subject to oversight by the Board, to oversee a sub-adviser and recommend their hiring, termination and replacement. The exemptive relief applies to sub-advisers that are either wholly-owned by the Adviser or its parent company, as well as to unaffiliated sub-advisers, including those whose affiliation arises solely from their sub-advisory relationship.

Investments by Registered Investment Companies

Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies. However, registered investment companies are permitted to invest in other investment companies beyond the limits set forth in Section 12(d)(1) in rules under the 1940 Act, subject to certain conditions. The Fund may rely on Rule 12d1-4 of the 1940 Act, which provides an exemption from Section 12(d)(1) that allows the Fund to invest beyond the limits set forth in Section 12(d)(1) if the Fund satisfies certain conditions specified in Rule 12d1-4, including, among other conditions, that the Fund and its advisory group will not control (individually or in the aggregate) an acquired fund (e.g., hold more than 25% of the outstanding voting securities of an acquired fund that is a registered open-end management investment company).

Principal Risks of Investing in the Funds

There can be no assurance that the Funds will achieve their respective investment objectives. The following information is in addition to, and should be read along with, the description of each Fund's principal investment risks in the section titled "Fund Summary—Principal Investment Risks" above. Following the Fund-specific Underlying Security risks, the remaining principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Funds, regardless of the order in which it appears.

BABA Risk. The Fund invests in options contracts that are based on the value of BABA. This subjects the Fund to certain of the same risks as if it owned shares of BABA, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of BABA, the Fund may also be subject to the following risks:

Indirect Investment in BABA Risk. BABA is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of BABA but will be exposed to the performance of BABA (the underlying stock). Investors in the Fund will not have rights

to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

BABA Trading Risk. The trading price of BABA may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of BABA may be traded by short sellers which may put pressure on the supply and demand for the common stock of BABA, further influencing volatility in its market price. Public perception and other factors outside of the control of BABA may additionally impact BABA's stock price due to BABA garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against BABA in the past. While BABA continues to defend such actions, any judgment against BABA, or any future stockholder litigation could result in substantial costs and a diversion of the management of BABA's attention and resources. If BABA trading is halted, trading in Shares of the BABA Fund may be impacted, either temporarily or indefinitely.

BABA Performance Risk. BABA may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of BABA to decline. BABA provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance BABA provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If BABA's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by BABA could decline significantly.

Internet & Direct Marketing Retail Risk. Companies, such as BABA, that operate via the internet or direct marketing (e.g., online consumer services, online retail, travel) segments are subject to fluctuating consumer demand. Unlike traditional brick and mortar retailers, online marketplaces and retailers must assume shipping costs or pass such costs to consumers. Consumer access to price information for the same or similar products may cause companies that operate in the online marketplace, retail and travel segments to reduce profit margins in order to compete. Due to the nature of their business models, companies that operate in the online marketplace, retail, and travel segments may also be subject to heightened cybersecurity risk, including the risk of theft or damage to vital hardware, software, and information systems. The loss or public dissemination of sensitive customer information or other proprietary data may negatively affect the financial performance of such companies to a greater extent than traditional brick and mortar retailers. As a result of such companies being web-based and the fact that they process, store, and transmit large amounts of data, including personal information, for their customers, failure to prevent or mitigate data loss or other security breaches, including breaches of vendors' technology and systems, could expose companies that operate via the internet or direct marketing retail to a risk of loss or misuse of such information, adversely affect their operating results, result in litigation or potential liability, and otherwise harm their businesses.

Business Structural Risks. Investing in BABA, a Cayman Islands holding company, carries several significant risks due to the company's unique business structure and its base of operations primarily in China. Due to restrictions on foreign ownership and investment in China, BABA, like other foreign-incorporated entities operating in China, functions through a Variable Interest Entity structure (VIE) for its internet and other business activities. The VIEs are owned and incorporated by Chinese citizens or entities controlled by them, not BABA itself. Though contractual agreements enable BABA to effectively control the VIEs and realize the economic benefits, investors are essentially purchasing equity securities in a Cayman Islands holding company rather than equity securities issued by BABA's consolidated subsidiaries and the VIE. This structure exposes investors to potential risks and uncertainties, including regulatory changes in China.

In addition to these structural complexities, the company also confronts various operational and legal risks due to its base and primary operations in China. The Chinese government retains significant authority to regulate the business operations of China-based companies like BABA, including their overseas listings and fundraisings. Other challenges include maintaining the trusted status of BABA's ecosystems, the impact of sustained investment on margins and net income, competition, ability to innovate and adapt, risks related to acquisitions, and expansion of international and cross-border operations. Furthermore, BABA's dependence on Alipay for payment processing and escrow services, its broad exposure to evolving laws and regulations, and the potential misuse or disclosure of data also represent significant business and industry risks.

Holding Foreign Companies Accountable Act (HFCAA) Risks. The HFCAA is a U.S. law enacted in 2020, requiring the SEC to ban trading on all U.S. exchanges of any foreign company for which the Public Company Accounting Oversight Board ("PCAOB") is unable to inspect audit workpapers for three consecutive years, which is a particular threat to Chinese companies

as PCAOB inspection of the audit work of foreign accounting firms conflicts with Chinese law and policy. The enactment of the HFCAA and other efforts to increase U.S. regulatory access to audit workpapers could cause investor uncertainty, and the market price of any Chinese securities held by a Fund could be adversely affected. In addition, PCAOB's inability to evaluate the audits and quality control procedures of auditors deprive investors of the transparency and protections provided by such evaluations and may subject such investors to a heightened risk of fraud. In 2022, China regulators entered into an agreement with the PCAOB to facilitate access to the documents required for inspection of audit firms and audit documents with respect to Chinese issuers listed on U.S. exchanges. However, if the PCAOB is unable to inspect a company's auditors for three consecutive years, the issuer's securities would be de-listed from the U.S. exchange on which it trades and the resulting impact could negatively impact a Fund's performance.

CVNA Risk. The Fund invests in options contracts that are based on the value of CVNA. This subjects the Fund to certain of the same risks as if it owned shares of CVNA, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of CVNA, the Fund may also be subject to the following risks:

Indirect Investment in CVNA Risk. CVNA is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of CVNA but will be exposed to the performance of CVNA (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

CVNA Trading Risk. The trading price of CVNA may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of CVNA may be traded by short sellers which may put pressure on the supply and demand for the common stock of CVNA, further influencing volatility in its market price. Public perception and other factors outside of the control of CVNA may additionally impact CVNA's stock price due to CVNA garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against CVNA in the past. While CVNA continues to defend such actions, any judgment against CVNA, or any future stockholder litigation could result in substantial costs and a diversion of the management of CVNA's attention and resources. If CVNA trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

CVNA Performance Risk. CVNA may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of CVNA to decline. CVNA provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance CVNA provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If CVNA's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by CVNA could decline significantly.

Automotive Industry Risk. The automotive retail industry is subject to significant risks that can impact both profitability and competitiveness. The industry is highly dependent on consumer demand, which can be influenced by various factors such as economic conditions, consumer confidence, fuel prices, and preferences for particular vehicle types. Economic downturns or decreases in consumer spending can lead to reduced vehicle sales, impacting the profitability of automotive retailers. Effective inventory management is essential to avoid excess holding costs, obsolescence, and missed sales opportunities. Additionally, the industry's reliance on auto lending and financing means that changes in interest rates, lending standards, and credit availability can greatly influence consumer purchasing behavior. Regulatory compliance is another crucial aspect, as automotive retailers must adhere to various consumer protection, advertising, financing, and environmental standards, with non-compliance resulting in substantial fines, legal costs, and reputational damage.

DKNG Risk. The Fund invests in options contracts that are based on the value of DKNG. This subjects the Fund to certain of the same risks as if it owned shares of DKNG, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of DKNG, the Fund may also be subject to the following risks:

Indirect Investment in DKNG Risk. DKNG is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions

that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of DKNG but will be exposed to the performance of DKNG (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

DKNG Trading Risk. The trading price of DKNG may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of DKNG may be traded by short sellers which may put pressure on the supply and demand for the common stock of DKNG, further influencing volatility in its market price. Public perception and other factors outside of the control of DKNG may additionally impact DKNG's stock price due to DKNG garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against DKNG in the past. While DKNG continues to defend such actions, any judgment against DKNG, or any future stockholder litigation could result in substantial costs and a diversion of the management of DKNG's attention and resources. If DKNG trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

DKNG Performance Risk. DKNG may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of DKNG to decline. DKNG provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance DKNG provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If DKNG's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by DKNG could decline significantly.

Gaming Industry Risk. The global gaming industry faces intense competition from alternative entertainment options such as television, movies, and sporting events, potentially reducing the popularity of gaming offerings. Success in sports betting and iGaming depends on factors beyond DKNG's control, including sport outcomes, which can impact product performance. Additionally, partnerships with casinos, tribes, and horse-tracks are crucial for offering gaming products in specific jurisdictions, and failure to establish or manage these partnerships could hinder DKNG's gaming business. Moreover, growth prospects are contingent upon the uncertain legalization status of real-money gaming, which may face regulatory restrictions or delays, affecting gaming operations. Obtaining and maintaining gaming licenses in multiple jurisdictions is vital for business growth, and failure to do so could impair DKNG's ability to operate gaming platforms. Negative events or media coverage related to gaming, such as sports betting and iGaming, could also adversely affect user engagement and acquisition, potentially impacting gaming revenues.

General Risks. Economic downturns or reductions in discretionary consumer spending could adversely affect DKNG's gaming revenue, as gaming relies heavily on consumer spending. Risks associated with information technology systems, including failures, errors, or disruptions, pose a threat to DKNG's brand and reputation, as well as disrupting gaming operations. Despite security measures, DKNG's IT infrastructure is vulnerable to cyberattacks or breaches, potentially compromising user data and damaging reputation. Operating in a complex regulatory environment exposes DKNG to legal and regulatory risks, with changes in laws or regulations potentially impacting gaming operations and expansion plans. Investing in or acquiring other gaming businesses poses integration risks, affecting DKNG's overall performance. Being subject to taxation in multiple jurisdictions exposes DKNG to additional tax liabilities due to changes in tax laws or interpretations, affecting financial performance. The company's stock price may experience volatility, risking potential loss for investors due to fluctuations in market conditions. Additionally, as a controlled company, shareholders may lack certain corporate governance protections, potentially impacting investor confidence.

HOOD Risk. The Fund invests in options contracts that are based on the value of HOOD. This subjects the Fund to certain of the same risks as if it owned shares of HOOD, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of HOOD, the Fund may also be subject to the following risks:

Indirect Investment in HOOD Risk. HOOD is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of HOOD but will be exposed to the performance of HOOD (the underlying stock). Investors in the Fund will not

have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

HOOD Trading Risk. The trading price of HOOD may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of HOOD may be traded by short sellers which may put pressure on the supply and demand for the common stock of HOOD, further influencing volatility in its market price. Public perception and other factors outside of the control of HOOD may additionally impact HOOD's stock price due to HOOD garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against HOOD in the past. While HOOD continues to defend such actions, any judgment against HOOD, or any future stockholder litigation could result in substantial costs and a diversion of the management of HOOD's attention and resources. If HOOD trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

HOOD Performance Risk. HOOD may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of HOOD to decline. HOOD provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance HOOD provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If HOOD's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by HOOD could decline significantly.

HOOD Operational Risks. HOOD's plans to venture into new international markets introduces significant uncertainties that may not yield desired outcomes. Operations are subject to complex and evolving laws, with non-compliance posing threats to HOOD's business. Past and potential future regulatory investigations, settlements, and litigation could lead to substantial costs and reputational damage. Intense competition from rivals with greater resources threatens HOOD's market position and revenue. Failure to retain existing customers or attract new ones, coupled with reduced usage of products and services, may result in declining revenue. Moreover, failure to develop and monetize innovative offerings could diminish competitiveness and revenue streams.

Dependence on complex software and systems entails the risk of interruptions, instability, and flaws, potentially disrupting operations. Reliance on third-party entities for critical functions exposes the company to risks associated with their performance. Additionally, incorporating AI technologies presents business, compliance, and reputational risks. Cybersecurity breaches targeting the company's systems or customer data could lead to significant financial and reputational damage. Failure to maintain required net capital levels may result in restrictions and regulatory actions.

Risks associated with the effectiveness of compliance and risk management policies and procedures may impact operations under different market conditions. Operating in the highly volatile cryptocurrency market exposes the company to uncertainties and fluctuations affecting trading volumes and revenues.

Regulatory uncertainties surrounding cryptocurrency classification and compliance could lead to scrutiny, fines, and penalties. The complexity of rapidly evolving and difficult-to-interpret cryptocurrency laws and regulations poses challenges and compliance risks. Offering payment and spending services introduces risks related to illegal payments, customer asset loss, disputes, and liabilities. Future issuances of stock may lead to significant dilution, impacting shareholder value. Lastly, concentrated voting power with founders and multi-class stock structures limit shareholder influence over company decisions.

Financial Exchanges and Data Industry Risks. The industry is highly susceptible to fluctuations in economic conditions, changes in market sentiment, and regulatory alterations, which can significantly affect market volatility and trading volumes. Technological disruptions or failures, including cybersecurity breaches, could compromise user data and disrupt trading activities, potentially leading to financial losses for both the company and its users. Additionally, the competitive landscape, with rapid technological advancements and the emergence of new competitors, could impact HOOD's market share and profitability. Such factors could adversely affect HOOD's business performance and stock price and, in turn, negatively impact the Fund.

Global Crypto Asset Trading Platform Risks. HOOD has announced plans to expand its crypto asset business. Such an expansion will subject HOOD to risks related to regulatory compliance, such as the potential for increased scrutiny, enhanced

anti-money laundering (AML) and know your customer (KYC) requirements, and the need for additional licenses in various jurisdictions. Operational risks will also arise from the complexities of integrating the new platform's operations, technology, and culture, as well as the need to bolster system security and manage a more extensive technology infrastructure. Market risks, including high volatility and liquidity management challenges, will become more pronounced. Reputational risks could emerge from potential security breaches, operational failures, or regulatory violations, affecting customer trust and market perception. Legal risks may increase due to potential litigation and intellectual property issues. Additionally, HOOD will be subject to financial risks associated with the capital investment required for the expansion.

JD Risk. The Fund invests in options contracts that are based on the value of JD. This subjects the Fund to certain of the same risks as if it owned shares of JD, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of JD, the Fund may also be subject to the following risks:

Indirect Investment in JD Risk. JD is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of JD but will be exposed to the performance of JD (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

JD Trading Risk. The trading price of JD may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of JD may be traded by short sellers which may put pressure on the supply and demand for the common stock of JD, further influencing volatility in its market price. Public perception and other factors outside of the control of JD may additionally impact JD's stock price due to JD garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. If JD trading is halted, trading in Shares of the JD Fund may be impacted, either temporarily or indefinitely.

JD Performance Risk. JD may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of JD to decline. JD provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance JD provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If JD's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by JD could decline significantly.

Internet & Direct Marketing Retail Risk. Companies, such as JD, that operate via the internet or direct marketing (e.g., online consumer services, online retail, travel) segments are subject to fluctuating consumer demand. Unlike traditional brick and mortar retailers, online marketplaces and retailers must assume shipping costs or pass such costs to consumers. Consumer access to price information for the same or similar products may cause companies that operate in the online marketplace, retail and travel segments to reduce profit margins in order to compete. Due to the nature of their business models, companies that operate in the online marketplace, retail, and travel segments may also be subject to heightened cybersecurity risk, including the risk of theft or damage to vital hardware, software, and information systems. The loss or public dissemination of sensitive customer information or other proprietary data may negatively affect the financial performance of such companies to a greater extent than traditional brick and mortar retailers. As a result of such companies being web-based and the fact that they process, store, and transmit large amounts of data, including personal information, for their customers, failure to prevent or mitigate data loss or other security breaches, including breaches of vendors' technology and systems, could expose companies that operate via the internet or direct marketing retail to a risk of loss or misuse of such information, adversely affect their operating results, result in litigation or potential liability, and otherwise harm their businesses.

Business Structural Risks. Investing in JD, a Cayman Islands holding company, carries several significant risks due to the company's unique business structure and its base of operations primarily in China. Due to restrictions on foreign ownership and investment in China, JD, like other foreign-incorporated entities operating in China, functions through a Variable Interest Entity structure (VIE) for its internet and other business activities. The VIEs are owned and incorporated by Chinese citizens or entities controlled by them, not JD itself. Though contractual agreements enable JD to effectively control the VIEs and realize the economic benefits, investors are essentially purchasing equity securities in a Cayman Islands holding company

rather than equity securities issued by JD's consolidated subsidiaries and the VIE. This structure exposes investors to potential risks and uncertainties, including regulatory changes in China.

In addition to these structural complexities, the company also confronts various operational and legal risks due to its base and primary operations in China. The Chinese government retains significant authority to regulate the business operations of China-based companies like JD, including their overseas listings and fundraisings. Other challenges include maintaining the trusted status of JD's ecosystems, the impact of sustained investment on margins and net income, competition, ability to innovate and adapt, risks related to acquisitions, and expansion of international and cross-border operations.

Holding Foreign Companies Accountable Act (HFCAA) Risks. The HFCAA is a U.S. law enacted in 2020, requiring the SEC to ban trading on all U.S. exchanges of any foreign company for which the Public Company Accounting Oversight Board ("PCAOB") is unable to inspect audit workpapers for three consecutive years, which is a particular threat to Chinese companies as PCAOB inspection of the audit work of foreign accounting firms conflicts with Chinese law and policy. The enactment of the HFCAA and other efforts to increase U.S. regulatory access to audit workpapers could cause investor uncertainty, and the market price of any Chinese securities held by a Fund could be adversely affected. In addition, PCAOB's inability to evaluate the audits and quality control procedures of auditors deprive investors of the transparency and protections provided by such evaluations and may subject such investors to a heightened risk of fraud. In 2022, China regulators entered into an agreement with the PCAOB to facilitate access to the documents required for inspection of audit firms and audit documents with respect to Chinese issuers listed on U.S. exchanges. However, if the PCAOB is unable to inspect a company's auditors for three consecutive years, the issuer's securities would be de-listed from the U.S. exchange on which it trades and the resulting impact could negatively impact a Fund's performance.

MARA Risk. The Fund invests in options contracts that are based on the value of MARA. This subjects the Fund to certain of the same risks as if it owned shares of MARA, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of MARA, the Fund may also be subject to the following risks:

Indirect Investment in MARA Risk. MARA is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of MARA but will be exposed to the performance of MARA (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

MARA Trading Risk. The trading price of MARA may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of MARA may be traded by short sellers which may put pressure on the supply and demand for the common stock of MARA, further influencing volatility in its market price. Public perception and other factors outside of the control of MARA may additionally impact MARA's stock price due to MARA garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against MARA in the past. While MARA continues to defend such actions, any judgment against MARA, or any future stockholder litigation could result in substantial costs and a diversion of the management of MARA's attention and resources. If MARA trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

MARA Performance Risk. MARA may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of MARA to decline. MARA provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance MARA provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If MARA's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by MARA could decline significantly.

Bitcoin Mining Industry & Bitcoin Risks.

Companies in the Bitcoin mining industry are subject to inherent technological and operational risks. MARA's operations, which include validating transactions and securing the network, are heavily dependent on energy consumption, making

MARA's profitability susceptible to fluctuations in energy prices and potential regulatory changes affecting energy usage. The concentration of mining operations in regions with lower energy costs can also expose the company to local political and economic instability, potentially disrupting operations. Technological changes or advancements in mining algorithms can render MARA's existing equipment obsolete, leading to significant capital losses. Moreover, as the reward for mining new blocks diminishes over time, the financial incentive to continue mining may decrease, potentially reducing MARA's profitability and affecting its operational viability.

Bitcoin's price is highly volatile, and its market is influenced by the changing Bitcoin network, fluctuating acceptance levels, and unpredictable usage trends. Not being a legal tender and operating outside central authority systems like banks, Bitcoin faces potential government restrictions. For instance, some countries may limit or ban Bitcoin transactions, negatively impacting its market value.

The risks associated with Bitcoin include the possibility of fraud, theft, market manipulation, and security breaches in trading platforms. A small group of large Bitcoin holders, known as "whales," can significantly influence Bitcoin's price. The largely unregulated nature of Bitcoin and its trading venues heightens risks of fraudulent activities and market manipulation, which could affect Bitcoin's price. For example, if a group of miners gains control over a majority of the Bitcoin network, they could manipulate transactions to their advantage. Historical instances have seen Bitcoin trading venues shut down due to fraud or security breaches, often leaving investors without recourse and facing significant losses.

Updates to Bitcoin's software, proposed by developers, can lead to the creation of new digital assets, or "forks," if not broadly adopted. This can impact Bitcoin's demand and the Fund's performance. The extreme volatility of Bitcoin's market price can result in shareholder losses. Furthermore, the operation of Bitcoin exchanges may be disrupted or cease altogether due to various issues, further affecting Bitcoin's price and the Fund's investments.

The value of Bitcoin has historically been subject to significant speculation, making trading and investing in Bitcoin reliant on market sentiment rather than traditional fundamental analysis.

Bitcoin's price can be influenced by events unrelated to its security or utility, including instability in other speculative areas of the crypto/blockchain space, potentially leading to substantial declines in its value.

Risks associated with crypto asset trading platforms include fragmentation, regulatory non-compliance, and the possibility of enforcement actions by regulatory authorities, which could impact the valuation of Bitcoin-linked derivatives held by the Underlying ETPs.

The security of the Bitcoin blockchain may be compromised if a single miner or group controls more than 50% of the network's hashing power, where hashing power refers to the computational capacity used to validate and secure transactions on the blockchain.

Proposed changes to the Bitcoin protocol may not be universally adopted, leading to the creation of competing blockchains (forks) with different assets and participants, exemplified by past forks like Bitcoin Cash and Bitcoin SV.

The Bitcoin blockchain protocol may contain vulnerabilities that attackers could exploit to disrupt its operation, potentially compromising the security and reliability of the network.

Emerging alternative public blockchains, particularly those emphasizing privacy through technologies like zero-knowledge cryptography, pose risks and challenges to the dominance of the Bitcoin blockchain as a payment system.

Common impediments to adopting the Bitcoin blockchain as a payment network include slow transaction processing, variability in transaction fees, and the volatility of Bitcoin's price, which may deter widespread adoption by businesses and consumers.

The development and use of "Layer II solutions" are critical for the scalability and functionality of the Bitcoin blockchain, but they also introduce risks such as off-chain transaction execution, which could affect transparency and security. Layer II solutions are off-chain protocols that improve scalability and reduce transaction costs by processing transactions outside the main blockchain network.

Adoption and use of other blockchains supporting advanced applications like smart contracts present challenges to the dominance of the Bitcoin blockchain, potentially impacting its long-term relevance and utility in the evolving landscape of blockchain technology.

- **Digital Assets Risk:** Digital assets like Bitcoin, designed as mediums of exchange, are still an emerging asset class. They operate independently of any central authority or government backing and are subject to regulatory changes and extreme price volatility. The trading platforms for digital assets are relatively new, largely unregulated, and thus more vulnerable to fraud and failures compared to traditional, regulated exchanges. Shutdowns of these platforms due to fraud, technical glitches, or security issues can significantly affect digital asset prices and market volatility.

- **Digital Asset Markets Risk:** The digital asset market, particularly Bitcoin, has experienced considerable volatility, leading to market disruptions and erosion of confidence among market participants. This instability and the resultant negative publicity could adversely affect the Fund's reputation and trading prices. Ongoing market turbulence could significantly impact the value of the Fund's share.
- **Blockchain Technology Risk:** Blockchain technology, which underpins Bitcoin and other digital assets, is relatively new, and many of its applications are untested. The adoption of blockchain and the development of competing platforms or technologies could affect its usage. Investments in companies or vehicles that utilize blockchain technology are subject to market volatility and may experience lower trading volumes compared to more established industries. Additionally, regulatory changes, internet disruptions, cybersecurity incidents, and intellectual property disputes could further affect the adoption and functionality of blockchain technology.

PDD Risk. The Fund invests in options contracts that are based on the value of PDD. This subjects the Fund to certain of the same risks as if it owned shares of PDD, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of PDD, the Fund may also be subject to the following risks:

Indirect Investment in PDD Risk. PDD is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of PDD but will be exposed to the performance of PDD (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

PDD Trading Risk. The trading price of PDD may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of PDD may be traded by short sellers which may put pressure on the supply and demand for the common stock of PDD, further influencing volatility in its market price. Public perception and other factors outside of the control of PDD may additionally impact PDD's stock price due to PDD garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against PDD in the past. While PDD continues to defend such actions, any judgment against PDD, or any future stockholder litigation could result in substantial costs and a diversion of the management of PDD's attention and resources. If PDD trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

PDD Performance Risk. PDD may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of PDD to decline. PDD provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance PDD provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If PDD's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by PDD could decline significantly.

Internet & Direct Marketing Retail Risk. Companies, such as PDD, that operate via the internet or direct marketing (e.g., online consumer services, online retail, travel) segments are subject to fluctuating consumer demand. Unlike traditional brick and mortar retailers, online marketplaces and retailers must assume shipping costs or pass such costs to consumers. Consumer access to price information for the same or similar products may cause companies that operate in the online marketplace, retail and travel segments to reduce profit margins in order to compete. Due to the nature of their business models, companies that operate in the online marketplace, retail, and travel segments may also be subject to heightened cybersecurity risk, including the risk of theft or damage to vital hardware, software, and information systems. The loss or public dissemination of sensitive customer information or other proprietary data may negatively affect the financial performance of such companies to a greater extent than traditional brick and mortar retailers. As a result of such companies being web-based and the fact that they process, store, and transmit large amounts of data, including personal information, for their customers, failure to prevent or mitigate data loss or other security breaches, including breaches of vendors' technology and systems, could expose companies that

operate via the internet or direct marketing retail to a risk of loss or misuse of such information, adversely affect their operating results, result in litigation or potential liability, and otherwise harm their businesses.

Business Structural Risks. Investing in PDD, a Cayman Islands holding company, carries several significant risks due to the company's unique business structure and its base of operations primarily in China. Due to restrictions on foreign ownership and investment in China, PDD, like other foreign-incorporated entities operating in China, functions through a Variable Interest Entity structure (VIE) for its internet and other business activities. The VIEs are owned and incorporated by Chinese citizens or entities controlled by them, not PDD itself. Though contractual agreements enable PDD to effectively control the VIEs and realize the economic benefits, investors are essentially purchasing equity securities in a Cayman Islands holding company rather than equity securities issued by PDD's consolidated subsidiaries and the VIE. This structure exposes investors to potential risks and uncertainties, including regulatory changes in China.

In addition to these structural complexities, the company also confronts various operational and legal risks due to its base and primary operations in China. The Chinese government retains significant authority to regulate the business operations of China-based companies like PDD, including their overseas listings and fundraisings. Other challenges include maintaining the trusted status of PDD's ecosystems, the impact of sustained investment on margins and net income, competition, ability to innovate and adapt, risks related to acquisitions, and expansion of international and cross-border operations.

Holding Foreign Companies Accountable Act (HFCAA) Risks. The HFCAA is a U.S. law enacted in 2020, requiring the SEC to ban trading on all U.S. exchanges of any foreign company for which the Public Company Accounting Oversight Board ("PCAOB") is unable to inspect audit workpapers for three consecutive years, which is a particular threat to Chinese companies as PCAOB inspection of the audit work of foreign accounting firms conflicts with Chinese law and policy. The enactment of the HFCAA and other efforts to increase U.S. regulatory access to audit workpapers could cause investor uncertainty, and the market price of any Chinese securities held by a Fund could be adversely affected. In addition, PCAOB's inability to evaluate the audits and quality control procedures of auditors deprive investors of the transparency and protections provided by such evaluations and may subject such investors to a heightened risk of fraud. In 2022, China regulators entered into an agreement with the PCAOB to facilitate access to the documents required for inspection of audit firms and audit documents with respect to Chinese issuers listed on U.S. exchanges. However, if the PCAOB is unable to inspect a company's auditors for three consecutive years, the issuer's securities would be de-listed from the U.S. exchange on which it trades and the resulting impact could negatively impact a Fund's performance.

PLTR Risk. The Fund invests in options contracts that are based on the value of PLTR. This subjects the Fund to certain of the same risks as if it owned shares of PLTR, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of PLTR, the Fund may also be subject to the following risks:

Indirect Investment in PLTR Risk. PLTR is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of PLTR but will be exposed to the performance of PLTR (the Underlying Security). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

PLTR Trading Risk. The trading price of PLTR may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of PLTR may be traded by short sellers which may put pressure on the supply and demand for the common stock of PLTR, further influencing volatility in its market price. Public perception and other factors outside of the control of PLTR may additionally impact PLTR's stock price due to PLTR garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against PLTR in the past. While PLTR continues to defend such actions, any judgment against PLTR, or any future stockholder litigation could result in substantial costs and a diversion of the management of PLTR's attention and resources. If PLTR trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

PLTR Performance Risk. PLTR may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of PLTR to decline. PLTR provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance PLTR provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which

generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If PLTR's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by PLTR could decline significantly.

Software Industry Risk. The software industry can be significantly affected by intense competition, aggressive pricing, technological innovations, and product obsolescence. Companies in the software industry are subject to significant competitive pressures, such as aggressive pricing, new market entrants, competition for market share, short product cycles due to an accelerated rate of technological developments and the potential for limited earnings and/or falling profit margins. These companies also face the risks that new services, equipment or technologies will not be accepted by consumers and businesses or will become rapidly obsolete. These factors can affect the profitability of these companies and, as a result, the value of their securities. Also, patent protection is integral to the success of many companies in this industry, and profitability can be affected materially by, among other things, the cost of obtaining (or failing to obtain) patent approvals, the cost of litigating patent infringement and the loss of patent protection for products (which significantly increases pricing pressures and can materially reduce profitability with respect to such products). In addition, many software companies have limited operating histories. Prices of these companies' securities historically have been more volatile than other securities, especially over the short term.

AI Platform Risk. PLTR has launched an AI (artificial intelligence) platform, which subjects PLTR to additional risks, including challenges in developing and deploying new technologies to meet customer needs and ensuring compatibility with third-party products and services. PLTR may struggle to hire, retain, and train qualified personnel, which is crucial for meeting customer demand. The use of AI could lead to reputational harm or liability issues, and there may be difficulties in obtaining, maintaining, protecting, and enforcing intellectual property rights. Additionally, the platform could encounter real or perceived errors, failures, defects, or bugs, and reliance on third-party technology could pose risks if it becomes difficult to replace or causes errors. Finally, PLTR's AI platform will be subject to complex and evolving U.S. and non-U.S. laws and regulations regarding privacy, data protection, security, and technology protection.

RBLX Risk. The Fund invests in options contracts that are based on the value of RBLX. This subjects the Fund to certain of the same risks as if it owned shares of RBLX, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of RBLX, the Fund may also be subject to the following risks:

Indirect Investment in RBLX Risk. RBLX is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of RBLX but will be exposed to the performance of RBLX (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

RBLX Trading Risk. The trading price of RBLX may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of RBLX may be traded by short sellers which may put pressure on the supply and demand for the common stock of RBLX, further influencing volatility in its market price. Public perception and other factors outside of the control of RBLX may additionally impact RBLX's stock price due to RBLX garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against RBLX in the past. While RBLX continues to defend such actions, any judgment against RBLX, or any future stockholder litigation could result in substantial costs and a diversion of the management of RBLX's attention and resources. If RBLX trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

Operational and Execution Risks: RBLX is subject to various risks, including dependence on user engagement, as its success hinges on retaining a large and active user base whose preferences may shift. The company must also effectively manage and moderate user-generated content to prevent the dissemination of inappropriate material, which could tarnish its reputation and deter users. Ensuring robust platform security and privacy is crucial, especially given its predominantly young audience, with failures potentially leading to legal issues and a loss of trust. Regulatory changes in data privacy, consumer protection, and online safety present ongoing challenges. Additionally, Roblox operates in a competitive, rapidly evolving industry, necessitating continual technological innovation to stay ahead. The company's revenue heavily relies on in-platform purchases using its virtual currency, making it vulnerable to changes in monetization strategies or disruptions in payment systems, highlighting the importance of adapting to maintain growth and sustainability in the online gaming and content creation market.

Interactive Media and Services Industry Risks: The interactive media and services industry faces significant risks due to intense market competition, evolving regulatory environments, and reliance on advanced technology and infrastructure. Companies

must navigate a complex landscape where technological advancements and new entrants constantly introduce competitive pressures. Regulatory changes, particularly those related to data privacy, content moderation, and intellectual property, can impose substantial compliance costs and legal liabilities. Additionally, the industry depends heavily on the security and reliability of its technological infrastructure; any disruptions or breaches can lead to operational challenges and compromised user information. Attracting, engaging, and retaining users is crucial for success, and failure to manage content moderation effectively can result in legal, regulatory, and reputational risks.

Economic conditions, international operations, and the need for continuous innovation further complicate the industry's risk profile. Economic downturns and fluctuations in consumer spending can reduce demand for interactive media and services, affecting revenue and profitability. Operating globally exposes companies to political instability, currency fluctuations, and varying regulatory standards. The industry must invest in research and development to stay competitive, but these investments come with no guarantees of success. Additionally, cybersecurity threats pose a significant risk, with potential for data breaches and financial losses. Implementing robust cybersecurity measures is essential to mitigate these threats and protect valuable digital assets.

SHOP Risk. The Fund invests in options contracts that are based on the value of SHOP. This subjects the Fund to certain of the same risks as if it owned shares of SHOP, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of SHOP, the Fund may also be subject to the following risks:

Indirect Investment in SHOP Risk. SHOP is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of SHOP but will be exposed to the performance of SHOP (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

SHOP Trading Risk. The trading price of SHOP may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of SHOP may be traded by short sellers which may put pressure on the supply and demand for the common stock of SHOP, further influencing volatility in its market price. Public perception and other factors outside of the control of SHOP may additionally impact SHOP's stock price due to SHOP garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against SHOP in the past. While SHOP continues to defend such actions, any judgment against SHOP, or any future stockholder litigation could result in substantial costs and a diversion of the management of SHOP's attention and resources. If SHOP trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

SHOP Performance Risk. SHOP may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of SHOP to decline. SHOP provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance SHOP provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If SHOP's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by SHOP could decline significantly.

Internet & Direct Marketing Retail Risk. Companies, such as SHOP, that operate via the internet or direct marketing (e.g., online consumer services, online retail, travel) segments are subject to fluctuating consumer demand. Unlike traditional brick and mortar retailers, online marketplaces and retailers must assume shipping costs or pass such costs to consumers. Consumer access to price information for the same or similar products may cause companies that operate in the online marketplace, retail and travel segments to reduce profit margins in order to compete. Due to the nature of their business models, companies that operate in the online marketplace, retail, and travel segments may also be subject to heightened cybersecurity risk, including the risk of theft or damage to vital hardware, software, and information systems. The loss or public dissemination of sensitive customer information or other proprietary data may negatively affect the financial performance of such companies to a greater extent than traditional brick and mortar retailers. As a result of such companies being web-based and the fact that they process, store, and transmit large amounts of data, including personal information, for their customers, failure to prevent or mitigate data loss or other security breaches, including breaches of vendors' technology and systems, could expose companies that

operate via the internet or direct marketing retail to a risk of loss or misuse of such information, adversely affect their operating results, result in litigation or potential liability, and otherwise harm their businesses.

SMCI Risk. The Fund invests in options contracts that are based on the value of SMCI. This subjects the Fund to certain of the same risks as if it owned shares of SMCI, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of SMCI, the Fund may also be subject to the following risks:

Indirect Investment in SMCI Risk. SMCI is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of SMCI but will be exposed to the performance of SMCI (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

SMCI Trading Risk. The trading price of SMCI may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of SMCI may be traded by short sellers which may put pressure on the supply and demand for the common stock of SMCI, further influencing volatility in its market price. Public perception and other factors outside of the control of SMCI may additionally impact SMCI's stock price due to SMCI garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against SMCI in the past. While SMCI continues to defend such actions, any judgment against SMCI, or any future stockholder litigation could result in substantial costs and a diversion of the management of SMCI's attention and resources. If SMCI trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

Operational and Execution Risks: SMCI faces several operational and execution risks that could adversely impact its business operations and financial performance. Adverse economic conditions may harm the company's overall business, while recent events in eastern Europe and the Taiwan Strait pose additional challenges and uncertainties. Fluctuations in quarterly operating results, unpredictability in revenue and margins, and the concentration of larger customers and sales opportunities are factors contributing to operational volatility. Additionally, failure to meet financial guidance, challenges in securing favorable financing, and risks associated with inventory management and supply chain disruptions further compound these risks. Cybersecurity threats, difficulties in expanding and retaining the sales force, and potential conflicts of interest with affiliated companies add complexity to operational management. Moreover, reliance on key personnel, potential confusion in sales channels, and challenges in attracting and integrating key employees also contribute to operational uncertainties.

Strategic and Industry Risks: Expanding international operations, managing growth effectively, and responding to technological trends are critical strategic challenges for SMCI. The company operates in a highly competitive market, and industry consolidation could intensify competition. Dependence on suppliers, indirect sales channels, and the need for continuous product innovation further highlight industry-specific risks. Quality control issues, fluctuations in corporate ventures, and challenges in managing international business operations also pose strategic concerns for SMCI.

Additional & Technology-Related Risks. SMCI faces additional risks specific to its operations, including significant reliance on a limited number of key suppliers, which could disrupt production if supply chain issues arise. SMCI is also vulnerable to rapid technological changes in the industry, necessitating continuous innovation and investment in research and development. SMCI's global operations expose it to geopolitical risks, currency fluctuations, and compliance with diverse regulatory environments. Moreover, SMCI's dependence on key personnel means that the loss of any critical team members could adversely affect its business.

Delisting Risk. SMCI announced in 2024 that it received a notification letter from Nasdaq stating that SMCI is not in compliance with Nasdaq listing rule 5250(c)(1), which requires timely filing of reports with the U.S. Securities and Exchange Commission. The letter, dated September 17, 2024, was sent as a result of SMCI's delay in filing its Annual Report on Form 10-K for the period ending June 30, 2024 (the "Form 10-K"). SMCI subsequently filed its Form 10-K and its Quarterly Reports on Form 10-Q for the first two quarters of its 2025 fiscal year on February 25, 2025 and is therefore back in compliance; however, should SMCI fail to comply with the rule within required timelines going forward it's possible SMCI stock could be delisted which would prevent the Fund from continuing to operate.

TSM Risk. The Fund invests in options contracts that are based on the value of TSM. This subjects the Fund to certain of the same risks as if it owned shares of TSM, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of TSM, the Fund may also be subject to the following risks:

Indirect Investment in TSM Risk. TSM is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence management of TSM but will be exposed to the performance of TSM (the underlying stock). Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stock but will be subject to declines in the performance of the underlying stock.

TSM Trading Risk. The trading price of TSM may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. In particular, a large proportion of TSM may be traded by short sellers which may put pressure on the supply and demand for the common stock of TSM, further influencing volatility in its market price. Public perception and other factors outside of the control of TSM may additionally impact TSM's stock price due to TSM garnering a disproportionate degree of public attention, regardless of actual operating performance. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against companies such as these. Moreover, stockholder litigation like this has been filed against TSM in the past. While TSM continues to defend such actions, any judgment against TSM, or any future stockholder litigation could result in substantial costs and a diversion of the management of TSM's attention and resources. If TSM trading is halted, trading in Shares of the Fund may be impacted, either temporarily or indefinitely.

TSM Performance Risk. TSM may fail to meet its publicly announced guidelines or other expectations about its business, which could cause the price of TSM to decline. TSM provides guidance regarding its expected financial and business performance, such as projections regarding sales and production, as well as anticipated future revenues, gross margins, profitability and cash flows. Correctly identifying key factors affecting business conditions and predicting future events is inherently an uncertain process, and the guidance TSM provides may not ultimately be accurate and has in the past been inaccurate in certain respects, such as the timing of new product manufacturing ramps. The guidance is based on certain assumptions such as those relating to global and local economic conditions, anticipated production and sales volumes (which generally are not linear throughout a given period), average sales prices, supplier and commodity costs, and planned cost reductions. If TSM's guidance is not accurate or varies from actual results due to its inability to meet the assumptions or the impact on its financial performance that could occur as a result of various risks and uncertainties, the market value of common stock issued by TSM could decline significantly.

Semiconductor Company Risk. Competitive pressures may have a significant effect on the financial condition of semiconductor companies and, as product cycles shorten and manufacturing capacity increases, these companies may become increasingly subject to aggressive pricing, which hampers profitability. Reduced demand for end-user products, under-utilization of manufacturing capacity, and other factors could adversely impact the operating results of companies in the semiconductor sector. Semiconductor companies typically face high capital costs and may be heavily dependent on intellectual property rights. The semiconductor sector is highly cyclical, which may cause the operating results of many semiconductor companies to vary significantly. The stock prices of companies in the semiconductor sector have been and likely will continue to be extremely volatile.

Geopolitical Risks. TSM is subject to substantial geopolitical risks due to the complex and often tense relationship between Taiwan and China. The potential for military conflict or increased political pressure from China poses a substantial threat to TSM's operations and supply chain stability. Additionally, any escalation in cross-strait tensions could lead to economic sanctions, trade restrictions, or other regulatory measures that might disrupt TSM's business activities and international partnerships. TSM's reliance on global markets also means that geopolitical instability could affect investor confidence and result in fluctuations in its share price and market value. Furthermore, TSM's operational concentration in Taiwan makes it particularly vulnerable to regional political and military developments, which could severely impact its production capabilities and overall business continuity.

Call Strategy Risks. The path dependency (i.e., the continued use) of each Fund's call writing strategy will impact the extent that the Fund participates in the positive price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold call options and over longer time periods. If, for example, each month a Fund were to sell 7% out-of-the-money call options having a one-month term, the Fund's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both a Fund's participation in the positive price returns of an Underlying Security and its returns will depend not only on the price the Underlying Security but also on the path that such security takes over time.

Additionally, when implementing the Covered Call Spread Strategy, the use of credit call spreads introduces further complexities and risks. While purchasing a higher-strike call option limits potential losses from the short call position, it also reduces the net premium

received, which may result in lower overall returns compared to a stand-alone covered call strategy. If the price of the Underlying Security rises rapidly, the call spread may still cap upside participation, leading to missed profit opportunities. Furthermore, market conditions, such as mispricing between near-the-money and further out-of-the-money options, may impact the effectiveness of the strategy, potentially resulting in lower-than-expected returns or increased losses. The relative pricing of options at different strike levels can vary due to volatility shifts, liquidity constraints, or other market dynamics, adding an additional layer of uncertainty to the Fund's performance under this strategy.

Counterparty Risk. Each Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, a Fund's counterparty is a clearing house rather than a bank or broker. Since the Funds are not members of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Funds will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, a Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by a Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of a Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of a Fund might not be fully protected in the event of the clearing member's bankruptcy, as a Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. Each Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Funds as they seek to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Funds' behalf. If a clearing member defaults a Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If a Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Derivatives Risk. The Funds' derivative investments have risks, including the imperfect correlation between the value of such instruments and the underlying assets; the loss of principal, including the potential loss of amounts greater than the initial amount invested in the derivative instrument; the possible default of the other party to the transaction; and illiquidity of the derivative investments. Use of derivatives could also result in a loss if the counterparty to the transaction does not perform as promised, including because of such counterparty's bankruptcy or insolvency. This risk may be greater during volatile market conditions. Other risks include the inability to close out a position because the trading market becomes illiquid (particularly in the OTC markets) or the availability of counterparties becomes limited for a period of time. In addition, the presence of speculators in a particular market could lead to price distortions.

Certain of the Funds' transactions in derivatives could also affect the amount, timing, and character of distributions to shareholders, which may result in a Fund realizing more short-term capital gain and ordinary income subject to tax at ordinary income tax rates than it would if it did not engage in such transactions, which may adversely impact such Fund's after-tax returns.

In addition, each Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For each of the Funds, the value of the options contracts in which the Fund invests are substantially influenced by the value of the applicable Underlying Security. The Funds may experience substantial downside from specific option positions and certain option positions held by a Fund may expire worthless. The options held by the Funds are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly moves with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the reference asset, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Funds will be determined based on market quotations or other recognized pricing methods. Additionally, as each Fund intends to continuously maintain indirect exposure to the applicable Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, a Fund may experience losses.

Distribution Risk. As part of the Funds' investment objectives, the Funds seek to provide current monthly income. There is no assurance that the Funds will make a distribution in any given month. If a Fund makes distributions, the amounts of such distributions will likely

vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

ETF Risk.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Funds have a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. Each Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, a Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, a Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause a Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, a Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on a Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of a Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as the Exchange, and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of a Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above a Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of a Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that are based on the value of an ETF, such as the Underlying Security's securities being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, a Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

Foreign Investment Risk. Because each of YieldMax™ BABA Option Income Strategy ETF, YieldMax™ JD Option Income Strategy ETF, YieldMax™ PDD Option Income Strategy ETF, YieldMax™ SHOP Option Income Strategy ETF, and YieldMax™ TSM Option Income Strategy ETF has indirect exposure to the stock or ADR of a foreign company, each such Fund may be subject to risks associated with foreign investments.

- *Currency Risk:* Indirect exposure to foreign currencies subjects the Fund to the risk that currencies will decline in value relative to the U.S. dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates and the imposition of currency controls or other political developments in the U.S. or abroad.
- *Depositary Receipts Risk:* Investment in ADRs may be less liquid than the underlying shares in their primary trading market.

- *Foreign Market and Trading Risk:* The trading markets for many foreign securities are not as active as U.S. markets and may have less governmental regulation and oversight.
- *Foreign Securities Risk:* Investments in securities of non-U.S. issuers involve certain risks that may not be present with investments in securities of U.S. issuers, such as risk of loss due to foreign currency fluctuations or to political or economic instability, as well as varying regulatory requirements applicable to investments in non-U.S. issuers. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Non-U.S. issuers may also be subject to different regulatory, accounting, auditing, financial reporting and investor protection standards than U.S. issuers.

High Portfolio Turnover Risk. The Funds may actively and frequently trade all or a significant portion of the securities in its portfolio. A high portfolio turnover rate increases transaction costs, which may increase a Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Funds due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Funds, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater to the Funds as they will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If a Fund is forced to sell an illiquid security at an unfavorable time or price, such Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent a Fund from limiting losses, realizing gains or achieving a high correlation with the applicable Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Funds.

Money Market Instrument Risk. The Funds may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

NAV Erosion Risk Due to Distributions. If a Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions, if any, by a Fund may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

New(er) Fund Risk. Each Fund is recently organized with no or limited operating history. As a result, prospective investors do not have or have a limited track record or history on which to base their investment decisions. There can be no assurance that the Funds will grow to or maintain an economically viable size.

Non-Diversification Risk. Because each Fund is "non-diversified," a Fund may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause a Fund's overall value to decline to a greater degree than if such Fund held a more diversified portfolio. This may increase the Fund's volatility and have a greater impact on such Fund's performance. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Operational Risk. Each Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Funds' service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. Each Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect a Fund's ability to meet its investment objective. Although the Funds and the Funds' investment advisor seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Price Participation Risk. Each Fund employs an investment strategy that includes the sale of call option contracts, which limits the degree to which such Fund will participate in increases in value experienced by the applicable Underlying Security over the Call Period. This means that if the Underlying Security experiences an increase in value above the strike price of the sold call options during a Call Period, the applicable Fund will likely not experience that increase to the same extent and may significantly underperform such Underlying Security over the Call Period. Additionally, because each Fund is limited in the degree to which it will participate in increases in value experienced by the Underlying Security over each Call Period but has full exposure to any decreases in value experienced by the Underlying Security over the Call Period, the NAV of the Fund may decrease over any given time period. Each Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Security. The degree of participation in Underlying Security gains a Fund will experience will depend on prevailing market conditions, especially

market volatility, at the time such Fund enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore a Fund's NAV, will change. However, it is not expected for a Fund's NAV to directly correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the option contract's expiration date affects the impact of the potential options contract income on a Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to a Fund's NAV, the Funds generally anticipate that the rate of change in a Fund's NAV will be different than that experienced by the Underlying Security.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Significant market volatility and market downturns may limit the Funds' ability to sell securities and obtain long exposure to securities, and a Funds' sales and long exposures may exacerbate the market volatility and downturn. Under such circumstances, a Fund may have difficulty achieving its investment objective for one or more trading days, which may adversely impact a Fund's returns on those days and periods inclusive of those days. Alternatively, a Fund may incur higher costs in order to achieve its investment objective and may be forced to purchase and sell securities (including other ETFs' shares) at market prices that do not represent their fair value (including in the case of an ETF, its NAV) or at times that result in differences between the price such Fund receives for the security and the market closing price of the security. Under those circumstances, a Fund's ability to track the applicable Underlying Security is likely to be adversely affected, the market price of Shares may reflect a greater premium or discount to NAV and bid-ask spreads in Shares may widen, resulting in increased transaction costs for secondary market purchasers and sellers.

Single Issuer Risk. Issuer-specific attributes may cause an in a Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of a Fund, which focuses on an Underlying Security, may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Funds may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

PORTFOLIO HOLDINGS

Information about each Fund's daily portfolio holdings is, or will be, available on the Funds' website at www.yieldmaxetfs.com.

A complete description of each Fund’s policies and procedures with respect to the disclosure of a Fund’s portfolio holdings is available in the Funds’ SAI.

MANAGEMENT

Investment Adviser

Tidal Investments LLC (the “Adviser”), located at 234 West Florida Street, Suite 203, Milwaukee, Wisconsin 53204, is an SEC registered investment adviser and a Delaware limited liability company. Tidal was founded in March 2012 and is dedicated to understanding, researching and managing assets within the expanding ETF universe. As of January 31, 2025, Tidal had assets under management of approximately \$29.72 billion and served as the investment adviser or sub-adviser for 194 registered funds.

Tidal serves as investment adviser to the Funds and has overall responsibility for the general management and administration of the Funds pursuant to an investment advisory agreement with the Trust, on behalf of each Fund (the “Advisory Agreement”). The Adviser is responsible for trading portfolio securities for each Fund, including selecting broker-dealers to execute purchase and sale transactions. The Adviser also arranges for sub-advisory, transfer agency, custody, fund administration, and all other related services necessary for the Fund to operate. For the services provided to the Funds, each Fund pays the Adviser a unitary management fee of 0.99%, which is calculated daily and paid monthly, at an annual rate based on such Fund’s average daily net assets.

Under the Advisory Agreement, in exchange for a single unitary management fee from the Fund, the Adviser has agreed to pay all expenses incurred by such Fund except for its advisory fee, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, extraordinary expenses, distribution fees and expenses paid by a Fund under any distribution plan adopted pursuant to Rule 12b-1 under the 1940 Act, and the unitary management fee payable to the Adviser (collectively, the “Excluded Expenses”).

Advisory Agreement

A discussion regarding the basis for the Board’s most recent approval of a Fund Advisory Agreement is available in the October 31, 2024 Certified Shareholder Report on Form N-CSR.

Portfolio Managers

The following individuals (each, a “Portfolio Manager”) have served as portfolio managers of each Fund since inception in 2024 or 2025, as applicable. Mr. Pestrichelli is primarily responsible for the day-to-day management of each Fund, and Ms. Duan and Mr. Mullen oversee trading and execution for each Fund.

Jay Pestrichelli, Portfolio Manager for the Adviser

Mr. Pestrichelli joined the Adviser in 2025 and is Chief Trading Officer of the Adviser’s ETF Trading and Portfolio Management team. Mr. Pestrichelli has over 30 years of experience in the financial markets. Prior to joining the Adviser, Mr. Pestrichelli co-founded ZEGA Financial, LLC (“ZEGA”) where he led the development and execution of ZEGA’s investment strategies since its inception in 2011. He is also the author of the best-selling book “Buy & Hedge: The Five Iron Rules for Investing Over the Long Term.” Prior to founding ZEGA, Mr. Pestrichelli spent 12 years managing and growing the online trading business for TD Ameritrade from 1999 to 2010. Mr. Pestrichelli has a Bachelor degree in Behavioral Science from Concordia College.

Qiao Duan, CFA, Portfolio Manager for the Adviser

Qiao Duan serves as Portfolio Manager at the Adviser, having joined the firm in October 2020. From February 2017 to October 2020, she was an execution Portfolio Manager at Exponential ETFs, where she managed research and analysis relating to all Exponential ETF strategies. Ms. Duan previously served as a portfolio manager for the Exponential ETFs from their inception in May 2019 until October 2020. Ms. Duan received a Master of Science in Quantitative Finance and Risk Management from the University of Michigan in 2016 and a Bachelor of Science in Mathematics and Applied Mathematics from Xiamen University in 2014. She holds the CFA designation.

Christopher P. Mullen, Portfolio Manager for the Adviser

Christopher P. Mullen serves as Portfolio Manager at the Adviser, having joined the firm in January 2024. From September 2019 to December 2023, he was a Portfolio Manager at Vest Financial LLC, where he managed exchange-traded funds, mutual funds and retirement fund portfolios. Mr. Mullen previously served as a Senior Portfolio Analyst at ProShares Advisors LLC from September 2016 until September 2019. Prior to that, Mr. Mullen served as associate portfolio manager at USCF Investments LLC from February 2013 to September 2016. Mr. Mullen received a Master of Business Administration from the University of Maryland. He also holds a dual bachelor’s degree in global politics and history from Marquette University.

CFA® is a registered trademark owned by the CFA Institute.

The Funds' SAI provides additional information about each portfolio manager's compensation structure, other accounts that each portfolio manager manages, and each portfolio manager's ownership of Shares.

Fund Supporters

The Adviser, Tidal ETF Services LLC, ZEGA, Lucania Investments LLC ("Lucania"), and Level ETF Ventures LLC ("Level," and together with the Adviser, ZEGA and Lucania, the "Supporters" and each a "Supporter") have entered into a fund support agreement pursuant to which each Supporter has agreed to provide financial support (as described below) to the Funds. Every month, the unitary management fees for each Fund are calculated and paid to the Adviser, and the Adviser retains a portion of the unitary management fees from each Fund. In return for its financial support for the Funds, the Adviser has agreed to pay each Supporter a portion of any remaining profits generated by the unitary management fees for the Funds. If the aggregate amount of the unitary management fees for the Funds exceeds the aggregate of the Funds' operating expenses and the Adviser-retained amounts, that excess amount is considered "remaining profit." In that case, the Adviser will pay a portion of the remaining profits to the Supporters. Further, if the aggregate amount of the unitary management fees for the Funds is less than the aggregate of Funds' operating expenses and the Adviser-retained amounts, each Supporter is obligated to reimburse the Adviser for a portion of the shortfall.

HOW TO BUY AND SELL SHARES

Each Fund issues and redeems Shares only in Creation Units at the NAV per share next determined after receipt of an order from an AP. Only APs may acquire Shares directly from a Fund, and only APs may tender their Shares for redemption directly to the Funds, at NAV. APs must be a member or participant of a clearing agency registered with the SEC and must execute a Participant Agreement that has been agreed to by the Distributor (defined below), and that has been accepted by a Fund's transfer agent, with respect to purchases and redemptions of Creation Units. Once created, Shares trade in the secondary market in quantities less than a Creation Unit.

In order to purchase Creation Units of a Fund, an AP must generally deposit a designated portfolio of equity securities (the "Deposit Securities") and/or a designated amount of U.S. cash. Purchases and redemptions of Creation Units primarily with cash, rather than through in-kind delivery of portfolio securities, may cause the Funds to incur certain costs. These costs could include brokerage costs or taxable gains or losses that it might not have incurred if it had made redemption in-kind. These costs could be imposed on a Fund, and thus decrease the Fund's NAV, to the extent that the costs are not offset by a transaction fee payable by an AP.

Most investors buy and sell Shares in secondary market transactions through brokers. Individual Shares are listed for trading on the secondary market on the Exchange and can be bought and sold throughout the trading day like other publicly traded securities.

When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offer price in the secondary market on each leg of a round trip (purchase and sale) transaction. In addition, because secondary market transactions occur at market prices, you may pay more than NAV when you buy Shares, and receive less than NAV when you sell those Shares.

Book Entry

Shares are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company ("DTC") or its nominee is the record owner of all outstanding Shares.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. DTC's participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book-entry or "street name" through your brokerage account.

Frequent Purchases and Redemptions of Shares

None of the Funds imposes any restrictions on the frequency of purchases and redemptions of Shares. In determining not to approve a written, established policy, the Board evaluated the risks of market timing activities by a Fund's shareholders. Purchases and redemptions by APs, who are the only parties that may purchase or redeem Shares directly with a Fund, are an essential part of the ETF process and help keep Share trading prices in line with the NAV. As such, the Funds accommodate frequent purchases and redemptions by APs. However, the Board has also determined that frequent purchases and redemptions for cash may increase tracking error and portfolio transaction costs and may lead to the realization of capital gains. To minimize these potential consequences of frequent purchases and redemptions, each Fund employs fair value pricing and may impose transaction fees on purchases and redemptions of Creation Units to cover the custodial and other costs incurred by such Fund in effecting trades. In addition, the Funds and the Adviser reserve the right to reject any purchase order at any time.

Determination of Net Asset Value

Each Fund's NAV is calculated as of the scheduled close of regular trading on the New York Stock Exchange ("NYSE"), generally 4:00 p.m. Eastern Time, each day the NYSE is open for regular business. The NAV for the Funds is calculated by dividing such Fund's net assets by its Shares outstanding.

In calculating its NAV, each Fund generally value its assets on the basis of market quotations, last sale prices, or estimates of value furnished by a pricing service or brokers who make markets in such instruments. If such information is not available for a security held by a Fund or is determined to be unreliable, the security will be valued at fair value estimates under guidelines established by the Adviser (as described below).

Fair Value Pricing

The Board has designated the Adviser as the "valuation designee" for the Fund under Rule 2a-5 of the 1940 Act, subject to its oversight. The Adviser has adopted procedures and methodologies, which have been approved by the Board, to fair value Fund investments whose market prices are not "readily available" or are deemed to be unreliable. For example, such circumstances may arise when: (i) an investment has been delisted or has had its trading halted or suspended; (ii) an investment's primary pricing source is unable or unwilling to provide a price; (iii) an investment's primary trading market is closed during regular market hours; or (iv) an investment's value is materially affected by events occurring after the close of the investment's primary trading market. Generally, when fair valuing an investment, the Adviser will take into account all reasonably available information that may be relevant to a particular valuation including, but not limited to, fundamental analytical data regarding the issuer, information relating to the issuer's business, recent trades or offers of the investment, general and/or specific market conditions, and the specific facts giving rise to the need to fair value the investment. Fair value determinations are made in good faith and in accordance with the fair value methodologies included in the Adviser-adopted valuation procedures. The Adviser will fair value Fund investments whose market prices are not "readily available" or are deemed to be unreliable. Due to the subjective and variable nature of fair value pricing, there can be no assurance that the Adviser will be able to obtain the fair value assigned to the investment upon the sale of such investment.

Delivery of Shareholder Documents – Householding

Householding is an option available to certain investors of the Funds. Householding is a method of delivery, based on the preference of the individual investor, in which a single copy of certain shareholder documents can be delivered to investors who share the same address, even if their accounts are registered under different names. Householding for the Funds is available through certain broker-dealers. If you are interested in enrolling in householding and receiving a single copy of prospectuses and other shareholder documents, please contact your broker-dealer. If you are currently enrolled in householding and wish to change your householding status, please contact your broker-dealer.

DIVIDENDS, DISTRIBUTIONS, AND TAXES

Dividends and Distributions

The Funds intend to pay out dividends and interest income, if any, monthly, and distribute any net realized capital gains to its shareholders at least annually.

The Funds will declare and pay income and capital gain distributions, if any, in cash. Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available. Your broker is responsible for distributing the income and capital gain distributions to you.

Taxes

The following discussion is a summary of some important U.S. federal income tax considerations generally applicable to investments in the Funds. Your investment in a Fund may have other tax implications. Please consult your tax advisor about the tax consequences of an investment in Shares, including the possible application of foreign, state, and local tax laws.

Each Fund intends to qualify each year for treatment as a regulated investment company (a "RIC") under the Internal Revenue Code of 1986, as amended. If it meets certain minimum distribution requirements, a RIC is not subject to tax at the fund level on income and gains from investments that are timely distributed to shareholders. However, a Fund's failure to qualify as a RIC or to meet minimum distribution requirements would result (if certain relief provisions were not available) in fund-level taxation and, consequently, a reduction in income available for distribution to shareholders.

Unless your investment in Shares is made through a tax-exempt entity or tax-advantaged account, such as an IRA plan, you need to be aware of the possible tax consequences when a Fund makes distributions, when you sell your Shares listed on the Exchange, and when you purchase or redeem Creation Units (institutional investors only).

The following general discussion of certain U.S. federal income tax consequences is based on provisions of the Code and the regulations issued thereunder as in effect on the date of this SAI. New legislation, as well as administrative changes or court decisions, may significantly change the conclusions expressed herein, and may have a retroactive effect with respect to the transactions contemplated herein.

Taxes on Distributions. Each Fund intends to pay out dividends and interest income, if any, monthly, and distribute any net realized capital gains to its shareholders at least annually. For federal income tax purposes, distributions of net investment income are generally taxable as ordinary income. Taxes on distributions of net capital gains (if any) are determined by how long the Fund owned the investments that generated them, rather than how long a shareholder has owned their Shares. Sales of assets held by a Fund for more than one year generally result in long-term capital gains and losses, and sales of assets held by such Fund for one year or less generally result in short-term capital gains and losses. Distributions of a Fund's net capital gain (the excess of net long-term capital gains over net short-term capital losses) that are reported by such Fund as capital gain dividends ("Capital Gain Dividends") will be taxable as long-term capital gains. Distributions of short-term capital gain will generally be taxable as ordinary income. Dividends and distributions are generally taxable to you whether you receive them in cash or reinvest them in additional Shares.

Distributions reported by a Fund as "qualified dividend income" are generally taxed to non-corporate shareholders at rates applicable to long-term capital gains, provided certain holding period and other requirements are met. "Qualified dividend income" generally is income derived from dividends paid by U.S. corporations or certain foreign corporations that are either incorporated in a U.S. possession or eligible for tax benefits under certain U.S. income tax treaties. In addition, dividends that a Fund receives in respect of stock of certain foreign corporations may be qualified dividend income if that stock is readily tradable on an established U.S. securities market. Corporate shareholders may be entitled to a dividends-received deduction for the portion of dividends they receive from a Fund that are attributable to dividends received by such Fund from U.S. corporations, subject to certain limitations. Given the investment strategies of the Funds, it is unlikely that any dividends paid by a Fund will be qualified dividends or be eligible for the corporate dividends paid deduction.

Shortly after the close of each calendar year, you will be informed of the character of any distributions received from a Fund.

In addition to the federal income tax, certain individuals, trusts, and estates may be subject to a Net Investment Income ("NII") tax of 3.8%. The NII tax is imposed on the lesser of: (i) a taxpayer's investment income, net of deductions properly allocable to such income; or (ii) the amount by which such taxpayer's modified adjusted gross income exceeds certain thresholds (\$250,000 for married individuals filing jointly, \$200,000 for unmarried individuals and \$125,000 for married individuals filing separately). Each Fund's distributions are includable in a shareholder's investment income for purposes of this NII tax. In addition, any capital gain realized by a shareholder upon a sale or redemption of shares of a Fund is includable in such shareholder's investment income for purposes of this NII tax.

In general, your distributions are subject to federal income tax for the year in which they are paid. Certain distributions paid in January, however, may be treated as paid on December 31 of the prior year. Distributions are generally taxable even if they are paid from income or gains earned by a Fund before your investment (and thus were included in the Shares' NAV when you purchased your Shares).

You may wish to avoid investing in a Fund shortly before a dividend or other distribution, because such a distribution will generally be taxable even though it may economically represent a return of a portion of your investment.

If you are neither a resident nor a citizen of the United States or if you are a foreign entity, distributions (other than Capital Gain Dividends) paid to you by a Fund will generally be subject to a U.S. withholding tax at the rate of 30%, unless a lower treaty rate applies. The Funds may, under certain circumstances, report all or a portion of a dividend as an "interest-related dividend" or a "short-term capital gain dividend," which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met.

Under the Foreign Account Tax Compliance Act ("FATCA"), the Funds may be required to withhold a generally nonrefundable 30% tax on distributions of net taxable income paid to (A) certain "foreign financial institutions" unless such foreign financial institution agrees to verify, monitor, and report to the Internal Revenue Service ("IRS") the identity of certain of its account-holders, among other items (or unless such entity is otherwise deemed compliant under the terms of an intergovernmental agreement between the United States and the foreign financial institution's country of residence), and (B) certain "non-financial foreign entities" unless such entity certifies to the Fund that it does not have any substantial U.S. owners or provides the name, address, and taxpayer identification number of each substantial U.S. owner, among other items. This FATCA withholding tax could also affect a Fund's return on its investments in foreign securities or affect a shareholder's return if the shareholder holds its Fund shares through a foreign intermediary. You are urged to consult your tax adviser regarding the application of this FATCA withholding tax to your investment in a Fund and the potential certification, compliance, due diligence, reporting, and withholding obligations to which you may become subject in order to avoid this withholding tax.

Each Fund (or a financial intermediary, such as a broker, through which a shareholder owns Shares) generally is required to withhold and remit to the U.S. Treasury a percentage of the taxable distributions and sale or redemption proceeds paid to any shareholder who fails to properly furnish a correct taxpayer identification number, who has underreported dividend or interest income, or who fails to certify that they are not subject to such withholding.

Taxes When Shares are Sold on the Exchange

Any capital gain or loss realized upon a sale of Shares generally is treated as a long-term capital gain or loss if Shares have been held for more than one year and as a short-term capital gain or loss if Shares have been held for one year or less. However, any capital loss on a sale of Shares held for six months or less is treated as long-term capital loss to the extent of Capital Gain Dividends paid with respect to such Shares. Any loss realized on a sale will be disallowed to the extent Shares of a Fund are acquired, including through reinvestment of dividends, within a 61-day period beginning 30 days before and ending 30 days after the sale of substantially identical Shares.

Taxes on Purchases and Redemptions of Creation Units

An AP having the U.S. dollar as its functional currency for U.S. federal income tax purposes who exchanges securities for Creation Units generally recognizes a gain or a loss. The gain or loss will be equal to the difference between the value of the Creation Units at the time of the exchange and the exchanging AP's aggregate basis in the securities delivered plus the amount of any cash paid for the Creation Units. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanging AP's basis in the Creation Units and the aggregate U.S. dollar market value of the securities received, plus any cash received for such Creation Units. The IRS may assert, however, that a loss that is realized upon an exchange of securities for Creation Units may not be currently deducted under the rules governing "wash sales" (for an AP who does not mark-to-market their holdings) or on the basis that there has been no significant change in economic position. Persons exchanging securities should consult their own tax advisor with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if Shares comprising the Creation Units have been held for more than one year and as a short-term capital gain or loss if such Shares have been held for one year or less.

The Funds may include a payment of cash in addition to, or in place of, the delivery of a basket of securities upon the redemption of Creation Units. The Funds may sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Funds to recognize investment income and/or capital gains or losses that they might not have recognized if they had completely satisfied the redemption in-kind. As a result, the Funds may be less tax efficient if they include such a cash payment in the proceeds paid upon the redemption of Creation Units.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Funds. It is not a substitute for personal tax advice. You also may be subject to foreign, state and local tax on Fund distributions and sales of Shares. Consult your personal tax advisor about the potential tax consequences of an investment in Shares under all applicable tax laws. For more information, please see the section entitled "Federal Income Taxes" in the SAI.

DISTRIBUTION

Foreside Fund Services, LLC, a wholly owned subsidiary of Foreside Financial Group (dba ACA Group) (the "Distributor"), the Funds' distributor, is a broker-dealer registered with the SEC. The Distributor distributes Creation Units for the Fund on an agency basis and does not maintain a secondary market in Shares. The Distributor has no role in determining the policies of the Funds or the securities that are purchased or sold by the Funds. The Distributor's principal address is Three Canal Plaza, Suite 100, Portland, Maine 04101.

The Board has adopted a Distribution (Rule 12b-1) Plan (the "Plan") pursuant to Rule 12b-1 under the 1940 Act. In accordance with the Plan, the Funds are authorized to pay an amount up to 0.25% of its average daily net assets each year to pay distribution fees for the sale and distribution of its Shares.

No Rule 12b-1 fees are currently paid by the Funds, and there are no plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, because the fees are paid out of assets of the respective Fund on an ongoing basis, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

PREMIUM/DISCOUNT INFORMATION

Information regarding how often Shares of the Funds traded on the Exchange at a price above (i.e., at a premium) or below (i.e., at a discount) the NAV of such Fund can be found on the Funds' website at www.yieldmaxetfs.com.

ADDITIONAL NOTICES

Shares are not sponsored, endorsed, or promoted by the Exchange. The Exchange is not responsible for, nor has it participated in the determination of, the timing, prices, or quantities of Shares to be issued, nor in the determination or calculation of the equation by which Shares are redeemable. The Exchange has no obligation or liability to owners of Shares in connection with the administration, marketing, or trading of Shares.

Without limiting any of the foregoing, in no event shall the Exchange have any liability for any lost profits or indirect, punitive, special, or consequential damages even if notified of the possibility thereof.

The Adviser, ZEGA, Lucania, Level, and the Funds make no representation or warranty, express or implied, to the owners of Shares or any member of the public regarding the advisability of investing in securities generally or in any Fund particularly.

The Third Amended and Restated Declaration of Trust (“Declaration of Trust”) provides a detailed process for the bringing of derivative or direct actions by shareholders in order to permit legitimate inquiries and claims while avoiding the time, expense, distraction, and other harm that can be caused to a Fund or its shareholders as a result of spurious shareholder demands and derivative actions. Prior to bringing a derivative action, a demand by three unrelated shareholders must first be made on a Fund’s Trustees. The Declaration of Trust details various information, certifications, undertakings and acknowledgments that must be included in the demand. Following receipt of the demand, the trustees have a period of 90 days, which may be extended by an additional 60 days, to consider the demand. If a majority of the Trustees who are considered independent for the purposes of considering the demand determine that maintaining the suit would not be in the best interests of the Fund, the Trustees are required to reject the demand and the complaining shareholders may not proceed with the derivative action unless the shareholders are able to sustain the burden of proof to a court that the decision of the Trustees not to pursue the requested action was not a good faith exercise of their business judgment on behalf of the Fund. The Declaration of Trust further provides that shareholders owning Shares representing no less than a majority of a Fund’s outstanding shares must join in bringing the derivative action. If a demand is rejected, the complaining shareholders will be responsible for the costs and expenses (including attorneys’ fees) incurred by the Fund in connection with the consideration of the demand, if a court determines that the demand was made without reasonable cause or for an improper purpose. If a derivative action is brought in violation of the Declaration of Trust, the shareholders bringing the action may be responsible for the Fund’s costs, including attorneys’ fees, if a court determines that the action was brought without reasonable cause or for an improper purpose. The Declaration of Trust provides that no shareholder may bring a direct action claiming injury as a shareholder of the Trust, or any Fund, where the matters alleged (if true) would give rise to a claim by the Trust or by the Trust on behalf of a Fund, unless the shareholder has suffered an injury distinct from that suffered by the shareholders of the Trust, or the Fund, generally. Under the Declaration of Trust, a shareholder bringing a direct claim must be a shareholder of the Fund with respect to which the direct action is brought at the time of the injury complained of or have acquired the shares afterwards by operation of law from a person who was a shareholder at that time. The Declaration of Trust further provides that a Fund shall be responsible for payment of attorneys’ fees and legal expenses incurred by a complaining shareholder only if required by law, and any attorneys’ fees that the Fund is obligated to pay shall be calculated using reasonable hourly rates. These provisions do not apply to claims brought under the federal securities laws.

The Declaration of Trust also requires that actions by shareholders against a Fund be brought exclusively in a federal or state court located within the State of Delaware. This provision will not apply to claims brought under the federal securities laws. Limiting shareholders’ ability to bring actions only in courts located in Delaware may cause shareholders economic hardship to litigate the action in those courts, including paying for traveling expenses of witnesses and counsel, requiring retaining local counsel, and may limit shareholders’ ability to bring a claim in a judicial forum that shareholders find favorable for disputes, which may discourage such actions.

UNDERLYING ISSUER INFORMATION

FINANCIAL HIGHLIGHTS

The Financial Highlights table is intended to help you understand the Fund's financial performance for the Fund's periods shown. Certain information reflects financial results for a single Fund share. The total return in the table represents the rate that an investor would have earned or lost on an investment in the Fund (assuming reinvestment of all dividends and distributions). This information has been audited by Cohen & Company, Ltd., the Fund's independent registered public accounting firm, whose report, along with the Fund's financial statements, is included in the Fund's Annual Certified Shareholder Report, which is available upon request.

YieldMax™ Dorsey Wright Hybrid 5 Income ETF (FIVY)

YieldMax™ Dorsey Wright Featured 5 Income ETF (FEAT)

Each listed on The Nasdaq Stock Market, LLC

January 6, 2025

**Supplement to the
Prospectus and Statement of Additional Information (“SAI”),
each dated December 10, 2024,
and where applicable a Fund’s Summary Prospectus**

Tidal Investments LLC (the “Adviser”) is the investment adviser to each of the YieldMax™ Dorsey Wright Hybrid 5 Income ETF and the YieldMax™ Dorsey Wright Featured 5 Income ETF (the “Funds”). The Funds are fund-of-funds that invest in other YieldMax™ ETFs.

Effective January 1, 2025, the Adviser acquired the trading team previously employed by ZEGA Financial LLC (“ZEGA”). ZEGA served as the sub-adviser to the YieldMax™ ETFs.

In connection with this transaction, ZEGA has ceased operations as a registered investment adviser and resigned as sub-adviser for the YieldMax™ ETFs in which the Funds may invest. Under the management of the Adviser, the same portfolio management team previously employed by ZEGA will continue to serve as portfolio managers for the YieldMax™ ETFs, now as employees of the Adviser. There are no portfolio manager changes for the YieldMax™ ETFs and no changes to any of their investment objectives, principal investment strategies, or fees.

The transaction will not result in any changes to the operations of the Funds.

All references to “ZEGA” and the “Sub-Adviser” in the Summary Prospectus, Prospectus and SAI are hereby updated to refer to the “Adviser.”

Please retain this Supplement for future reference.

SUMMARY INFORMATION

YieldMax™ Dorsey Wright Hybrid 5 Income ETF - FUND SUMMARY

Investment Objective

The Fund seeks to track the performance, before fees and expenses, of the Nasdaq Dorsey Wright Tactical Hybrid Option Income Strategy Index (the “Index”).

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.29%
Distribution and Service (12b-1) Fees	None
Other Expenses	0.00%
Acquired Fund Fees and Expenses ⁽²⁾	0.59%
Total Annual Fund Operating Expenses	<u>0.88%</u>

(1) The Fund’s adviser will pay, or require a sub-adviser to pay, all of the Fund’s expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the “1940 Act”), litigation expenses, and other non-routine or extraordinary expenses.

(2) Acquired Fund Fees and Expenses (AFFEs) are estimated based on a full fiscal year. Had they been estimated based on the remainder of the current fiscal year, AFFEs would be 0.36%. AFFEs include fees and expenses incurred indirectly by the Fund as a result of investments in other investment companies, including funds that invest exclusively in money market instruments. Because AFFEs are not borne directly by the Fund, they will not be reflected in the expense information in the Fund’s financial statements, and the information presented in the table will differ from that presented in the Fund’s financial highlights included in the Fund’s N-CSR filings.

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$90	\$281

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund follows a “passive management” (or indexing) approach to track the performance of the Index, before fees and expenses. The Index uses the Nasdaq Dorsey Wright Relative Strength Matrix methodology (the “Dorsey Wright methodology”) to select the securities included in the Index. The Index relates exclusively to the YieldMax™ family of ETFs, specifically those that provide exposure to either the share price of (i) a specific operating company or (ii) one or more exchange traded funds (collectively, the “Evaluated Securities”).

For example, the YieldMax™ TSLA Option Income Strategy ETF is eligible for inclusion in the Index. Its primary investment objective is to generate current income, with a secondary objective of providing exposure to the share price of Tesla, Inc. (“TSLA”) common

stock, subject to a cap on potential gains. In this example, TSLA is considered the “Evaluated Security.” This is for illustrative purposes only, as the YieldMax™ TSLA Option Income Strategy ETF and TSLA may not be Index constituents.

The Dorsey Wright methodology examines the Evaluated Securities that the eligible YieldMax™ ETFs track, not the ETFs themselves. Using the example above, the methodology examines only TSLA, not the YieldMax™ TSLA Option Income Strategy ETF itself. This focus on individual securities enables the Index methodology to identify those securities with the strongest price momentum (i.e., highest relative strength). Scores are assigned based on short- and long-term growth potential for each Evaluated Security, with rankings that determine Index inclusion.

At each rebalance, the Index is structured as follows:

- 40% of the five highest-ranked Evaluated Securities, according to the Dorsey Wright methodology (the “Underlying Securities”); and each Underlying Security represents approximately 8% of the Fund’s holdings, and
- 60% of the five corresponding YieldMax™ ETFs providing exposure to these Underlying Securities (collectively, the “Index Constituents”); and each YieldMax™ ETF represents approximately 12% of the Fund’s holdings.

Why Invest in the Fund?

The Fund seeks to provide targeted, rules-based exposure to select YieldMax™ ETFs and their Underlying Securities by using the Dorsey Wright methodology. This approach is intended to capture growth by systematically identifying high-momentum securities with a potential for strong returns.

1. **Targeted Exposure to High-Momentum Assets:** By investing in high-momentum securities, the Fund positions its portfolio to potentially benefit if selected securities continue their positive trends. The Dorsey Wright methodology ranks securities objectively, highlighting those that have demonstrated the highest relative strength (among those in the initial universe).
2. **Blend of Direct and ETF-Based Exposure:** The Fund provides exposure to both the highest-ranking Underlying Securities and their corresponding YieldMax™ ETFs. This approach combines direct performance with the income-focused strategies of YieldMax™ ETFs.
3. **Efficient Income Generation Potential:** Since YieldMax™ ETFs generally have a secondary focus on income, the Fund offers potential income opportunities alongside potential capital appreciation.

Evaluated Securities and Eligible YieldMax™ ETFs

To select Evaluated Securities for the Index, Dorsey, Wright & Associates, LLC (the “Index Provider”) reviews the universe of eligible YieldMax™ ETFs. Each eligible YieldMax™ ETF seeks to generate income and provide exposure, with some return limitations, to either (i) the share price of an individual company’s stock or (ii) one or more ETFs (each an “Evaluated Security” and each relevant issuer an “Underlying Issuer”). The Index excludes some YieldMax™ ETFs, such as fund-of-funds and those that seek inverse (short) exposure to the performance of a security. Please see “Additional Information About the Index” below for more information about excluded YieldMax™ ETFs.

Index Methodology

The Dorsey Wright methodology uses “Point & Figure” charting, using closing prices of each Evaluated Security to track supply and demand dynamics. This approach focuses on major price movements while filtering out minor price swings, trading volume, and time. This charting technique emphasizes significant price trends and seeks to remove short-term noise. Specifically, Point & Figure charting marks an upward trend with columns of X’s and a downward trend with columns of O’s, only updating with significant price changes, thus filtering out minor price swings. Please see “Additional Information About the Index” below for an example of a Point & Figure chart.

The Dorsey Wright methodology evaluates each Evaluated Security’s relative strength, measuring its performance relative to other Equity Securities to identify current momentum trends. It then ranks Evaluated Securities by buy signal frequency, prioritizing those with the strongest positive momentum. By incorporating both short- and long-term indicators (spanning weeks to months or longer), the methodology aims to identify strategic opportunities while minimizing excessive turnover. Relative strength, as well as the methodology’s use of buy and sell signals, are further detailed in “Additional Information About the Index.”

Rebalancing and Reconstitution

The Index is rebalanced three business days before the last trading day of each month. Rebalancing adjusts the weightings of the existing Index Constituents to maintain the Index’s intended structure. At each rebalance, each Underlying Security represents about 8% of the Fund’s portfolio, and the five corresponding YieldMax™ ETFs each represent approximately 12% of the Fund’s portfolio.

Reconstitution, which involves replacing Index Constituents, also occurs at this time but only if an Evaluated Security's relative strength declines, causing it to rank 8th or lower compared to other Evaluated Securities. In such a case, new Index Constituent (i.e., a new higher ranked Evaluated Security and its corresponding YieldMax™ ETF) will be added to the Index.

If an Underlying Security becomes ineligible for the Index between monthly reconstitutions (e.g., due to factors such as pending liquidation, delisting, or a merger), it (and its corresponding YieldMax™ ETF) will be removed from the Index. Index Constituents removed under these circumstances will not be replaced until the next Index reconstitution. For example, if hypothetical XYZ Company, the focus of hypothetical YieldMax XYZ ETF, is delisted, both XYZ Company and the YieldMax XYZ ETF would be taken out of the Index. Neither will be replaced until the next monthly Index update.

Portfolio Construction

The Fund will typically hold ten Index Constituents, investing 40% of its assets in the five Underlying Securities and 60% of its assets in the five YieldMax™ ETFs included in the Index.

The Fund will distribute income, if any, on at least a monthly basis.

The Fund attempts to invest all, or substantially all, of its assets in the Index Constituents that make up the Index. The Fund will generally use a "replication" strategy to achieve its investment objective, meaning it generally will invest in all of the Index Constituents. However, the Fund may use a "representative sampling" strategy, meaning it may invest in a sample of the securities in the Index whose risk, return and other characteristics closely resemble the risk, return and other characteristics of the Index as a whole, when the Adviser believes it is in the best interests of the Fund. For example, representative sampling may be used when replicating the Index involves practical difficulties or substantial costs, an Index Constituent becomes temporarily illiquid, unavailable, or less liquid, or as a result of legal restrictions or limitations that apply to the Fund but not to the Index.

The Fund and each YieldMax™ ETF are affiliated ETFs. The Fund is advised by Tidal Investments LLC (the "Adviser"), and each YieldMax™ ETF is advised by the Adviser and sub-advised by ZEGA Financial, LLC ("ZEGA").

The Fund is classified as "non-diversified" under the 1940 Act. The Fund will concentrate its investments (i.e., hold more than 25% of its total assets) in industries or groups of industries to the same extent as the Index concentrates. As of November 15, 2024, Index constituents assigned to the Consumer Cyclical group of industries represented 40% of the Index and the Index constituents assigned to the Technology group of industries represented 40% of the Index.

Eligible YieldMax™ ETF Strategies

The Fund indirectly gains exposure to potential share price returns of selected Underlying Securities through its investment in YieldMax™ ETFs. Each YieldMax™ ETF, using a synthetic covered call strategy, captures only a portion of potential gains if its Underlying Security's share price increases, but remains fully exposed to all losses if the share price decreases, which may not be offset by its income.

To supplement the YieldMax™ ETFs' strategies, the Fund also directly invests (typically 40% of its assets) in the Underlying Securities. This direct investment provides the Fund with uncapped exposure to share price gains, while still subjecting it to potential losses, which may not be offset by any income received.

Each YieldMax™ ETF's synthetic covered call strategy consists of:

- Synthetic Long Exposure: Gaining exposure to the Underlying Security's price movements through buying call options and selling put options.
- Covered Call Writing: Selling call options to generate income, though this caps participation in price gains above certain levels.
- Opportunistic Strategy: In certain market conditions, selling credit call spreads to potentially increase participation in the Underlying Security's price appreciation.
- U.S. Treasuries: Holding short-term U.S. Treasuries as collateral for options positions.

YieldMax™ ETFs also aim to provide monthly cash distributions from options premiums and U.S. Treasury income, although ETF shareholders, including the Fund, do not receive Underlying Security dividends. However, the Fund may receive dividends on its direct holdings in Underlying Securities.

See "Additional Information About the Funds" below for more information about the investment strategies of the YieldMax™ ETFs.

None of the Fund, the Trust, the Adviser, ZEGA, or their respective affiliates makes any representation to you as to the performance of any Underlying Security.

THE FUND, TRUST, ADVISER, AND ZEGA ARE NOT AFFILIATED WITH ANY UNDERLYING ISSUER.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Equity Market Risk. The prices of equity securities rise and fall daily. These price movements may result from factors affecting individual issuers, industries or the stock market as a whole. In addition, equity markets tend to move in cycles which may cause stock prices to fall over a short and extended periods of time. In a declining stock market, stock prices for all companies (including those in the Fund's portfolio) may decline, regardless of their long-term prospects.

YieldMax™ ETF Risks. In addition to investments in equity securities, the Fund will invest its assets in the YieldMax™ ETFs, so the Fund's investment performance is likely to be substantially related to the performance of the YieldMax™ ETFs. The Fund's NAV will change with changes in the value of the YieldMax™ ETFs in which it invests. An investment in the Fund entails more costs and expenses than the combined costs and expenses of direct investments in the YieldMax™ ETFs. Each YieldMax™ ETF is subject to the principal risks outlined for the Fund (including ETF Risks), along with the following additional risks:

- **Underlying Security Risks.** In addition to the Fund's direct holding of each Underlying Security, each YieldMax™ ETF invests in options contracts that are based on the value of its Underlying Security. This subjects each YieldMax™ ETF to certain of the same risks as if it owned shares of its Underlying Security, even though it does not. As a result, each YieldMax™ ETF is subject to the risks associated with the industry of the corresponding Underlying Issuer.
 - **BITO Risks.** From time to time, the Fund may invest in BITO (the designated Underlying Security for the YieldMax™ Bitcoin Option Income Strategy ETF). During such times, the Fund will be subject to additional risks. BITO seeks to provide investment results that correspond to the performance of Bitcoin by primarily investing in Bitcoin futures contracts. BITO does not invest directly in or hold Bitcoin. BITO is subject to many of the same risks to which the YieldMax™ ETFs are subject. For example, Counterparty Risks, Derivatives Risks, ETF Risks, Liquidity Risk, Money Market Instrument Risks, Non-Diversification Risks, and Management Risks. BITO is also subject to the additional risks, which are described in more detail in BITO's prospectus.
- **Derivatives Risk.** Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. Each YieldMax™ ETF's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or YieldMax™ ETF's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The YieldMax™ ETFs investment strategies are options-based. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events.
- **Counterparty Risk.** Each YieldMax™ ETF faces counterparty risk through its investments in options contracts, held via clearing members due to its non-membership in clearing houses, with the risk exacerbated if a clearing member defaults or if limited clearing members are willing to transact on its behalf. This risk is also magnified as the YieldMax™ ETF primarily focuses on options contracts on a single security, potentially leading to losses or hindrance in implementing its investment strategy if adverse situations with clearing members arise.
- **Price Participation Risk.** Each YieldMax™ ETF employs a strategy of selling call option contracts, limiting its participation in the value increase of the Underlying Security during the call period. Should an Underlying Security's value increase beyond the sold call options' strike price, the YieldMax™ ETF may not experience the same extent of increase, potentially underperforming the Underlying Security and experiencing a NAV decrease, especially given its full exposure to any value decrease of the Underlying Security over the call period.
- **Distribution Risk.** Each YieldMax™ ETF aims to provide monthly income, although there's no guarantee of distribution in any given month, and the distribution amounts may vary significantly. Monthly distributions may consist of capital returns, reducing each YieldMax™ ETF's NAV and trading price over time, thus potentially leading to significant losses for investors (including the Fund), especially as a YieldMax™ ETF's returns exclude any dividends paid by the Underlying Security, which may result in lesser income compared to a direct investment in the Underlying Security.

- **NAV Erosion Risk Due to Distributions.** When a YieldMax™ ETF makes a distribution, its NAV typically drops by the distribution amount on the related ex-dividend date. The repetitive payment of distributions may significantly erode a YieldMax™ ETF's NAV and trading price over time, potentially resulting in notable losses for investors (including the Fund).
- **Call Writing Strategy Risk.** The continuous application of each YieldMax™ ETF's call writing strategy impacts its ability to participate in the positive price returns of its Underlying Security, which in turn affects each YieldMax™ ETF's returns both during the term of the sold call options and over longer time frames. A YieldMax™ ETF's participation in its Underlying Security's positive price returns and its own returns will depend not only on the Underlying Security's price but also on the path the Underlying Security's price takes over time, illustrating that certain price trajectories of the Underlying Security could lead to suboptimal outcomes for the YieldMax™ ETF.
- **Single Issuer Risk.** The YieldMax™ ETFs typically focus on an individual security (Underlying Security), may experience more volatility compared to traditional pooled investments or the market generally due to issuer-specific attributes. Its performance may deviate from that of diversified investments or the overall market, making it potentially more susceptible to the specific performance and risks associated with the Underlying Security.
- **High Portfolio Turnover Risk.** Each YieldMax™ ETF may actively and frequently trade all or a significant portion of the YieldMax™ ETF's holdings. A high portfolio turnover rate increases transaction costs, which may increase the YieldMax™ ETF's expenses.
- **Liquidity Risk.** Some securities held by the YieldMax™ ETFs, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the YieldMax™ ETFs as each will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If a YieldMax™ ETF is forced to sell an illiquid security at an unfavorable time or price, the YieldMax™ ETF may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the YieldMax™ ETF from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the YieldMax™ ETFs.
- **Money Market Instrument Risk.** The YieldMax™ ETFs may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.
- **Tax Risk.** Each YieldMax™ ETF aims to qualify as a Regulated Investment Company (RIC) under Subchapter M of the Code to avoid U.S. federal income tax on distributed net investment income and net capital gain, provided certain conditions are met. Failure to meet the RIC criteria, especially if the value of held options exceeds 25% of the total ETF assets at the end of a tax quarter, could subject a YieldMax™ ETF's income to taxation at both the fund and shareholder levels, though there's a grace period to rectify such non-compliance; each YieldMax™ ETF employs a synthetic strategy, maintaining a treasury securities portfolio to aid in meeting diversification requirements.
- **U.S. Government and U.S. Agency Obligations Risk:** Each YieldMax™ ETF may invest in securities issued by the U.S. government or its agencies, where the repayment of principal and interest might be backed by the full faith and credit of the United States or solely by the issuing agency. In cases where the issuing agency or instrumentality is the sole backer, investors are reliant on that entity for repayment, with no assurance that the U.S. Government would provide financial support to such agencies or instrumentalities if not obligated, potentially posing a repayment risk.

Concentration Risk. To the extent that the Index and therefore, the Fund, concentrates in an industry, the Fund will be subject to the risk that economic, political, or other conditions that have a negative effect on that industry will negatively impact the Fund to a greater extent than if its assets were invested in a wider variety of industries. As of November 15, 2024, Index constituents assigned to the Consumer Cyclical group of industries represented 40% of the Index and the Index constituents assigned to the Technology group of industries represented 40% of the Index.

Technology Group of Industries Risk. The Index (and therefore the Fund) has significant exposure to companies in (or reliant upon) the technology group of industries, and therefore the performance of the Fund could be negatively impacted by events affecting this group of industries. Market or economic factors impacting technology companies and companies that rely heavily on technological advances could have a significant effect on the value of a Fund's investments. The value of stocks of information technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.

Consumer Cyclical Group of Industries Risk. The Index (and therefore the Fund) has significant exposure to companies in (or reliant upon) the consumer cyclical group of industries, and therefore the performance of the Fund could be negatively impacted by events affecting this group of industries. Market or economic factors impacting consumer cyclical companies could have a significant effect on the value of a Fund's investments. Because companies in the consumer cyclical sector manufacture products and provide discretionary services directly to the consumer, the success of these companies is tied closely to the performance of the overall domestic and international economy, international trade relations, supply chains, interest rates, competition and consumer confidence. Success depends heavily on disposable household income and consumer spending. Changes in demographics and consumer tastes also can affect the demand for, and success of, consumer cyclical products in the marketplace.

Index Strategy Risk. The Fund's strategy is linked to an Index maintained by the Index Provider that exercises complete control over the Index. The Index Provider may delay or add a rebalance date, which may adversely impact the performance of the Fund and its correlation to the Index. In addition, there is no guarantee that the methodology used by the Index Provider to identify constituents for the Index will achieve its intended result or positive performance. Errors in Index data, Index computations or the construction of the Index in accordance with its methodology may occur from time to time and may not be identified and/or corrected for a period of time or at all, which may have an adverse impact on the Fund.

Models and Data Risk. The composition of the Index is heavily dependent on proprietary quantitative models as well as information and data supplied by third parties ("Models and Data"). When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon may lead to the inclusion or exclusion of securities from the Index universe that would have been excluded or included had the Models and Data been correct and complete. If the composition of the Index reflects such errors, the Fund's portfolio can be expected to also reflect the errors.

Momentum Investing Risk. The Index employs a "momentum" style methodology that emphasizes selecting Underlying Securities that have had higher recent price performance compared to other Underlying Securities. Momentum can turn quickly and cause significant variation from other types of investments. The Fund may experience significant losses if momentum stops, turns or otherwise behaves differently than predicted.

Passive Investment Risk. The Fund invests in the securities included in, or representative of, its Index regardless of its investment merit. The Fund does not attempt to outperform its Index or take defensive positions in declining markets. As a result, the Fund's performance may be adversely affected by a general decline in the market segments relating to its Index.

Investment Company Securities Risk. Fund shareholders indirectly bear their proportionate share of the expenses of any investment company in which the Fund invests. The total return on such investments will be reduced by the operating expenses and fees of such other investment companies, including advisory fees.

ETF Risks

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as The Nasdaq Stock Market, LLC (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at a market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the

Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange “circuit breaker” rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged.

Market Events Risk. The Fund’s investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation (or expectations of inflation), deflation (or expectations of deflation), changes in the actual or perceived creditworthiness of issuers, general market liquidity, regulatory event, other governmental trade or market control programs and related geopolitical events. In addition, the value of the Fund’s investments may be negatively affected by the occurrence of global events such as war, terrorism, environmental disasters, natural disasters or events, country instability, and infectious disease epidemics or pandemics.. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund’s overall value to decline to a greater degree than if the Fund held a more diversified portfolio.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund’s ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund’s performance history from year to year and showing how the Fund’s average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund’s website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Michael Venuto, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Daniel Weiskopf, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only Authorized Participants (Aps) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

When available, information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

SUMMARY INFORMATION

YieldMax™ Dorsey Wright Featured 5 Income ETF - FUND SUMMARY

Investment Objective

The Fund seeks to track the performance, before fees and expenses, of the Nasdaq Dorsey Wright Tactical Option Income Strategy Index (the “Index”).

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.29%
Distribution and Service (12b-1) Fees	None
Other Expenses	0.00%
Acquired Fund Fees and Expenses⁽²⁾	0.99%
Total Annual Fund Operating Expenses	1.28%

⁽¹⁾ The Fund’s adviser will pay, or require a sub-adviser to pay, all of the Fund’s expenses, except for the following: advisory and sub-advisory fees, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the “1940 Act”), litigation expenses, and other non-routine or extraordinary expenses.

⁽²⁾ Acquired Fund Fees and Expenses (AFFEs) are estimated based on a full fiscal year. Had they been estimated based on the remainder of the current fiscal year, AFFEs would be 0.62%. AFFEs include fees and expenses incurred indirectly by the Fund as a result of investments in other investment companies, including funds that invest exclusively in money market instruments. Because AFFEs are not borne directly by the Fund, they will not be reflected in the expense information in the Fund’s financial statements, and the information presented in the table will differ from that presented in the Fund’s financial highlights included in the Fund’s N-CSR filings.

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$130	\$406

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund follows a “passive management” (or indexing) approach to track the performance of the Index, before fees and expenses. The Index uses the Nasdaq Dorsey Wright Relative Strength Matrix methodology (the “Dorsey Wright methodology”) to select the securities included in the Index. The Index relates exclusively to the YieldMax™ family of ETFs, specifically those that provide exposure to either the share price of (i) a specific operating company or (ii) one or more exchange traded funds (collectively, the “Evaluated Securities”).

For example, the YieldMax™ TSLA Option Income Strategy ETF is eligible for inclusion in the Index. Its primary investment objective is to generate current income, with a secondary objective of providing exposure to the share price of Tesla, Inc. (“TSLA”) common

stock, subject to a cap on potential gains. In this example, TSLA is considered the “Evaluated Security.” This is for illustrative purposes only, as the ETF may not be an Index constituent.

The Dorsey Wright methodology examines the Evaluated Securities that the eligible YieldMax™ ETFs track, not the ETFs themselves. Using the example above, the methodology examines only TSLA (not the YieldMax™ ETF). This focus on individual securities enables the Index methodology to identify those with the strongest price momentum (i.e., highest relative strength). Scores are assigned based on short- and long-term growth potential for each Evaluated Security, with rankings that determine Index inclusion.

At each rebalance, the Index includes the five YieldMax™ ETFs that seek exposure to the top five ranked Evaluated Securities, as identified by the Dorsey Wright methodology (these ETFs are “Index Constituents”).

Why Invest in the Fund?

The Fund seeks to provide targeted, rules-based exposure to select YieldMax™ ETFs by using the Dorsey Wright methodology. This approach is intended to capture growth by systematically identifying high-momentum securities with a potential for strong returns.

1. **Targeted Exposure to High-Momentum Assets:** By investing in YieldMax™ ETFs with exposure to high-momentum securities, the Fund positions its portfolio to potentially benefit if selected securities continue their positive trends. The Dorsey Wright methodology ranks assets objectively, highlighting those that have demonstrated the highest relative strength (among those in the initial universe).
2. **Efficient Income Generation Potential:** Since YieldMax™ ETFs generally have a secondary focus on income, the Fund offers potential income opportunities alongside potential capital appreciation.

Evaluated Securities and Eligible YieldMax™ ETFs

To select Evaluated Securities for the Index, Dorsey, Wright & Associates, LLC (the “Index Provider”) reviews the universe of eligible YieldMax™ ETFs. Each eligible YieldMax™ ETF seeks to generate income and provide exposure, with some return limitations, to either (i) the share price of an individual company’s stock or (ii) one or more ETFs (each an “Evaluated Security” and each relevant issuer an “Underlying Issuer”). The Index excludes some YieldMax™ ETFs, such as fund-of-funds and those that seek inverse (short) exposure to the performance of a security. Please see “Additional Information About the Index” below for more information about excluded YieldMax™ ETFs.

Index Methodology

The Dorsey Wright methodology uses “Point & Figure” charting, using closing prices of each Evaluated Security to track supply and demand dynamics. This approach focuses on major price movements while filtering out minor price swings, trading volume, and time. This charting technique emphasizes significant price trends and seeks to remove short-term noise. Specifically, Point & Figure charting marks an upward trend with columns of X’s and a downward trend with columns of O’s, only updating with significant price changes, thus filtering out minor price swings. Please see “Additional Information About the Index” below for an example of a Point & Figure chart.

The Dorsey Wright methodology evaluates each Evaluated Security’s relative strength, measuring its performance relative to other Evaluated Securities to identify current momentum trends. It then ranks Evaluated Securities by buy signal frequency, prioritizing those with the strongest positive momentum. By incorporating both short- and long-term indicators (spanning weeks to months or longer), the methodology aims to identify strategic opportunities while minimizing excessive turnover. Relative strength, as well as the methodology’s use of buy and sell signals, are further detailed in “Additional Information About the Index.”

Rebalancing and Reconstitution

The Index is rebalanced three business days before the last trading day of each month. Rebalancing adjusts the weightings of the existing Index Constituents to maintain the Index’s intended structure. At each rebalance, each Index Constituent represents approximately 20% of the Fund’s portfolio.

Reconstitution, which involves replacing Index Constituents, also occurs at this time but only if an Evaluated Security’s relative strength declines, causing it to rank 8th or lower compared to other Evaluated Securities. In such a case, a new Index Constituent (i.e., a new YieldMax™ ETF that corresponds to the higher ranked Evaluated Security) will be added to the Index.

If a YieldMax™ ETF becomes ineligible for the Index between monthly reconstitutions (e.g., due to factors such as pending liquidation, delisting, or a merger of its Evaluated Security), it will be removed from the Index. Index Constituents removed under these circumstances will not be replaced until the next Index reconstitution. For example, if hypothetical XYZ Company, the focus of the hypothetical YieldMax XYZ ETF, is delisted, the YieldMax XYZ ETF would be taken out of the Index. It would not be replaced until the next monthly Index update.

Portfolio Construction

The Fund will typically hold five Index Constituents. The Fund will distribute income, if any, on at least a monthly basis.

The Fund attempts to invest all, or substantially all, of its assets in the Index Constituents that make up the Index. The Fund will generally use a “replication” strategy to achieve its investment objective, meaning it generally will invest in all of the Index Constituents. However, the Fund may use a “representative sampling” strategy, meaning it may invest in a sample of the securities in the Index whose risk, return and other characteristics closely resemble the risk, return and other characteristics of the Index as a whole, when the Adviser believes it is in the best interests of the Fund. For example, representative sampling may be used when replicating the Index involves practical difficulties or substantial costs, an Index Constituent becomes temporarily illiquid, unavailable, or less liquid, or as a result of legal restrictions or limitations that apply to the Fund but not to the Index.

The Fund and each YieldMax™ ETF are affiliated ETFs. The Fund is advised by Tidal Investments LLC (the “Adviser”), and each YieldMax™ ETF is advised by the Adviser and sub-advised by ZEGA Financial, LLC (“ZEGA”).

The Fund is classified as “non-diversified” under the 1940 Act. The Fund will concentrate its investments (i.e., hold more than 25% of its total assets) in industries or groups of industries to the same extent as the Index concentrates. As of November 15, 2024, Index constituents assigned to the Consumer Cyclical group of industries represented 40% of the Index and the Index constituents assigned to the Technology group of industries represented 40% of the Index.

Eligible YieldMax™ ETF Strategies

The Fund indirectly gains exposure to potential share price returns of selected Underlying Securities through its investment in YieldMax™ ETFs. Each YieldMax™ ETF, using a synthetic covered call strategy, captures only a portion of potential gains if its Underlying Security’s share price increases, but remains fully exposed to all losses if the share price decreases, which may not be offset by its income.

Each YieldMax™ ETF’s synthetic covered call strategy consists of:

- Synthetic Long Exposure: Gaining exposure to the Underlying Security’s price movements through buying call options and selling put options.
- Covered Call Writing: Selling call options to generate income, though this caps participation in price gains above certain levels.
- Opportunistic Strategy: In certain market conditions, selling credit call spreads to potentially increase participation in the Underlying Security’s price appreciation.
- U.S. Treasuries: Holding short-term U.S. Treasuries as collateral for options positions.

YieldMax™ ETFs also aim to provide monthly cash distributions from options premiums and U.S. Treasury income, although ETF shareholders, including the Fund, do not receive Underlying Security dividends. However, the Fund may receive dividends on its direct holdings in Underlying Securities.

See “Additional Information About the Funds” below for more information about the investment strategies of the YieldMax™ ETFs.

None of the Fund, the Trust, the Adviser, ZEGA, or their respective affiliates makes any representation to you as to the performance of any Underlying Security.

THE FUND, TRUST, ADVISER, AND ZEGA ARE NOT AFFILIATED WITH ANY UNDERLYING ISSUER.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Equity Market Risk. The prices of equity securities rise and fall daily. These price movements may result from factors affecting individual issuers, industries or the stock market as a whole. In addition, equity markets tend to move in cycles which may cause stock prices to fall over a short and extended periods of time. In a declining stock market, stock prices for all companies (including those in the Fund's portfolio) may decline, regardless of their long-term prospects.

YieldMax™ ETF Risks. The Fund will invest its assets in selected eligible YieldMax™ ETFs, so the Fund's investment performance will be substantially related to the performance of the YieldMax™ ETFs. The Fund's NAV will change with changes in the value of the YieldMax™ ETFs in which it invests. An investment in the Fund entails more costs and expenses than the combined costs and expenses of direct investments in the YieldMax™ ETFs. Each YieldMax™ ETF is subject to the principal risks outlined for the Fund (including ETF Risks), along with the following additional risks:

- **Underlying Security Risks.** Each YieldMax™ ETF invests in options contracts that are based on the value of one or more underlying securities (each, an "Underlying Security"). This subjects each YieldMax™ ETF to certain of the same risks as if it owned shares of its Underlying Security, even though it does not. As a result, each YieldMax™ ETF is subject to the risks associated with the industry of the corresponding Underlying Issuer.
 - **BITO Risks.** From time to time, the Fund may invest in BITO (the designated Evaluated Security for the YieldMax™ Bitcoin Option Income Strategy ETF). During such times, the Fund will be subject to additional risks. BITO seeks to provide investment results that correspond to the performance of Bitcoin by primarily investing in Bitcoin futures contracts. BITO does not invest directly in or hold Bitcoin. BITO is subject to many of the same risks to which the YieldMax™ ETFs are subject. For example, Counterparty Risks, Derivatives Risks, ETF Risks, Liquidity Risk, Money Market Instrument Risks, Non-Diversification Risks, and Management Risks. BITO is also subject to the additional risks, which are described in more detail in BITO's prospectus
- **Derivatives Risk.** Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. Each YieldMax™ ETF's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or YieldMax™ ETF's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The YieldMax™ ETFs investment strategies are options-based. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events.
- **Counterparty Risk.** Each YieldMax™ ETF faces counterparty risk through its investments in options contracts, held via clearing members due to its non-membership in clearing houses, with the risk exacerbated if a clearing member defaults or if limited clearing members are willing to transact on its behalf. This risk is also magnified as the YieldMax™ ETF primarily focuses on options contracts on a single security, potentially leading to losses or hindrance in implementing its investment strategy if adverse situations with clearing members arise.
- **Price Participation Risk.** Each YieldMax™ ETF employs a strategy of selling call option contracts, limiting its participation in the value increase of the Underlying Security during the call period. Should an Underlying Security's value increase beyond the sold call options' strike price, the YieldMax™ ETF may not experience the same extent of increase, potentially underperforming the Underlying Security and experiencing a NAV decrease, especially given its full exposure to any value decrease of the Underlying Security over the call period.
- **Distribution Risk.** Each YieldMax™ ETF aims to provide monthly income, although there's no guarantee of distribution in any given month, and the distribution amounts may vary significantly. Monthly distributions may consist of capital returns, reducing each YieldMax™ ETF's NAV and trading price over time, thus potentially leading to significant losses for investors (including the Fund), especially as a YieldMax™ ETF's returns exclude any dividends paid by the Underlying Security, which may result in lesser income compared to a direct investment in the Underlying Security.
- **NAV Erosion Risk Due to Distributions.** When a YieldMax™ ETF makes a distribution, its NAV typically drops by the distribution amount on the related ex-dividend date. The repetitive payment of distributions may significantly erode a YieldMax™ ETF's NAV and trading price over time, potentially resulting in notable losses for investors (including the Fund).
- **Call Writing Strategy Risk.** The continuous application of each YieldMax™ ETF's call writing strategy impacts its ability to participate in the positive price returns of its Underlying Security, which in turn affects each YieldMax™ ETF's returns both during the term of the sold call options and over longer time frames. A YieldMax™ ETF's participation in its Underlying Security's positive price returns and its own returns will depend not only on the Underlying Security's price but also on the path the Underlying Security's price takes over time, illustrating that certain price trajectories of the Underlying Security could lead to suboptimal outcomes for the YieldMax™ ETF.
- **Single Issuer Risk.** Each YieldMax™ ETF, focusing on an individual security (Underlying Security), may experience more volatility compared to traditional pooled investments or the market generally due to issuer-specific attributes. Its performance may deviate from that of diversified investments or the overall market, making it potentially more susceptible to the specific performance and risks associated with the Underlying Security.

- **High Portfolio Turnover Risk.** Each YieldMax™ ETF may actively and frequently trade all or a significant portion of the YieldMax™ ETF's holdings. A high portfolio turnover rate increases transaction costs, which may increase the YieldMax™ ETF's expenses.
- **Liquidity Risk.** Some securities held by the YieldMax™ ETFs, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the YieldMax™ ETFs as each will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If a YieldMax™ ETF is forced to sell an illiquid security at an unfavorable time or price, the YieldMax™ ETF may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the YieldMax™ ETF from limiting losses, realizing gains or achieving a high correlation with the Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the YieldMax™ ETFs.
- **Money Market Instrument Risk.** The YieldMax™ ETFs may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.
- **Tax Risk.** Each YieldMax™ ETF aims to qualify as a Regulated Investment Company (RIC) under Subchapter M of the Code to avoid U.S. federal income tax on distributed net investment income and net capital gain, provided certain conditions are met. Failure to meet the RIC criteria, especially if the value of held options exceeds 25% of the total ETF assets at the end of a tax quarter, could subject a YieldMax™ ETF's income to taxation at both the fund and shareholder levels, though there's a grace period to rectify such non-compliance; each YieldMax™ ETF employs a synthetic strategy, maintaining a treasury securities portfolio to aid in meeting diversification requirements.
- **U.S. Government and U.S. Agency Obligations Risk:** Each YieldMax™ ETF may invest in securities issued by the U.S. government or its agencies, where the repayment of principal and interest might be backed by the full faith and credit of the United States or solely by the issuing agency. In cases where the issuing agency or instrumentality is the sole backer, investors are reliant on that entity for repayment, with no assurance that the U.S. Government would provide financial support to such agencies or instrumentalities if not obligated, potentially posing a repayment risk.

Concentration Risk. To the extent that the Index and therefore, the Fund, concentrates in an industry, the Fund will be subject to the risk that economic, political, or other conditions that have a negative effect on that industry will negatively impact the Fund to a greater extent than if its assets were invested in a wider variety of industries. As of November 15, 2024, Index constituents assigned to the Consumer Cyclical group of industries represented 40% of the Index and the Index constituents assigned to the Technology group of industries represented 40% of the Index.

Technology Group of Industries Risk. The Index (and therefore the Fund) has significant exposure to companies in (or reliant upon) the technology group of industries, and therefore the performance of the Fund could be negatively impacted by events affecting this group of industries. Market or economic factors impacting technology companies and companies that rely heavily on technological advances could have a significant effect on the value of a Fund's investments. The value of stocks of information technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.

Consumer Cyclical Group of Industries Risk. The Index (and therefore the Fund) has significant exposure to companies in (or reliant upon) the consumer cyclical group of industries, and therefore the performance of the Fund could be negatively impacted by events affecting this group of industries. Market or economic factors impacting consumer cyclical companies could have a significant effect on the value of a Fund's investments. Because companies in the consumer cyclical sector manufacture products and provide discretionary services directly to the consumer, the success of these companies is tied closely to the performance of the overall domestic and international economy, international trade relations, supply chains, interest rates, competition and consumer confidence. Success depends heavily on disposable household income and consumer spending. Changes in demographics and consumer tastes also can affect the demand for, and success of, consumer cyclical products in the marketplace.

Index Strategy Risk. The Fund's strategy is linked to an Index maintained by the Index Provider that exercises complete control over the Index. The Index Provider may delay or add a rebalance date, which may adversely impact the performance of the Fund and its correlation to the Index. In addition, there is no guarantee that the methodology used by the Index Provider to identify constituents for the Index will achieve its intended result or positive performance. Errors in Index data, Index computations or the construction of the

Index in accordance with its methodology may occur from time to time and may not be identified and/or corrected for a period of time or at all, which may have an adverse impact on the Fund.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation (or expectations of inflation), deflation (or expectations of deflation), changes in the actual or perceived creditworthiness of issuers, general market liquidity, regulatory event, other governmental trade or market control programs and related geopolitical events. In addition, the value of the Fund's investments may be negatively affected by the occurrence of global events such as war, terrorism, environmental disasters, natural disasters or events, country instability, and infectious disease epidemics or pandemics.. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Models and Data Risk. The composition of the Index is heavily dependent on proprietary quantitative models as well as information and data supplied by third parties ("Models and Data"). When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon may lead to the inclusion or exclusion of securities from the Index universe that would have been excluded or included had the Models and Data been correct and complete. If the composition of the Index reflects such errors, the Fund's portfolio can be expected to also reflect the errors.

Momentum Investing Risk. The Index employs a "momentum" style methodology that emphasizes selecting YieldMax™ ETFs that have had higher recent price performance compared to other YieldMax™ ETFs. Momentum can turn quickly and cause significant variation from other types of investments. The Fund may experience significant losses if momentum stops, turns or otherwise behaves differently than predicted.

Passive Investment Risk. The Fund invests in the securities included in, or representative of, its Index regardless of its investment merit. The Fund does not attempt to outperform its Index or take defensive positions in declining markets. As a result, the Fund's performance may be adversely affected by a general decline in the market segments relating to its Index.

ETF Risks

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as The Nasdaq Stock Market, LLC (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at a market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund’s overall value to decline to a greater degree than if the Fund held a more diversified portfolio.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund’s ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund’s performance history from year to year and showing how the Fund’s average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund’s website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Michael Venuto, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Daniel Weiskopf, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since 2024.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only Authorized Participants (Aps) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

When available, information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by

influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

ADDITIONAL INFORMATION ABOUT THE FUNDS

Investment Objective

The investment objective of the YieldMax™ Dorsey Wright Hybrid 5 Income ETF is to seek to track the performance, before fees and expenses, of the Nasdaq Dorsey Wright Tactical Hybrid Option Income Strategy Index.

The investment objective of the YieldMax™ Dorsey Wright Featured 5 Income ETF is to seek to track the performance, before fees and expenses, of the Nasdaq Dorsey Wright Tactical Option Income Strategy Index.

An investment objective is fundamental if it cannot be changed without the consent of the holders of a majority of the outstanding Shares. No Fund's investment objective has been adopted as a fundamental investment policy and therefore each Fund's investment objective may be changed without the consent of that Fund's shareholders upon approval by the Board of Trustees (the "Board") of Tidal Trust III (the "Trust") and at least 60 days' written notice to shareholders.

Each Fund will employ its investment strategy regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods.

YieldMax™ ETFs Principal Investment Strategies Overview. The following provides an overview of the investment strategies utilized by each of the eligible YieldMax™ ETFs (each of which relates to a different Underlying Security).

Each Fund gains indirect exposure to share price returns of selected Underlying Securities through its investments in YieldMax™ ETFs. Each YieldMax™ ETF captures only a portion of any potential gains when its Underlying Security's share price increases, as gains are generally capped due to the synthetic covered call strategy. However, each YieldMax™ ETF is fully exposed to any losses if its Underlying Security's share price decreases, which may not be offset by income generated from option premiums or U.S. Treasury investments.

Synthetic Exposure to Underlying Share Price Returns

The YieldMax™ ETFs purchase call option contracts on the Underlying Securities generally having one-month to six-month terms and strike prices equal to the then-current price of the Underlying Securities at the time of the purchases to provide the YieldMax™ ETFs exposure to the upside price returns of the Underlying Securities. As a buyer of call option contracts, each YieldMax™ ETF pays a premium to the seller of the options contracts to obtain the right to participate in the price returns of the Underlying Security beyond the strike price of the purchased call option contract at expiration (or earlier, if the YieldMax™ ETF closes the option contract prior to expiration).

The YieldMax™ ETFs simultaneously sell put option contracts on the Underlying Security to help pay the premium of the purchased call option contracts on the Underlying Securities described above. Each YieldMax™ ETF sells put option contracts that also generally have one-month to six-month terms and strike prices equal to the then-current price of the Underlying Security at the time of the sales to provide the YieldMax™ ETF exposure to the downside price returns of the Underlying Security. As a seller of a put option contract, each YieldMax™ ETF receives a premium from the buyer of the option contract in exchange for the YieldMax™ ETF's obligation, if exercised, to purchase the Underlying Security at the strike price if the buyer exercises the option contract.

The combination of the purchased call options and the sold put options provides each YieldMax™ ETF with investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

Generating Monthly Income

Each YieldMax™ ETF sells call option contracts that are based on the value of the Underlying Security to generate income via option premiums. On a monthly basis or more frequently, a YieldMax™ ETF will sell call option contracts on the Underlying Security with expiration dates of approximately one month or less in the future at strike prices that are approximately 0%-15% above the then-current share price of the Underlying Security. By doing so, a YieldMax™ ETF gives up the potential to fully participate in the Underlying Security gains, if any, beyond the strike price of the sold call options in exchange for income received in the form of call option premium. If the price of the Underlying Security is less than the call option's strike price at the expiration of the contract, the option contract will expire worthless and the YieldMax™ ETF's return on the sold call position will be the premium originally received for selling the option contract. If the price of the Underlying Security is greater than the strike price at the expiration of the option contract, the YieldMax™ ETF will forgo all of the returns that exceed the strike price of the option contract, and there will be a cost to "close out" the now in-the-money call options. The short call options are "closed out" (repurchased) prior to their expiration so that the YieldMax™ ETF will not get assigned the, now, in-

the-money call options. At times the call options may be “rolled” instead of simply closed. This is to say, new call options are simultaneously sold to open a new short call position, while the previously sold calls are repurchased to close out the original short call position.

The YieldMax™ ETFs may opportunistically sell credit call spreads instead of stand-alone call option contracts to seek greater participation in the potential appreciation of the Underlying Security’s share price, while still generating net premium income. A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. This strategy is employed when ZEGA believes the share price of the Underlying Security is likely to rise significantly in the short term or in other scenarios where it is deemed more advantageous for the Fund’s total return.

The YieldMax™ ETFs purchase multiple series of U.S. Treasury securities to collateralize the options contracts they sell. The U.S. Treasury securities also provide monthly income.

Each YieldMax™ ETF’s sale of call option contracts to generate income limits the degree to which the YieldMax™ ETF will participate in increases in the share price of the Underlying Security. This means that if the Underlying Security experiences an increase in share price, the YieldMax™ ETF will likely not experience that increase to the same extent (i.e., there is no participation beyond the level of the strike price of the sold call option contracts) and may result in the YieldMax™ ETF significantly underperforming the Underlying Security. The degree of participation in the Underlying Security gains will depend on the strike price of the short call option contracts and prevailing market conditions, especially market volatility, at the time the YieldMax™ ETF sells the call option contracts. The potential for upside returns on the Underlying Security will also depend on whether a YieldMax™ ETF fully “covers” its potential upside price return exposure to the Underlying Security by virtue of its sold call option contracts. If a YieldMax™ ETF fully covers the upside price return exposure to the Underlying Security, the YieldMax™ ETF’s potential upside to the Underlying Security’s price returns will be completely capped at the sold call options’ strike price, meaning the YieldMax™ ETF may forgo all price returns experienced by the Underlying Security beyond the strike price. If a YieldMax™ ETF partially covers its potential upside return exposure with the sold call option, the YieldMax™ ETF will have muted returns beyond the strike price of the sold call option to the extent that the Underlying Security’s share price appreciates beyond the strike price.

The sale of call option contracts will offset losses experienced by an Underlying Security only to the extent of premiums received from such sold call option contracts. The YieldMax™ ETFs expect to participate in all the underlying share price return losses over the duration of the options contracts (e.g., if the Underlying Security decreases in value by 5%, the YieldMax™ ETF should be expected to decrease in value by approximately 5%, before YieldMax™ ETF fees and expenses) beyond the income received from the sold call option contract premiums.

There is no guarantee that a YieldMax™ ETF’s investment strategy will be properly implemented, and the Fund may lose some or all of its investment.

Each YieldMax™ ETF’s NAV is dependent on the value of the YieldMax™ ETF’s options contracts, which are based principally upon the share price of the Underlying Security, the volatility of the Underlying Security, which influences short call prices, and the time remaining until the expiration date of the short call option contracts. Each YieldMax™ ETF’s synthetic long exposure strategy will effectively allow that portion of the YieldMax™ ETF’s assets to move in synch with the daily changes in the Underlying Security’s share price.

However, each YieldMax™ ETF’s participation in the potential upside in the Underlying Security returns is limited by virtue of its sold option contract positions. The degree to which a shareholder may benefit from the upside exposure to the Underlying Security obtained by a YieldMax™ ETF will depend on the time at which the investor purchases Shares of the YieldMax™ ETF and the price movements of the Underlying Security. At any given time, there may be limited upside potential. If the price of the Underlying Security is near or has exceeded the strike price of a YieldMax™ ETF’s sold call option contracts when an investor purchases Shares, such investor may have little to no upside potential remaining until the current short calls are replaced by a new set of short call, as well as remain vulnerable to significant downside risk, including the loss of their entire investment.

Each YieldMax™ ETF will invest significantly in short-term (6-month to 2-year) U.S. Treasury securities as collateral in connection with the YieldMax™ ETF’s synthetic covered call strategy. U.S. Treasury securities are government debt instruments issued by the United States Department of the Treasury and are backed by the full faith and credit of the United States government. The YieldMax™ ETFs’ investments in U.S. Treasury securities contribute to the monthly income sought by the YieldMax™ ETFs.

Exchange Traded Options Portfolio

The YieldMax™ ETFs purchase and sell a combination of call and put exchange traded options contracts. In general, put options give the holder (*i.e.*, the buyer) the right to sell an asset (or deliver the cash value of the asset, in case of certain put options) and the seller (*i.e.*, the writer) of the put has the obligation to buy the asset (or receive cash value of the asset, in case

of certain put options) at a certain defined price. Call options give the holder (*i.e.*, the buyer) the right to buy an asset (or receive cash value of the asset, in case of certain call options) and the seller (*i.e.*, the writer) the obligation to sell the asset (or deliver cash value of the asset, in case of certain call options) at a certain defined price.

FLEX options are customized options contracts that trade on an exchange but provide investors with the ability to customize key contract terms like strike price, style and expiration date while achieving price discovery in competitive, transparent auctions markets and avoiding the counterparty exposure of “over-the-counter” (“OTC”) options positions. Like traditional exchange-traded options, FLEX Options are guaranteed for settlement by the OCC, a market clearinghouse that guarantees performance by counterparties to certain derivatives contracts.

The FLEX options in which the YieldMax™ ETFs may invest are all European style options (options that are exercisable only on the expiration date). The FLEX options are listed on the Chicago Board Options Exchange.

The YieldMax™ ETFs will use the market value of its derivatives holdings for the purpose of determining compliance with the 1940 Act and the rules promulgated thereunder. Since the options held by the YieldMax™ ETFs are exchange-traded, these will be valued on a mark-to-market basis. In the event market prices are not available, the YieldMax™ ETFs will use fair value pricing pursuant to the fair value procedures adopted by the Board.

Additional Information About the Indices

Dorsey, Wright & Associates, LLC (the “Index Provider”) licenses its proprietary methodology (the “DW Methodology”) to the Funds on a non-exclusive basis. The Funds seek to track the performance of their respective Indices through this licensed methodology, for which the Adviser has paid applicable licensing fees to the Index Provider.

The Dorsey Wright methodology is a proprietary, individually licensed system the Funds can access because the Adviser paid a licensing fee.

Index Exclusions: As outlined in the Funds’ principal investment strategy disclosures, each Index excludes certain types of YieldMax™ ETFs, specifically:

- YieldMax™ ETFs that seek exposure to the share prices of multiple Evaluated Securities or indices, except those expressly allowed to invest in the share price of one or more exchange-traded funds. For example, a YieldMax™ ETF that tracks multiple stocks would be excluded, while a YieldMax™ ETF permitted to track a single ETF, such as TSLA, may be eligible for inclusion.
- YieldMax™ ETFs that aim to achieve inverse (short) exposure to a security or index, such as an ETF that seeks inverse returns on TSLA, would be excluded from each Index.
- YieldMax™ ETFs that primarily invest in other YieldMax™ ETFs (fund-of-funds), like an ETF that allocates its assets among various YieldMax™ ETFs, would not be eligible for inclusion.
- YieldMax™ ETFs that focus solely on tracking the share price of a single 1940 Act-registered ETF, unless expressly permitted. For instance, an ETF investing solely in another ETF registered under the 1940 Act would generally be excluded.

Note: Each Index excludes securities linked to YieldMax™ ETFs that seek exposure *only* to the share price of 1940 Act-registered ETFs. However, an Index may include certain securities from YieldMax™ ETFs whose strategies permit exposure to specific U.S.-listed ETFs under the Securities Exchange Act of 1934 *and/or* the 1940 Act. For example, the Bitcoin Strategy ETF (BITO), which is registered under the 1940 Act, qualifies as an Evaluated Security because it aligns with the principal strategy of the YieldMax™ Bitcoin Option Income Strategy ETF, allowing for exposure to BITO. To continue the example, if the Bitcoin Strategy ETF (BITO) is identified as one of the top 5 Evaluated Securities, then:

- In the case of the YieldMax™ Dorsey Wright Hybrid 5 Income ETF, it will invest directly in both BITO and the YieldMax™ Bitcoin Option Income Strategy ETF.
- For the YieldMax™ Dorsey Wright Featured 5 Income ETF, it will invest directly in the YieldMax™ Bitcoin Option Income Strategy ETF, without holding BITO itself.

Defined Terms: The Dorsey Wright Methodology uses “relative strength” to analyze performance patterns and identify current momentum trends for each Evaluated Security relative to other Evaluated Securities.

- “Relative strength” measures a security’s performance in relation to other securities, benchmarks, or broad market indexes. In this case, it is used to measure each Evaluated Security against the other Evaluated Securities in the Index’s initial universe. It is a momentum-based methodology (reflecting the tendency of securities to continue moving in the same direction—upward or downward—over a period of time) that relies on an objective, data-driven analysis. A security’s relative strength can improve if it rises more than the market in an uptrend, or goes down less than the market in a downtrend.

The Dorsey Wright methodology also evaluates each Evaluated Security’s relative strength using buy and sell signals from the Point & Figure charts.

- A “buy signal” indicates positive momentum surpassing a defined threshold, signaling a favorable outlook in the coming weeks to months.
- A “sell signal” suggests negative momentum, pointing to potential underperformance in the coming weeks to months.

The methodology ranks Evaluated Securities by buy signal frequency, giving priority to those with the strongest positive momentum. Short- and long-term indicators (tracking weeks to a few months and months to a year, respectively) are combined to identify strategic opportunities while reducing excessive turnover.

Point & Figure Charting: Additionally, as noted above, the Dorsey Wright methodology uses “Point & Figure” charting to track supply and demand dynamics for each Evaluated Security by focusing on price movements and removing minor fluctuations, trading volume, and time. This charting technique emphasizes significant price trends and seeks to remove short-term noise. Specifically, Point & Figure charting marks an upward trend with columns of X’s and a downward trend with columns of O’s, only updating with significant price changes, thus filtering out minor price swings.

The Point & Figure charts consider daily prices, but changes to Index constituents are made when there is sufficient differential in relative strength, which is generally based on an intermediate time frame of about three to twelve months. Positive and negative thresholds follow the same rules, just in opposite directions. As a result, both buy and sell signals generally develop within a similar timeframe, ranging from several weeks to months.

The example Point & Figure chart below relates to a hypothetical security.

Columns of X’s indicate upward price movements, while columns of O’s indicate downward movements.

Price Levels: Each row represents a \$2 price change, labeled along the y-axis, starting from \$100 and adjusted accordingly.

Reversal Amount: A new column begins when the price reverses by 6 points or three boxes in the opposite direction.

Hypothetical Security Point & Figure Chart (Revised)

Price Level	Column 1 (X)	Column 2 (O)	Column 3 (X)	Column 4 (O)	Column 5 (X)	Column 6 (O)	Column 7 (X)
\$112					X		X
\$110					X		X
\$108			X		X	O	X
\$106			X			O	X
\$104			X	O		O	
\$102				O			
\$100	X						
\$98	X						
\$96	X	O					

Explanation of the Layout

- **Column 1 (X’s):** Represents an upward movement starting from \$100.
- **Column 2 (O’s):** Reflects a downward reversal to \$98 and \$96.
- **Subsequent Columns:** Each column is dedicated solely to one direction (up or down) with a new column added whenever the price reverses by the specified amount (three boxes or \$6 in this example).

In the above Point & Figure chart:

Column 6 (O's): Represent a sell signal, and downward momentum for the hypothetical stock. This column of O's signifies that the stock has reversed from its previous upward trend (Column 5, X's) and is now moving downwards, reflecting negative momentum. The stock price reached a level that triggered a reversal, suggesting a potential loss in upward momentum and a shift to downward pressure.

Column 7 (X's): Represent a buy signal, and a return to upward momentum for the hypothetical stock. The appearance of X's in this column shows that the stock has again reversed direction from Column 6 and is now moving upward. This reversal signals a regain in positive momentum, suggesting renewed buying interest or upward price movement that could reflect strength relative to previous levels.

In summary:

Column 6 (O's) – a sell signal - indicates a decrease in momentum or bearish pressure.

Column 7 (X's) – a buy signal - indicates an increase in momentum or bullish pressure, showing a possible rebound.

Dorsey Wright Methodology Ranking - Index Construction

As described in the Funds' principal investment strategy sections, the Nasdaq Dorsey Wright Tactical Hybrid Option Income Strategy Index typically holds a total of ten securities: five YieldMax™ ETFs and the corresponding five Underlying Securities. In contrast, the Nasdaq Dorsey Wright Tactical Option Income Strategy Index generally holds five YieldMax™ ETFs. The tables below offer a visual overview of how the Dorsey Wright methodology's ranking system translates into a hypothetical portfolio structure for each Index:

Nasdaq Dorsey Wright Tactical Hybrid Option Income Strategy Index ("Hybrid Version")				
Dorsey Wright Methodology Rank	Evaluated Security		Index Constituents	Index Target Weights
1	Company B		Company B	8%
2	Company L		Company L	8%
3	Company K		Company K	8%
4	Company G		Company G	8%
5	Company A		Company A	8%
6	Company M		YieldMax™ ETF B	12%
7	Company P		YieldMax™ ETF L	12%
8	Company J		YieldMax™ ETF K	12%
			YieldMax™ ETF G	12%
			YieldMax™ ETF A	12%
			Total	100%

Nasdaq Dorsey Wright Tactical Option Income Strategy Index ("Featured Version")				
Dorsey Wright Methodology Rank	Evaluated Security		Index Constituents	Index Target Weights
1	Company B		YieldMax™ ETF B	20%
2	Company L		YieldMax™ ETF L	20%
3	Company K		YieldMax™ ETF K	20%
4	Company G		YieldMax™ ETF G	20%
5	Company A		YieldMax™ ETF A	20%
6	Company M			
7	Company P			
8	Company J			
			Total	100%

Manager of Managers Structure

Although the Funds are not currently sub-advised, the Funds and the Adviser have received exemptive relief from the SEC permitting the Adviser (subject to certain conditions and the approval of the Board) to change or select new unaffiliated sub-advisers without obtaining shareholder approval. The relief also permits the Adviser to materially amend the terms of agreements with an unaffiliated sub-adviser (including an increase in the fee paid by the Adviser to the unaffiliated sub-adviser (and not paid by the Fund)) or to continue the employment of an unaffiliated sub-adviser after an event that would otherwise cause the automatic termination of services with Board approval, but without shareholder approval. Shareholders will be notified of any unaffiliated sub-adviser changes. The Adviser has the ultimate responsibility, subject to oversight by the Board, to oversee a sub-adviser and recommend their hiring, termination and replacement.

Investments by Registered Investment Companies

Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies. However, registered investment companies are permitted to invest in other investment companies beyond the limits set forth in Section 12(d)(1) in recently adopted rules under the 1940 Act, subject to certain conditions. Each Fund may rely on Rule 12d1-4 of the 1940 Act, which provides an exemption from Section 12(d)(1) that allows the Fund to invest beyond the limits set forth in Section 12(d)(1) if the Fund satisfies certain conditions specified in Rule 12d1-4, including, among other conditions, that the Fund and its advisory group will not control (individually or in the aggregate) an acquired fund (e.g., hold more than 25% of the outstanding voting securities of an acquired fund that is a registered open-end management investment company).

Principal Risks of Investing in the Funds

The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a “principal risk” of investing in the Funds, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in a Fund. Some or all of these risks may adversely affect a Fund’s NAV per share, trading price, yield, total return and/or ability to meet its investment objective. The following risks could affect the value of your performance in the Funds: The risks below apply to each Fund as indicated in the following table. Additional information about each such risk and its potential impact on a Fund is set forth below the table.

Concentration Risk. To the extent that the Index and therefore, the Fund, concentrates in an industry, the Fund will be subject to the risk that economic, political, or other conditions that have a negative effect on that industry will negatively impact the Fund to a greater extent than if its assets were invested in a wider variety of industries.

Technology Group of Industries Risk. The Fund will, via its investments in eligible YieldMax™ ETFs, invest indirectly in options on the Underlying Securities, some or all of which are companies in (or reliant upon) the technology group of industries, and therefore the performance of the YieldMax™ ETFs (and the Fund) could be negatively impacted by events affecting this group of industries. Market or economic factors impacting technology companies and companies that rely heavily on technological advances could have a significant effect on the value of a Fund's investments. The value of stocks of information technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.

Consumer Cyclical Group of Industries Risk. The Index (and therefore the Fund) has significant exposure to companies in (or reliant upon) the consumer cyclicals group of industries, and therefore the performance of the Fund could be negatively impacted by events affecting this group of industries. The success of consumer cyclical companies is tied closely to the performance of domestic and international economies, exchange rates, interest rates, competition, consumer confidence, changes in demographics and preferences. Companies in the consumer cyclicals group of industries depend heavily on disposable household income and consumer spending, and may be strongly affected by social trends and marketing campaigns. Changes in demographics and consumer tastes also can affect the demand for, and success of, consumer cyclical products in the marketplace. These companies may be subject to severe competition, which may have an adverse impact on their profitability.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Funds have a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as the Exchange, and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. This risk may be greater for the Funds as they seek to have exposure to a single Underlying Security as opposed to a more diverse portfolio like a traditional pooled investment. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of a Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at a market price that may be below, at or above a Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of a Fund will continue to be met or will remain unchanged.

Equity Market Risk. The Funds directly, or indirectly via the Underlying ETFs, will be subject to equity market risks. The prices of equity securities rise and fall daily. These price movements may result from factors affecting individual issuers, industries or the stock market as a whole. In addition, equity markets tend to move in cycles which may cause stock prices to fall over a short and extended periods of time. In a declining stock market, stock prices for all companies (including those in the Fund's portfolio) may decline, regardless of their long-term prospects.

Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from specific issuers. The equity securities held in the Fund's portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, or sectors in which the Fund invests.

Index Strategy Risk. Each Fund's strategy is linked to an Index maintained by the Index Provider that exercises complete control over the Index. The Index Provider may delay or add a rebalance date, which may adversely impact the performance of the Fund and its correlation to the Index. In addition, there is no guarantee that the methodology used by the Index Provider to identify constituents for the Index will achieve its intended result or positive performance. Errors in Index data, Index computations or the construction of the Index in accordance with its methodology may occur from time to time and may not be identified and/or corrected for a period of time or at all, which may have an adverse impact on the Fund.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation (or expectations of inflation), deflation (or expectations of deflation), changes in the actual or perceived creditworthiness of issuers, general market liquidity, regulatory event, other governmental trade or market control programs and related geopolitical events. In addition, the value of the Fund's investments may be negatively affected by the occurrence of global events such as war, terrorism, environmental disasters, natural disasters or events, country instability, and infectious disease epidemics or pandemics.. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Models and Data Risk. The composition of each Index is heavily dependent on proprietary quantitative models as well as information and data supplied by third parties ("Models and Data"). When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon may lead to the inclusion or exclusion of securities from an Index universe that would have been excluded or included had the Models and Data been correct and complete. If the composition of an Index reflects such errors, the relevant Fund's portfolio can be expected to also reflect the errors.

Momentum Investing Risk. The Index employs a "momentum" style methodology that emphasizes selecting YieldMax™ ETFs that have had higher recent price performance compared to other YieldMax™ ETFs. Momentum can turn quickly and cause significant variation from other types of investments. The Fund may experience significant losses if momentum stops, turns or otherwise behaves differently than predicted.

New Fund Risk. Each Fund is recently organized with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions. There can be no assurance that the Funds will grow to or maintain an economically viable size.

Non-Diversification Risk. Because each Fund is "non-diversified," a Fund may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause a Fund's overall value to decline to a greater degree than if such Fund held a more diversified portfolio. This may increase the Fund's volatility and have a greater impact on such Fund's performance.

Operational Risk. Each Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Funds' service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. Each Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect a Fund's ability to meet its investment objective. Although the Funds and the Funds' investment advisor seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

YieldMax™ ETF Risks. Each Fund will invest its assets in selected eligible YieldMax™ ETFs, so a Fund's investment performance is likely to be directly related to the performance of the YieldMax™ ETFs. A Fund's NAV will change with changes in the value of the YieldMax™ ETFs. An investment in a Fund entails more costs and expenses than the combined costs and expenses of direct investments in the YieldMax™ ETFs. Each YieldMax™ ETF is subject to the principal risks outlined for the Funds (including ETF Risks), along with the following additional risks:

- Call Writing Strategy Risk.** The path dependency (i.e., the continued use) of a YieldMax™ ETF's call writing strategy will impact the extent that a YieldMax™ ETF participates in the positive price returns of the Underlying Security and, in turn, the YieldMax™ ETF's returns, both during the term of the sold call options and over longer time periods. If, for example, each month the YieldMax™ ETF were to sell 7% out-of-the-money call options having a one-month term, the YieldMax™ ETF's participation in the positive price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the YieldMax™ ETF should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of the positive price returns of the Underlying Security, or the YieldMax™ ETF may even lose money, even if the Underlying Security share price has appreciated by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both a YieldMax™ ETF's participation in the positive price returns of an Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that such security takes over time.
- Counterparty Risk.** Each YieldMax™ ETF is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, a YieldMax™ ETF's counterparty is a clearing house rather than a bank or broker. Since the YieldMax™ ETFs are not members of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the YieldMax™ ETFs will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, a YieldMax™ ETF will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by a YieldMax™ ETF with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of a YieldMax™ ETF's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of a YieldMax™ ETF might not be fully protected in the event of the clearing member's bankruptcy, as a YieldMax™ ETF would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. Each YieldMax™ ETF is also subject to the risk that a limited number of clearing members are willing to transact on the YieldMax™ ETF's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the YieldMax™ ETFs as they seek to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the YieldMax™ ETFs' behalf. If a clearing member defaults a YieldMax™ ETF could lose some or all of the benefits of a transaction entered into by the YieldMax™ ETF with the clearing member. If a YieldMax™ ETF cannot find a clearing member to transact with on the YieldMax™ ETF's behalf, the YieldMax™ ETF may be unable to effectively implement its investment strategy.
- Derivatives Risk.** The YieldMax™ ETFs' derivative investments have risks, including the imperfect correlation between the value of such instruments and the underlying assets; the loss of principal, including the potential loss of amounts greater than the initial amount invested in the derivative instrument; the possible default of the other party to the transaction; and illiquidity of the derivative investments. Use of derivatives could also result in a loss if the counterparty to the transaction does not perform as promised, including because of such counterparty's bankruptcy or insolvency. This risk may be greater during volatile market conditions. Other risks include the inability to close out a position because the trading market becomes illiquid (particularly in the OTC markets) or the availability of counterparties becomes limited for a period of time. In addition, the presence of speculators in a particular market could lead to price distortions.

Certain of the YieldMax™ ETFs' transactions in derivatives could also affect the amount, timing, and character of distributions to shareholders, which may result in a YieldMax™ ETF realizing more short-term capital gain and ordinary income subject to tax at ordinary income tax rates than it would if it did not engage in such transactions, which may adversely impact such YieldMax™ ETF's after-tax returns.

In addition, each YieldMax™ ETF's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For each of the YieldMax™ ETFs, the value of the options contracts in which the YieldMax™ ETF invests are substantially influenced by the value of the applicable Underlying Security. The YieldMax™ ETFs may experience substantial downside from specific option positions and certain option positions held by a YieldMax™ ETF may expire worthless. The options held by the YieldMax™ ETFs are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly moves with the value of the underlying instrument.

However, prior to such date, the value of an option generally does not increase or decrease at the same rate at the underlying instrument. There may at times be an imperfect correlation between the movement in values options contracts and the reference asset, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the YieldMax™ ETFs will be determined based on market quotations or other recognized pricing methods. Additionally, as each YieldMax™ ETF intends to continuously maintain exposure to the applicable Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as “rolling.” If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, a YieldMax™ ETF may experience losses.

- **Distribution Risk.** Each YieldMax™ ETF aims to provide monthly income, although there’s no guarantee of distribution in any given month, and the distribution amounts may vary significantly. Monthly distributions may consist of capital returns, reducing each YieldMax™ ETF’s NAV and trading price over time, thus potentially leading to significant losses for investors (including the Fund), especially as a YieldMax™ ETF’s returns exclude any dividends paid by the Underlying Security, which may result in lesser income compared to a direct investment in the Underlying Security.
- **High Portfolio Turnover Risk.** Each YieldMax™ ETF may actively and frequently trade all or a significant portion of its holdings. A high portfolio turnover rate increases transaction costs, which may increase a YieldMax™ ETF’s expenses.
- **Liquidity Risk.** Some securities held by the YieldMax™ ETFs, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater to the YieldMax™ ETFs as they will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If a YieldMax™ ETF is forced to sell an illiquid security at an unfavorable time or price, such YieldMax™ ETF may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent a YieldMax™ ETF from limiting losses, realizing gains or achieving a high correlation with the applicable Underlying Issuer. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the YieldMax™ ETFs.
- **Money Market Instruments Risk.** The YieldMax™ ETFs may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.
- **NAV Erosion Risk Due to Distributions.** When a YieldMax™ ETF makes a distribution, its NAV typically drops by the distribution amount on the related ex-dividend date. The repetitive payment of distributions may significantly erode a YieldMax™ ETF’s NAV and trading price over time, potentially resulting in notable losses for investors (including the Fund).
- **Price Participation Risk.** Each YieldMax™ ETF employs an investment strategy that includes the sale of call option contracts, which limits the degree to which such YieldMax™ ETF will participate in increases in value experienced by the applicable Underlying Issuer over the Call Period. This means that if the Underlying Issuer experiences an increase in value above the strike price of the sold call options during a Call Period, the applicable YieldMax™ ETF will likely not experience that increase to the same extent and may significantly underperform such Underlying Issuer over the Call Period. Additionally, because each YieldMax™ ETF is limited in the degree to which it will participate in increases in value experienced by the Underlying Issuer over each Call Period but has full exposure to any decreases in value experienced by the Underlying Issuer over the Call Period, the NAV of the YieldMax™ ETF may decrease over any given time period. Each YieldMax™ ETF’s NAV is dependent on the value of each options portfolio, which is based principally upon the performance of the Underlying Issuer. The degree of participation in Underlying Issuer gains a YieldMax™ ETF will experience will depend on prevailing market conditions, especially market volatility, at the time such YieldMax™ ETF enters into the sold call option contracts and will vary from Call Period to Call Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Issuer, changes in interest rates, changes in the actual or perceived volatility of the Underlying Issuer and the remaining time to the options’ expiration, as well as trading conditions in the options market. As the price of the Underlying Issuer changes and time moves towards the expiration of each Call Period, the value of the options contracts, and therefore a YieldMax™ ETF’s NAV, will change. However, it is not expected for a YieldMax™ ETF’s NAV to directly correlate on a day-to-day basis with the returns of the Underlying Issuer. The amount of time remaining until the option contract’s expiration date affects the impact of the potential options contract income on a YieldMax™ ETF’s NAV, which may not be in full effect until the expiration date of the YieldMax™ ETF’s options contracts. Therefore, while changes in the price of the Underlying Issuer will result in changes to a YieldMax™

ETF's NAV, the YieldMax™ ETFs generally anticipate that the rate of change in a YieldMax™ ETF's NAV will be different than that experienced by the Underlying Issuer.

- **Single Issuer Risk.** Each YieldMax™ ETF, focusing on an individual security (Underlying Security), may experience more volatility compared to traditional pooled investments or the market generally due to issuer-specific attributes. Its performance may deviate from that of diversified investments or the overall market, making it potentially more susceptible to the specific performance and risks associated with the Underlying Security.
- **Tax Risk.** Each YieldMax™ ETF intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, each Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If a Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, each Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If a Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If a Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.
- **Underlying Security Risks.** In addition to YieldMax™ Dorsey Wright Hybrid 5 Income ETF's direct holding of each Underlying Security, each YieldMax™ ETF invests in options contracts that are based on the value of its Underlying Security. This subjects each YieldMax™ ETF to certain of the same risks as if it owned shares of its Underlying Security, even though it does not. As a result, each YieldMax™ ETF is subject to the risks associated with the industry of the corresponding Underlying Issuer.
 - **BITO Risks.** From time to time, the Fund may invest in BITO (the designated Underlying Security for the YieldMax™ Bitcoin Option Income Strategy ETF). During such times, the Fund will be subject to additional risks:
 - **BITO Risks - General.** BITO seeks to provide investment results that correspond to the performance of Bitcoin by primarily investing in Bitcoin futures contracts. BITO does not invest directly in or hold Bitcoin. BITO is subject to many of the same risks to which the YieldMax™ ETFs are subject. For example, Counterparty Risks, Derivatives Risks, ETF Risks, Liquidity Risk, Money Market Instrument Risks, Non-Diversification Risks, and Management Risks. BITO is also subject to the following risks, which are described in more detail in BITO's prospectus:
 - **Bitcoin Risks** – BITO is subject to significant risks from investing indirectly in Bitcoin (a digital asset). Bitcoin's price is highly volatile, influenced by technological developments, regulatory changes, and market sentiment. The decentralized nature of Bitcoin exposes it to fraud, theft, and market manipulation, while its trading platforms face operational vulnerabilities, including security breaches and liquidity risks. Additionally, BITO, which invests in Bitcoin futures may experience challenges such as liquidity constraints, counterparty risks, and complexities in managing futures contracts. Regulatory uncertainties further exacerbate these risks, as changes in laws or enforcement actions could materially impact Bitcoin's market value and BITO's performance. Blockchain technology, which underpins Bitcoin, is also relatively untested, carrying additional risks related to technological failures, cybersecurity breaches, and potential forks, all of which can negatively affect BITO's investments.
 - **Bitcoin Futures Risk** - The market for Bitcoin futures may be less developed, and potentially less liquid and more volatile, than more established futures markets.
 - **Bitcoin Futures Capacity Risk** – If BITO encounters obstacles in obtaining exposure to Bitcoin futures contracts, such as limited liquidity or disruptions in the market, it may fail to achieve its investment objective.
 - **Cost of Futures Investment Risk** - When nearing expiration, BITO will “roll” Bitcoin futures contracts by selling expiring contracts and purchasing higher-priced, longer-dated contracts, a process particularly affected by contango, historically common in Bitcoin futures, potentially impacting BITO's performance compared to spot Bitcoin and hindering its investment objectives, especially if investing in back-month futures contracts.
 - **Cayman Subsidiary Investment Risk** – BITO invests in futures via a wholly owned subsidiary domiciled in the Cayman Islands. Changes in laws could result in the inability of BITO to operate as intended and could negatively affect BITO and its shareholders.
 - **Borrowing Risks** - Borrowing by BITO could lead to forced liquidation of positions in unfavorable market conditions to meet repayment obligations, amplifying the risk of loss and potentially raising BITO's volatility.
 - **Concentration Risks** – Due to BITO's substantial allocation to Bitcoin futures, BITO is susceptible to larger market fluctuations compared to funds with more diversified investments across various industries.
- **U.S. Government and U.S. Agency Obligations Risk:** Each eligible YieldMax™ ETF may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may

be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

PORTFOLIO HOLDINGS

Information about each Fund's daily portfolio holdings will be available on the Funds' website at www.yieldmaxetfs.com.

A complete description of each Fund's policies and procedures with respect to the disclosure of a Fund's portfolio holdings is available in the Fund's SAI.

MANAGEMENT

Investment Adviser

Tidal Investments LLC ("Tidal" or the "Adviser"), located at 234 West Florida Street, Suite 203, Milwaukee, Wisconsin 53204, is an SEC registered investment adviser and a Delaware limited liability company. Tidal was founded in March 2012 and is dedicated to understanding, researching and managing assets within the expanding ETF universe. As of October 31, 2024, Tidal had assets under management of approximately \$23.36 billion and served as the investment adviser or sub-adviser for 227 registered funds.

Tidal serves as investment adviser to the Funds and has overall responsibility for the general management and administration of the Funds pursuant to an investment advisory agreement with the Trust, on behalf of each Fund (the "Advisory Agreement"). The Adviser is responsible for the day-to-day management of the Funds' portfolios, including determining the securities purchased and sold by each Fund and trading portfolio securities for each Fund, subject to the supervision of the Board. The Adviser also arranges for transfer agency, custody, fund administration, and all other related services necessary for the Funds to operate. For the services provided to the Funds, each Fund pays the Adviser a unitary management fee of 0.29%, which is calculated daily and paid monthly, at an annual rate based on such Fund's average daily net assets.

Under the Advisory Agreement, in exchange for a single unitary management fee from the Fund, the Adviser has agreed to pay all expenses incurred by such Fund except for interest charges on any borrowings, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, extraordinary expenses, distribution fees and expenses paid by a Fund under any distribution plan adopted pursuant to Rule 12b-1 under the 1940 Act, and the unitary management fee payable to the Adviser (collectively, the "Excluded Expenses").

A discussion regarding the basis for the Board's approval of each Fund's Advisory Agreement will be available in the semi-annual Certified Shareholder Report on Form N-CSR for the period ending January 31, 2025.

Portfolio Managers

The following individuals (each, a "Portfolio Manager") have served as portfolio managers of each Fund since inception in 2024. Messrs. Venuto and Weiskopf are jointly and primarily responsible for the day-to-day management of each Fund.

Michael Venuto, Portfolio Manager for the Adviser

Mr. Venuto is a co-founder and has been the Chief Investment Officer of the Adviser since 2012. Mr. Venuto is an ETF industry veteran with over a decade of experience in the design and implementation of ETF-based investment strategies. Previously, he was Head of Investments at Global X Funds where he provided portfolio optimization services to institutional clients. Before that, he was Senior Vice President at Horizon Kinetics where his responsibilities included new business development, investment strategy and client and strategic initiatives.

Daniel Weiskopf, Portfolio Manager for the Adviser

Mr. Weiskopf serves as Portfolio Manager at Tidal, having joined the firm in May 2018. Mr. Weiskopf has been an ETF Strategist since 2003, and was the portfolio manager and founder of MH Capital Partners, a small cap hedge fund from 1995 until 2003 which focused on asset light business models. Firms that Mr. Weiskopf has been affiliated with include, Investment Planners, Forefront Capital, UBS Financial and American Diversified Enterprises, an affiliated of Allen & Company. Mr. Weiskopf graduated with an MBA from Fordham University Gabelli School of Business, and holds a series 7 and 65 license.

The Funds' SAI provides additional information about each portfolio manager's compensation structure, other accounts that each portfolio manager manages, and each portfolio manager's ownership of Shares.

HOW TO BUY AND SELL SHARES

Each Fund issues and redeems Shares only in Creation Units at the NAV per share next determined after receipt of an order from an AP. Only APs may acquire Shares directly from a Fund, and only APs may tender their Shares for redemption directly to the Funds, at NAV. APs must be a member or participant of a clearing agency registered with the SEC and must execute a Participant Agreement that has been agreed to by the Distributor (defined below), and that has been accepted by a Fund's transfer agent, with respect to purchases and redemptions of Creation Units. Once created, Shares trade in the secondary market in quantities less than a Creation Unit.

In order to purchase Creation Units of a Fund, an AP must generally deposit a designated portfolio of equity securities (the "Deposit Securities") and/or a designated amount of U.S. cash. Purchases and redemptions of Creation Units primarily with cash, rather than through in-kind delivery of portfolio securities, may cause the Funds to incur certain costs. These costs could include brokerage costs or taxable gains or losses that it might not have incurred if it had made redemption in-kind. These costs could be imposed on a Fund, and thus decrease the Fund's NAV, to the extent that the costs are not offset by a transaction fee payable by an AP. Most investors buy and sell Shares in secondary market transactions through brokers. Individual Shares are listed for trading on the secondary market on the Exchange and can be bought and sold throughout the trading day like other publicly traded securities.

When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offer price in the secondary market on each leg of a round trip (purchase and sale) transaction. In addition, because secondary market transactions occur at market prices, you may pay more than NAV when you buy Shares, and receive less than NAV when you sell those Shares.

Book Entry

Shares are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company ("DTC") or its nominee is the record owner of all outstanding Shares.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. DTC's participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book-entry or "street name" through your brokerage account.

Frequent Purchases and Redemptions of Shares

None of the Funds imposes any restrictions on the frequency of purchases and redemptions of Shares. In determining not to approve a written, established policy, the Board evaluated the risks of market timing activities by a Fund's shareholders. Purchases and redemptions by APs, who are the only parties that may purchase or redeem Shares directly with a Fund, are an essential part of the ETF process and help keep Share trading prices in line with the NAV. As such, the Funds accommodate frequent purchases and redemptions by APs. However, the Board has also determined that frequent purchases and redemptions for cash may increase tracking error and portfolio transaction costs and may lead to the realization of capital gains. To minimize these potential consequences of frequent purchases and redemptions, each Fund employs fair value pricing and may impose transaction fees on purchases and redemptions of Creation Units to cover the custodial and other costs incurred by such Fund in effecting trades. In addition, the Funds and the Adviser reserve the right to reject any purchase order at any time.

Determination of Net Asset Value

Each Fund's NAV is calculated as of the scheduled close of regular trading on the New York Stock Exchange ("NYSE"), generally 4:00 p.m. Eastern Time, each day the NYSE is open for regular business. The NAV for the Funds is calculated by dividing such Fund's net assets by its Shares outstanding.

In calculating its NAV, each Fund generally value its assets on the basis of market quotations, last sale prices, or estimates of value furnished by a pricing service or brokers who make markets in such instruments. If such information is not available for a security held by a Fund or is determined to be unreliable, the security will be valued at fair value estimates under guidelines established by the Adviser (as described below).

Fair Value Pricing

The Board has designated the Adviser as the "valuation designee" for the Fund under Rule 2a-5 of the 1940 Act, subject to its oversight. The Adviser has adopted procedures and methodologies to fair value Fund investments whose market prices are not "readily available" or are deemed to be unreliable. For example, such circumstances may arise when: (i) an investment has been delisted or has had its trading halted or suspended; (ii) an investment's primary pricing source is unable or unwilling to provide a price; (iii) an investment's primary trading market is closed during regular market hours; or (iv) an investment's value is materially affected by events occurring

after the close of the investment's primary trading market. Generally, when fair valuing an investment, the Adviser will take into account all reasonably available information that may be relevant to a particular valuation including, but not limited to, fundamental analytical data regarding the issuer, information relating to the issuer's business, recent trades or offers of the investment, general and/or specific market conditions, and the specific facts giving rise to the need to fair value the investment. Fair value determinations are made in good faith and in accordance with the fair value methodologies included in the Adviser-adopted valuation procedures. Due to the subjective and variable nature of fair value pricing, there can be no assurance that the Adviser will be able to obtain the fair value assigned to the investment upon the sale of such investment.

Delivery of Shareholder Documents – Householding

Householding is an option available to certain investors of the Funds. Householding is a method of delivery, based on the preference of the individual investor, in which a single copy of certain shareholder documents can be delivered to investors who share the same address, even if their accounts are registered under different names. Householding for the Funds is available through certain broker-dealers. If you are interested in enrolling in householding and receiving a single copy of prospectuses and other shareholder documents, please contact your broker-dealer. If you are currently enrolled in householding and wish to change your householding status, please contact your broker-dealer.

DIVIDENDS, DISTRIBUTIONS, AND TAXES

Dividends and Distributions

The Funds intend to pay out dividends and interest income, if any, monthly, and distribute any net realized capital gains to their shareholders at least annually.

The Funds will declare and pay income and capital gain distributions, if any, in cash. Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available. Your broker is responsible for distributing the income and capital gain distributions to you.

Taxes

The following discussion is a summary of some important U.S. federal income tax considerations generally applicable to investments in the Funds. Your investment in a Fund may have other tax implications. Please consult your tax advisor about the tax consequences of an investment in Shares, including the possible application of foreign, state, and local tax laws.

Each Fund intends to qualify each year for treatment as a regulated investment company (a "RIC") under the Internal Revenue Code of 1986, as amended. If it meets certain minimum distribution requirements, a RIC is not subject to tax at the fund level on income and gains from investments that are timely distributed to shareholders. However, a Fund's failure to qualify as a RIC or to meet minimum distribution requirements would result (if certain relief provisions were not available) in fund-level taxation and, consequently, a reduction in income available for distribution to shareholders.

Unless your investment in Shares is made through a tax-exempt entity or tax-advantaged account, such as an IRA plan, you need to be aware of the possible tax consequences when a Fund makes distributions, when you sell your Shares listed on the Exchange, and when you purchase or redeem Creation Units (institutional investors only).

The following general discussion of certain U.S. federal income tax consequences is based on provisions of the Code and the regulations issued thereunder as in effect on the date of this SAI. New legislation, as well as administrative changes or court decisions, may significantly change the conclusions expressed herein, and may have a retroactive effect with respect to the transactions contemplated herein.

Taxes on Distributions. Each Fund intends to pay out dividends and interest income, if any, monthly, and distribute any net realized capital gains to its shareholders at least annually. For federal income tax purposes, distributions of net investment income are generally taxable as ordinary income or qualified dividend income. Taxes on distributions of net capital gains (if any) are determined by how long the Fund owned the investments that generated them, rather than how long a shareholder has owned their Shares. Sales of assets held by a Fund for more than one year generally result in long-term capital gains and losses, and sales of assets held by such Fund for one year or less generally result in short-term capital gains and losses. Distributions of a Fund's net capital gain (the excess of net long-term capital gains over net short-term capital losses) that are reported by such Fund as capital gain dividends ("Capital Gain Dividends") will be taxable as long-term capital gains. Distributions of short-term capital gain will generally be taxable as ordinary income. Dividends and distributions are generally taxable to you whether you receive them in cash or reinvest them in additional Shares.

Distributions reported by a Fund as "qualified dividend income" are generally taxed to non-corporate shareholders at rates applicable to long-term capital gains, provided certain holding period and other requirements are met. "Qualified dividend income" generally is income derived from dividends paid by U.S. corporations or certain foreign corporations that are either incorporated in a U.S. possession or eligible for tax benefits under certain U.S. income tax treaties. In addition, dividends that a Fund receives in respect of stock of certain foreign corporations may be qualified dividend income if that stock is readily tradable on an established U.S. securities market. Corporate

shareholders may be entitled to a dividends-received deduction for the portion of dividends they receive from a Fund that are attributable to dividends received by such Fund from U.S. corporations, subject to certain limitations.

Shortly after the close of each calendar year, you will be informed of the character of any distributions received from a Fund.

In addition to the federal income tax, certain individuals, trusts, and estates may be subject to a Net Investment Income (“NII”) tax of 3.8%. The NII tax is imposed on the lesser of: (i) a taxpayer’s investment income, net of deductions properly allocable to such income; or (ii) the amount by which such taxpayer’s modified adjusted gross income exceeds certain thresholds (\$250,000 for married individuals filing jointly, \$200,000 for unmarried individuals and \$125,000 for married individuals filing separately). Each Fund’s distributions are includable in a shareholder’s investment income for purposes of this NII tax. In addition, any capital gain realized by a shareholder upon a sale or redemption of shares of a Fund is includable in such shareholder’s investment income for purposes of this NII tax.

In general, your distributions are subject to federal income tax for the year in which they are paid. Certain distributions paid in January, however, may be treated as paid on December 31 of the prior year. Distributions are generally taxable even if they are paid from income or gains earned by a Fund before your investment (and thus were included in the Shares’ NAV when you purchased your Shares).

You may wish to avoid investing in a Fund shortly before a dividend or other distribution, because such a distribution will generally be taxable even though it may economically represent a return of a portion of your investment.

If you are neither a resident nor a citizen of the United States or if you are a foreign entity, distributions (other than Capital Gain Dividends) paid to you by a Fund will generally be subject to a U.S. withholding tax at the rate of 30%, unless a lower treaty rate applies. The Funds may, under certain circumstances, report all or a portion of a dividend as an “interest-related dividend” or a “short-term capital gain dividend,” which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met.

Under the Foreign Account Tax Compliance Act (“FATCA”), the Funds may be required to withhold a generally nonrefundable 30% tax on distributions of net investment income paid to (a) certain “foreign financial institutions” unless such foreign financial institution agrees to verify, monitor, and report to the IRS the identity of certain of its account holders, among other items (or unless such entity is otherwise deemed compliant under the terms of an intergovernmental agreement between the United States and the foreign financial institution’s country of residence), and (b) certain “non-financial foreign entities” unless such entity certifies to the Fund that it does not have any substantial U.S. owners or provides the name, address, and taxpayer identification number of each substantial U.S. owner, among other items. This FATCA withholding tax could also affect a Fund’s return on its investments in foreign securities or affect a shareholder’s return if the shareholder holds its Fund shares through a foreign intermediary. You are urged to consult your tax adviser regarding the application of this FATCA withholding tax to your investment in a Fund and the potential certification, compliance, due diligence, reporting, and withholding obligations to which you may become subject in order to avoid this withholding tax.

For foreign shareholders to qualify for an exemption from backup withholding, described above, the foreign shareholder must comply with special certification and filing requirements. Foreign shareholders in a Fund should consult their tax advisors in this regard.

Taxes When Shares are Sold on the Exchange

Any capital gain or loss realized upon a sale of Shares generally is treated as a long-term capital gain or loss if Shares have been held for more than one year and as a short-term capital gain or loss if Shares have been held for one year or less. However, any capital loss on a sale of Shares held for six months or less is treated as long-term capital loss to the extent of Capital Gain Dividends paid with respect to such Shares. Any loss realized on a sale will be disallowed to the extent Shares of a Fund are acquired, including through reinvestment of dividends, within a 61-day period beginning 30 days before and ending 30 days after the sale of substantially identical Shares.

Taxes on Purchases and Redemptions of Creation Units

An AP having the U.S. dollar as its functional currency for U.S. federal income tax purposes who exchanges securities for Creation Units generally recognizes a gain or a loss. The gain or loss will be equal to the difference between the value of the Creation Units at the time of the exchange and the exchanging AP’s aggregate basis in the securities delivered plus the amount of any cash paid for the Creation Units. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanging AP’s basis in the Creation Units and the aggregate U.S. dollar market value of the securities received, plus any cash received for such Creation Units. The IRS may assert, however, that a loss that is realized upon an exchange of securities for Creation Units may not be currently deducted under the rules governing “wash sales” (for an AP who does not mark-to-market their holdings) or on the basis that there has been no significant change in economic position. Persons exchanging securities should consult their own tax advisor with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if Shares comprising the Creation Units have been held for more than one year and as a short-term capital gain or loss if such Shares have been held for one year or less.

The Funds may include a payment of cash in addition to, or in place of, the delivery of a basket of securities upon the redemption of Creation Units. The Funds may sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause a

Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, a Fund may be less tax efficient if it includes such a cash payment in the proceeds paid upon the redemption of Creation Units.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Funds. It is not a substitute for personal tax advice. You also may be subject to foreign, state and local tax on Fund distributions and sales of Shares. Consult your personal tax advisor about the potential tax consequences of an investment in Shares under all applicable tax laws. For more information, please see the section entitled "Federal Income Taxes" in the SAI.

DISTRIBUTION

Foreside Fund Services, LLC (the "Distributor"), the Funds' distributor, is a broker-dealer registered with the SEC. The Distributor distributes Creation Units for the Fund on an agency basis and does not maintain a secondary market in Shares. The Distributor has no role in determining the policies of the Funds or the securities that are purchased or sold by the Funds. The Distributor's principal address is Three Canal Plaza, Suite 100, Portland, Maine 04101.

The Board has adopted a Distribution (Rule 12b-1) Plan (the "Plan") pursuant to Rule 12b-1 under the 1940 Act. In accordance with the Plan, each Fund is authorized to pay an amount up to 0.25% of its average daily net assets each year to pay distribution fees for the sale and distribution of its Shares.

No Rule 12b-1 fees are currently paid by the Funds, and there are no plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, because the fees are paid out of assets of the respective Fund on an ongoing basis, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

PREMIUM/DISCOUNT INFORMATION

When available, information regarding how often Shares of the Funds traded on the Exchange at a price above (*i.e.*, at a premium) or below (*i.e.*, at a discount) the NAV of such Fund can be found on the Funds' website at www.yieldmaxetfs.com.

ADDITIONAL NOTICES

Shares are not sponsored, endorsed, or promoted by the Exchange. The Exchange is not responsible for, nor has it participated in the determination of, the timing, prices, or quantities of Shares to be issued, nor in the determination or calculation of the equation by which Shares are redeemable. The Exchange has no obligation or liability to owners of Shares in connection with the administration, marketing, or trading of Shares.

Without limiting any of the foregoing, in no event shall the Exchange have any liability for any lost profits or indirect, punitive, special, or consequential damages even if notified of the possibility thereof.

The Adviser and the Funds make no representation or warranty, express or implied, to the owners of Shares or any member of the public regarding the advisability of investing in securities generally or in any Fund particularly.

The Third Amended and Restated Declaration of Trust ("Declaration of Trust") provides a detailed process for the bringing of derivative or direct actions by shareholders in order to permit legitimate inquiries and claims while avoiding the time, expense, distraction, and other harm that can be caused to a Fund or its shareholders as a result of spurious shareholder demands and derivative actions. Prior to bringing a derivative action, a demand by three unrelated shareholders must first be made on a Fund's Trustees. The Declaration of Trust details various information, certifications, undertakings and acknowledgments that must be included in the demand. Following receipt of the demand, the trustees have a period of 90 days, which may be extended by an additional 60 days, to consider the demand. If a majority of the Trustees who are considered independent for the purposes of considering the demand determine that maintaining the suit would not be in the best interests of the Fund, the Trustees are required to reject the demand and the complaining shareholders may not proceed with the derivative action unless the shareholders are able to sustain the burden of proof to a court that the decision of the Trustees not to pursue the requested action was not a good faith exercise of their business judgment on behalf of the Fund. The Declaration of Trust further provides that shareholders owning Shares representing no less than a majority of a Fund's outstanding shares must join in bringing the derivative action. If a demand is rejected, the complaining shareholders will be responsible for the costs and expenses (including attorneys' fees) incurred by the Fund in connection with the consideration of the demand, if a court determines that the demand was made without reasonable cause or for an improper purpose. If a derivative action is brought in violation of the Declaration of Trust, the shareholders bringing the action may be responsible for the Fund's costs, including attorneys' fees, if a court determines that the action was brought without reasonable cause or for an improper purpose. The Declaration of Trust provides that no shareholder may bring a direct action claiming injury as a shareholder of the Trust, or any Fund, where the matters alleged (if true) would give rise to a claim by the Trust or by the Trust on behalf of a Fund, unless the shareholder has suffered an injury distinct from that suffered by the shareholders of the Trust, or the Fund, generally. Under the Declaration of Trust, a shareholder bringing a direct claim must be a shareholder of the Fund with respect to which the direct action is brought at the time of the injury complained of or have acquired the shares afterwards by operation of law from a person who was a shareholder at that time. The Declaration of Trust further provides that a Fund shall be responsible for payment of attorneys' fees and legal expenses incurred by a complaining shareholder

only if required by law, and any attorneys' fees that the Fund is obligated to pay shall be calculated using reasonable hourly rates. These provisions do not apply to claims brought under the federal securities laws.

The Declaration of Trust also requires that actions by shareholders against a Fund be brought exclusively in a federal or state court located within the State of Delaware. This provision will not apply to claims brought under the federal securities laws. Limiting shareholders' ability to bring actions only in courts located in Delaware may cause shareholders economic hardship to litigate the action in those courts, including paying for traveling expenses of witnesses and counsel, requiring retaining local counsel, and may limit shareholders' ability to bring a claim in a judicial forum that shareholders find favorable for disputes, which may discourage such actions.

FINANCIAL HIGHLIGHTS

This section would ordinarily include Financial Highlights for the Funds. The Financial Highlights tables are intended to help you understand the performance of each Fund for that Fund's periods of operations. Because the Funds have not yet commenced operations as of the date of this Prospectus, no Financial Highlights are shown.

SUMMARY INFORMATION

YieldMax™ AI & Tech Portfolio Option Income ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income. The Fund's secondary objective is to seek capital appreciation via investments in a select portfolio of AI and Technology Companies (defined below).

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	0.99%

- (1) The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), and litigation expenses and other non-routine or extraordinary expenses.
- (2) Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks income and capital appreciation. The Fund's strategy involves: (1) constructing a portfolio of U.S.-listed equity securities of AI and Technology Companies (each, an "Underlying Security") (the "Equity Strategy") and (2) generating income through an options portfolio (the "Options Strategies"), which involve using options contracts on Underlying Securities and/or AI and Technology ETFs (described below). The Fund will also maintain a minor allocation to cash or U.S. Treasuries, not exceeding ten percent of its total assets.

Equity Strategy

The Fund's investment sub-adviser, ZEGA Financial, LLC ("ZEGA" or the "Sub-Adviser"), selects the AI and Technology Companies in which the Fund will invest. AI and Technology Companies are companies involved in AI software, cloud infrastructure, AI semiconductors, network infrastructure, AI consulting services, software and IT services, technology hardware manufacturing and distribution, semiconductor production, interactive media, and diversified consumer services related to technology and entertainment.

To enable the Fund to effectively implement its Options Strategies, ZEGA evaluates the liquidity of a potential company's common stock and the liquidity of its options contracts. The Fund may invest in companies of any market capitalization size. ZEGA will also evaluate price level and implied volatility (i.e., a measure of how much the market believes the price of a stock or other underlying asset will move in the future) when selecting companies for investment and will monitor for these factors when determining whether to select new companies or remove existing companies from the portfolio.

AI and Technology Companies may include companies from foreign countries, including emerging markets. Underlying Securities may include depositary receipts, such as American Depositary Receipts ("ADRs") and Global Depositary Receipts ("GDRs"). The Fund will concentrate its investments (i.e., hold 25% or more of its total assets) in securities of companies with principal business activities in the industry, if any, assigned to AI and Technology Companies.

The Fund's equity portfolio will generally be comprised of between fifteen and thirty companies. Dividends, if any, paid by the Fund's equity portfolio holdings will contribute to the Fund's income generation. In addition, the Fund's equity portfolio may provide capital appreciation. The Fund's strategy may result in high portfolio turnover on an annual basis.

Options Strategies

The Fund seeks to generate income from engaging in the Options Strategies primarily using options contracts on some or all of its Underlying Securities. In particular, the Fund will receive income in the form of a premium when it writes (sells) an option. By selling options, the Fund will earn premiums from buyers who pay for the right to buy or sell the underlying asset at a predetermined price. The Sub-Adviser can implement the Options Strategies in various market conditions. Depending on the Sub-Adviser's outlook, ZEGA will select one Options Strategy or a combination of Options Strategies that it believes will best provide the Fund with current income while generally also attempting to capture some upside appreciation (potential for increase in asset value). Additionally, the Sub-Adviser considers the performance of the underlying securities. In some instances, the aim is to generate additional gains if the underlying security increases in value, while, in other cases, the aim is to limit losses if the underlying security decreases in value. Further, depending on the Sub-Adviser's assessment of one or more of the Underlying Securities' options contracts (e.g., they are insufficiently liquid or too costly), the Fund may employ Options Strategies using options on an "AI and Technology ETF" (i.e., a passively-managed, U.S.-listed ETF that seeks to track the performance of an AI or Technology Index (described below)). The Fund's use of Options Strategies with Underlying Securities or ETFs will always be covered (e.g., the Fund may do call or put spreads).

The Fund may be subject to different outcomes depending on the Options Strategies used. For example:

- When writing a **covered call** (selling a call option on security the Fund already owns), the Fund might limit its potential for capital appreciation in exchange for premium income, which also provides some downside protection should the Underlying Security decline in value.
- When selling a **credit spread** (writing a call option at one strike price and buying another call option at a higher strike price or writing a put option at one strike price and buying another put option at a lower strike price), the Fund might limit the potential loss compared to selling an option outright, by capping it at the difference between the strike prices minus the net premium received. In a best case scenario, the options expire worthless and the Fund retains the premium on the written option.
- When selling a **diagonal call spread** (selling a call option with a nearer expiration date and buying a call option with a later expiration date at a different strike price), the Fund might benefit from the time decay (i.e., the reduction in an option's value as the time to its expiration date approaches) of the nearer-term option. An option's decay accelerates as its expiration date gets closer because there is less time for an investor to earn a profit from that option; however, there is no guarantee that the written option will expire worthless.
- Using an Options Strategy such as **cash-secured put selling** (selling put options while holding enough cash to purchase the underlying security if assigned), the Fund can potentially buy securities at lower prices should the Underlying Security decline in value due to the premium received, or retain the premium if the Underlying Security remains the same or increases in value.
- When selling **calendar call spreads** (selling a short-term option and buying a longer-term option at the same strike price), the Fund might benefit from the faster time decay of the short-term option. However, if the written option is exercised, the loss is offset by the premium received as well as the increase in value of the longer-term option.
- When selling **collars** (selling a call option and buying a put option to protect against significant price movements), the Fund might be able to generate income from the premium received while limiting potential losses. In a best case scenario, the security's share price falls below the put strike price, and the Fund gains the difference between the security's share price and strike price. Otherwise, the Fund will experience losses that will be partially offset by the premium received on the written option.

These Options Strategies impact the risk-return profile of the Fund, potentially affecting volatility, income generation, upside capture (gain potential), and capital preservation (protecting value).

Additionally, the premiums the Fund receives from selling options are directly influenced by market volatility; higher volatility (larger price swings) typically results in higher premiums. Therefore, the Sub-Adviser analyzes market conditions to determine the timing and

type of Options Strategies to employ to achieve the primary objective of current income. By strategically entering and exiting options positions, the Sub-Adviser seeks to enhance the Fund's income potential.

Treasuries

In addition, the Fund will hold cash or short-term U.S. Treasury securities. These securities serve a dual purpose: providing collateral for the Options Strategies and contributing to the Fund's income generation.

Why invest in the Fund?

- The Fund seeks to generate income, which is not dependent on the value of the Underlying Securities.
- The Fund seeks to participate in some of the potential gains experienced by increases in the share prices of the Underlying Securities.

The Fund is classified as “non-diversified” under the 1940 Act.

Under normal circumstances, the Fund will invest at least 80% of the value of its assets, plus borrowings for investment purposes, in the equity securities of AI and Technology Companies and in options contracts on AI and Technology Companies and on AI and Technology ETFs. For purposes of the foregoing, the Fund defines an “AI and Technology Company” as a company that derives 50% or more of its revenue in one or more of the following proprietary sectors: (i) AI software and/or generative AI software, (ii) cloud infrastructure services (e.g., services that provide infrastructure-as-a-service to support the training of AI models), (iii) AI semiconductors (e.g., designing and manufacturing of key semiconductors for AI applications), (iv) network infrastructure (e.g., development of servers, storage, and networking equipment relevant for training and running generative AI models), (v) AI services (e.g., consulting and implementation services for generative AI software), (vi) software and information technology services companies, (vii) manufacturers and distributors of technology hardware and equipment (e.g., communications equipment, cellular phones, computers and peripherals, electronic equipment and related instruments), (viii) semiconductors and semiconductor equipment, (ix) interactive media and services, and (x) diversified consumer services, broadline retail, and entertainment companies involved in the foregoing. The Fund defines an “AI and Technology ETF” as a passively managed U.S.-listed ETF that seeks to track the performance of an AI or Technology Index. Lastly, the Fund defines an “AI or Technology Index” as a benchmark that tracks the performance of a selection of stocks from companies operating in the artificial intelligence and/or technology sectors.

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

Artificial Intelligence Risk. Issuers engaged in artificial intelligence typically have high research and capital expenditures and, as a result, their profitability can vary widely, if they are profitable at all. The space in which they are engaged is highly competitive and issuers' products and services may become obsolete very quickly. These companies are heavily dependent on intellectual property rights and may be adversely affected by loss or impairment of those rights. The issuers are also subject to legal, regulatory and political changes that may have a large impact on their profitability. A failure in an issuer's product or even questions about the safety of the product could be devastating to the issuer, especially if it is the marquee product of the issuer. It can be difficult to accurately capture what qualifies as an artificial intelligence company.

Technology Sector Risk. The Fund will invest substantially in companies in the information technology sector, and therefore the performance of the Fund could be negatively impacted by events affecting this sector. Market or economic factors impacting technology companies and companies that rely heavily on technological advances could have a significant effect on the value of the Fund's investments. The value of stocks of information technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be

more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. The Fund may also write call and put options, which includes the risk that the underlying instrument appreciates or depreciates sufficiently over the period to offset the net premium received by the Fund for the written option, resulting in a loss to the Fund. Additionally, to the extent the Fund maintains indirect exposure to an Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Distribution Risk. As part of the Fund's investment objective to provide current income, the Fund seeks to provide monthly income distributions. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date (i.e., the date by which you need to own a dividend-paying stock in order to receive the

upcoming dividend payment). The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Equity Market Risk. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from specific issuers. The equity securities held in the Fund's portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, or sectors in which the Fund invests. Common stocks, such as those held by the Fund, are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.

Concentration Risk. The Fund will be concentrated in securities of companies with principal business activities in the industry, if any, assigned to AI and Technology Companies. To the extent that the Fund concentrates in a group of industries, it will be subject to the risk that economic, political, or other conditions that have a negative effect on that group of industries will negatively impact them to a greater extent than if its assets were invested in a wider variety of industries.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Buying or selling Shares involves certain costs, including brokerage commissions, other charges imposed by brokers, and bid-ask spreads. The bid-ask spread represents the difference between the price at which an investor is willing to buy Shares and the price at which an investor is willing to sell Shares. The spread varies over time based on the Shares' trading volume and market liquidity. The spread is generally lower if Shares have more trading volume and market liquidity and higher if Shares have little trading volume and market liquidity. Due to the costs of buying or selling Shares, frequent trading of Shares may reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

Foreign Securities Risk. Investments in securities or other instruments of non-U.S. issuers involve certain risks not involved in domestic investments and may experience more rapid and extreme changes in value than investments in securities of U.S. companies. In addition, the Fund will be subject to risks associated with adverse political and economic developments in foreign countries, which may include the imposition of economic sanctions. Generally, there is less readily available and reliable information about non-U.S. issuers due to less rigorous disclosure or accounting standards and regulatory practices.

Emerging Markets Risk. The Fund may invest in securities issued by companies domiciled or headquartered in emerging market nations. Investments in securities traded in developing or emerging markets, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, currency, or regulatory conditions not associated with investments in U.S. securities and investments in more developed international markets. Such conditions may impact the ability of the Fund to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Fund Shares and cause the Fund to decline in value. It may also be more difficult to enforce contractual or shareholder rights in emerging market countries, which could negatively impact the Fund's investments.

Depository Receipt Risk. Depository receipts involve risks similar to those associated with investments in foreign securities and certain additional risks. Depository receipts listed on U.S. exchanges are issued by banks or trust companies and entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares ("Underlying Shares"). When the Fund invests in depository receipts as a substitute for an investment directly in the Underlying Shares, the Fund is exposed to the risk that the depository receipts may not provide a return that corresponds precisely with that of the Underlying Shares. The Fund may invest in unsponsored depository receipts. The issuers of unsponsored depository receipts are not obligated to disclose material information in the United States and, therefore, there may be less information available regarding such issuers and there may not be a correlation between such information and the value of the depository receipts.

Foreign Currency Risk. A Fund's exposure to foreign currencies subjects the Fund to the risk that those currencies will decline in value relative to the U.S. Dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for any number of reasons, including changes in interest rates and the imposition of currency controls or other political developments in the U.S. or abroad.

General Market Risk. Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. Securities in the Fund's portfolio may underperform in comparison to securities in the general financial markets, a particular financial market, or other asset classes, due to a number of factors, including inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters or events, pandemic diseases, terrorism, regulatory events, and government controls.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Market Capitalization Risk.

- *Large-Capitalization Investing.* The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.
- *Mid-Capitalization Investing.* The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large-capitalization companies. The securities of mid-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large-capitalization stocks or the stock market as a whole.
- *Small-Capitalization Investing.* The securities of small-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large- or mid-capitalization companies. The securities of small-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large- or mid-capitalization stocks or the stock market as a whole. Some small capitalization companies have limited product lines, markets, financial resources, and management personnel and tend to concentrate on fewer geographical markets relative to mid- and large-capitalization companies. There is typically less publicly available information concerning smaller-capitalization companies than for larger, more established companies.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation (or expectations of inflation), deflation (or expectations of deflation), changes in the actual or perceived creditworthiness of issuers, general market liquidity, regulatory events, other governmental trade or market control programs and related geopolitical events. In addition, the value of the Fund's investments may be negatively affected by the occurrence of global events such as war, terrorism, environmental disasters, natural disasters or events, country instability, and infectious disease epidemics or pandemics. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund, Adviser, and Sub-Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Investment Sub-Adviser: ZEGA Financial, LLC (the “Sub-Adviser”) serves as the investment sub-adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

When available, information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

SUMMARY INFORMATION

YieldMax™ Crypto Industry & Tech Portfolio Option Income ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income. The Fund's secondary objective is to seek capital appreciation via investments in a select portfolio of Crypto Industry and Technology Companies (defined below).

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	0.99%

⁽¹⁾ The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), and litigation expenses and other non-routine or extraordinary expenses.

⁽²⁾ Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks income and capital appreciation. The Fund's strategy involves: (1) constructing a portfolio of U.S.-listed equity securities of Crypto Industry and Technology Companies (each, an "Underlying Security") (the "Equity Strategy") and (2) generating income through an options portfolio (the "Options Strategies"), which involve using options contracts on Underlying Securities and/or Crypto Industry and Technology ETFs (described below). The Fund will also maintain a minor allocation to cash or U.S. Treasuries, not exceeding ten percent of its total assets.

The Fund does not invest directly in any digital assets (like bitcoin). The Fund does not invest directly in derivatives that track the performance of any digital assets. The Fund does not invest in or seek direct exposure to the current "spot" or cash price of any digital assets. Investors seeking direct exposure to the price of a digital asset should consider an investment other than the Fund.

Equity Strategy

The Fund's investment sub-adviser, ZEGA Financial, LLC ("ZEGA" or the "Sub-Adviser"), selects the Crypto Industry and Technology Companies in which the Fund will invest. Crypto Industry and Technology Companies are companies engaged in crypto asset mining, blockchain technology development, crypto asset trading platforms, digital wallet services, decentralized finance (DeFi) platforms, smart contract technology, crypto asset hardware manufacturing, blockchain-as-a-service (BaaS), NFT-related platforms and services, and diversified financial services, payment processing, and technology providers within the crypto industry. To enable the Fund to effectively implement its Options Strategies, ZEGA evaluates the liquidity of a potential company's common stock and the liquidity of its options contracts. The Fund may invest in companies of any market capitalization size. ZEGA will also evaluate price level and implied volatility (i.e., a measure of how much the market believes the price of a stock or other underlying asset will move in the future) when selecting companies for investment and will monitor for these factors when determining whether to select new companies or remove existing companies from the portfolio.

Crypto Industry and Technology Companies may include companies from foreign countries, including emerging markets. Underlying Securities may include depositary receipts, such as American Depositary Receipts ("ADRs") and Global Depositary Receipts ("GDRs"). The Fund will concentrate its investments (i.e., hold 25% or more of its total assets) in securities of companies with principal business activities in the industry, if any, assigned to Crypto Industry and Technology Companies.

The Fund's equity portfolio will generally be comprised of between fifteen and thirty companies. Dividends, if any, paid by the Fund's equity portfolio holdings will contribute to the Fund's income generation. In addition, the Fund's equity portfolio may provide capital appreciation. The Fund's strategy may result in high portfolio turnover on an annual basis.

Options Strategies

The Fund seeks to generate income from engaging in the Options Strategies primarily using options contracts on some or all of its Underlying Securities. In particular, the Fund will receive income in the form of a premium when it writes (sells) an option. By selling options, the Fund will earn premiums from buyers who pay for the right to buy or sell the underlying asset at a predetermined price. The Sub-Adviser can implement the Options Strategies in various market conditions. Depending on the Sub-Adviser's outlook, ZEGA will select one Options Strategy or a combination of Options Strategies that it believes will best provide the Fund with current income while generally also attempting to capture some upside appreciation (potential for increase in asset value). Additionally, the Sub-Adviser considers the performance of the underlying securities. In some instances, the aim is to generate additional gains if the underlying security increases in value, while, in other cases, the aim is to limit losses if the underlying security decreases in value. Further, depending on the Sub-Adviser's assessment of one or more of the Underlying Securities' options contracts (e.g., they are insufficiently liquid or too costly), the Fund may employ Options Strategies using options on an "Crypto Industry and Technology ETF" (i.e., a passively-managed, U.S.-listed ETF that seeks to track the performance of an Crypto Industry and Technology Index (described below)). The Fund's use of Options Strategies with Underlying Securities or ETFs will always be covered (e.g., the Fund may do call or put spreads).

The Fund may be subject to different outcomes depending on the Options Strategies used. For example:

- When writing a **covered call** (selling a call option on security the Fund already owns), the Fund might limit its potential for capital appreciation in exchange for premium income, which also provides some downside protection should the Underlying Security decline in value.
- When selling a **credit spread** (writing a call option at one strike price and buying another call option at a higher strike price or writing a put option at one strike price and buying another put option at a lower strike price), the Fund might limit the potential loss compared to selling an option outright, by capping it at the difference between the strike prices minus the net premium received. In a best case scenario, the options expire worthless and the Fund retains the premium on the written option.
- When selling a **diagonal call spread** (selling a call option with a nearer expiration date and buying a call option with a later expiration date at a different strike price), the Fund might benefit from the time decay (i.e., the reduction in an option's value as the time to its expiration date approaches) of the nearer-term option. An option's decay accelerates as its expiration date gets closer because there is less time for an investor to earn a profit from that option; however, there is no guarantee that the written option will expire worthless.
- Using an Options Strategy such as **cash-secured put selling** (selling put options while holding enough cash to purchase the underlying security if assigned), the Fund can potentially buy securities at lower prices should the Underlying Security decline in value due to the premium received, or retain the premium if the Underlying Security remains the same or increases in value.
- When selling **calendar call spreads** (selling a short-term option and buying a longer-term option at the same strike price), the Fund might benefit from the faster time decay of the short-term option. However, if the written option is exercised, the loss is offset by the premium received as well as the increase in value of the longer-term option.
- When selling **collars** (selling a call option and buying a put option to protect against significant price movements), the Fund might be able to generate income from the premium received while limiting potential losses. In a best case scenario, the security's share price falls below the put strike price, and the Fund gains the difference between the security's share price and

strike price. Otherwise, the Fund will experience losses that will be partially offset by the premium received on the written option.

These Options Strategies impact the risk-return profile of the Fund, potentially affecting volatility, income generation, upside capture (gain potential), and capital preservation (protecting value).

Additionally, the premiums the Fund receives from selling options are directly influenced by market volatility; higher volatility (larger price swings) typically results in higher premiums. Therefore, the Sub-Adviser analyzes market conditions to determine the timing and type of Options Strategies to employ to achieve the primary objective of current income. By strategically entering and exiting options positions, the Sub-Adviser seeks to enhance the Fund's income potential.

Treasuries

In addition, the Fund will hold cash or short-term U.S. Treasury securities. These securities serve a dual purpose: providing collateral for the Options Strategies and contributing to the Fund's income generation.

Why invest in the Fund?

- The Fund seeks to generate income, which is not dependent on the value of the Underlying Securities.
- The Fund seeks to participate in some of the potential gains experienced by increases in the share prices of the Underlying Securities.

The Fund is classified as “non-diversified” under the 1940 Act.

Under normal circumstances, the Fund will invest at least 80% of the value of its assets, plus borrowings for investment purposes, in the equity securities of Crypto Industry and Technology Companies and in options contracts on Crypto Industry and Technology Companies and on Crypto Industry and Technology ETFs. For purposes of the foregoing, the Fund defines a “Crypto Industry and Technology Company” as a company that derives 50% or more of its revenue in one or more of the following proprietary sectors: (i) crypto asset mining, (ii) blockchain technology development (e.g., companies providing infrastructure and tools for blockchain networks), (iii) crypto asset trading platforms, (iv) digital wallet providers, (v) decentralized finance (DeFi) platforms, (vi) companies involved in the development of smart contract technology, (vii) manufacturers and distributors of hardware related to crypto asset (e.g., mining rigs, hardware wallets, and other related equipment), (viii) companies providing blockchain-as-a-service (BaaS), (ix) interactive platforms and services related to NFTs (non-fungible tokens), and (x) diversified financial services, payment processing companies, and technology providers involved in the foregoing. The Fund defines a “Crypto Industry and Technology ETF” as a passively managed U.S.-listed ETF that seeks to track the performance of a Crypto Industry or Technology Index. Lastly, the Fund defines a “Crypto Industry or Technology Index” as a benchmark that tracks the performance of a selection of stocks from companies operating in the Crypto Industry and/or technology sectors.

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

Crypto Industry Risk. Investing in the Crypto Industry involves substantial risks, including but not limited to market volatility, regulatory changes, technological obsolescence, and security vulnerabilities. Crypto Industry companies typically face significant volatility due to the nascent and rapidly evolving nature of the sector. High research and capital expenditures are common, which can result in substantial variability in profitability, or even sustained losses. The industry is intensely competitive, with technological advancements occurring at a rapid pace, potentially rendering existing products or services obsolete. These companies are heavily reliant on digital and intellectual property, including proprietary blockchain technology and cryptographic algorithms, and may be adversely affected by the loss, theft, or impairment of these assets. Furthermore, the Crypto Industry is subject to a complex and constantly changing legal, regulatory, and political landscape, which can have a substantial impact on the profitability and viability of companies

within the sector. Regulatory actions or unfavorable legal rulings could significantly hinder operations or market access. Additionally, security breaches, hacking incidents, or failures in the underlying technology of a crypto asset or blockchain could have devastating effects on the issuer, particularly if the compromised asset or technology is central to the issuer's business model. The Crypto Industry has been, and may continue to be, dependent on speculation. The identification and classification of Crypto Industry companies can be challenging, as the boundaries of the industry are often unclear and subject to interpretation.

- o *Blockchain Risk.* Companies involved in the crypto asset industry are subject to the risks associated with blockchain technology, the occurrence of which could negatively impact the value of such companies. These risks include (i) the risk that the integrity and viability of the consensus mechanism of the blockchain fails; (ii) the risk that the blockchain's capacity to execute and settle transactions in a timely and predictable manner is compromised; (iii) the open source nature of blockchain technology which makes it vulnerable to being "forked" by users and miners/validators (i.e., creation of a new competing blockchain when a significant portion of the miners/validators adopts updates to the existing blockchain protocol); and (iv) development of so-called Layer 2 networks, including the "Lightning Network," which are separate blockchains built on top of "Layer 1" blockchains, like the Bitcoin Blockchain, for the purpose of augmenting the throughput of the Layer 1 blockchain. Layer 2 blockchains are a relatively new and still developing technology and include certain risks, such as the potential for hacks, bugs or failures.
- o *Crypto Asset Trading Platform Risk.* Companies involved in the crypto asset industry are subject to the risks associated with crypto asset trading platforms. Crypto asset trading platforms and other trading venues on which crypto assets trade are relatively new and, in most cases, largely unregulated and may therefore be more exposed to market manipulation, fraud and failure than established, regulated exchanges for securities, derivatives and other currencies. Crypto asset trading platforms may (and in certain cases have) become subject to enforcement actions by regulatory authorities.

Technology Sector Risk. The Fund will invest substantially in companies in the information technology sector, and therefore the performance of the Fund could be negatively impacted by events affecting this sector. Market or economic factors impacting technology companies and companies that rely heavily on technological advances could have a significant effect on the value of the Fund's investments. The value of stocks of information technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. The Fund may also write call and put options, which includes the risk that the underlying instrument appreciates or depreciates sufficiently over the period to offset the net premium received by the Fund for the written option, resulting in a loss to the Fund. Additionally, to the extent the Fund maintains indirect exposure to an Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as "rolling." If the expiring options

contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared (“cleared derivatives”). In a transaction involving cleared derivatives, the Fund’s counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house (“clearing members”) can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member’s individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund’s clearing member. In addition, although clearing members guarantee performance of their clients’ obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member’s bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member’s customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund’s behalf, which heightens the risks associated with a clearing member’s default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund’s behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund’s behalf, the Fund may be unable to effectively implement its investment strategy.

Distribution Risk. As part of the Fund’s investment objective to provide current income, the Fund seeks to provide monthly income distributions. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund’s NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund’s NAV will typically drop by the amount of the distribution on the related ex-dividend date (i.e., the date by which you need to own a dividend-paying stock in order to receive the upcoming dividend payment). The repeated payment of distributions by the Fund, if any, may significantly erode the Fund’s NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Equity Market Risk. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from specific issuers. The equity securities held in the Fund’s portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, or sectors in which the Fund invests. Common stocks, such as those held by the Fund, are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.

Concentration Risk. The Fund will be concentrated in securities of companies with principal business activities in the industry, if any, assigned to Crypto Industry and Technology Companies. To the extent that the Fund concentrates in a group of industries, it will be subject to the risk that economic, political, or other conditions that have a negative effect on that group of industries will negatively impact them to a greater extent than if its assets were invested in a wider variety of industries.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as “Authorized Participants” or “APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund’s investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected

to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Buying or selling Shares involves certain costs, including brokerage commissions, other charges imposed by brokers, and bid-ask spreads. The bid-ask spread represents the difference between the price at which an investor is willing to buy Shares and the price at which an investor is willing to sell Shares. The spread varies over time based on the Shares' trading volume and market liquidity. The spread is generally lower if Shares have more trading volume and market liquidity and higher if Shares have little trading volume and market liquidity. Due to the costs of buying or selling Shares, frequent trading of Shares may reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

Foreign Securities Risk. Investments in securities or other instruments of non-U.S. issuers involve certain risks not involved in domestic investments and may experience more rapid and extreme changes in value than investments in securities of U.S. companies. In addition, the Fund will be subject to risks associated with adverse political and economic developments in foreign countries, which may include the imposition of economic sanctions. Generally, there is less readily available and reliable information about non-U.S. issuers due to less rigorous disclosure or accounting standards and regulatory practices.

Emerging Markets Risk. The Fund may invest in securities issued by companies domiciled or headquartered in emerging market nations. Investments in securities traded in developing or emerging markets, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, currency, or regulatory conditions not associated with investments in U.S. securities and investments in more developed international markets. Such conditions may impact the ability of the Fund to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Fund Shares and cause the Fund to decline in value. It may also be more difficult to enforce contractual or shareholder rights in emerging market countries, which could negatively impact the Fund's investments.

Depository Receipt Risk. Depository receipts involve risks similar to those associated with investments in foreign securities and certain additional risks. Depository receipts listed on U.S. exchanges are issued by banks or trust companies and entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares ("Underlying Shares"). When the Fund invests in depository receipts as a substitute for an investment directly in the Underlying Shares, the Fund is exposed to the risk that the depository receipts may not provide a return that corresponds precisely with that of the Underlying Shares. The Fund may invest in unsponsored depository receipts. The issuers of unsponsored depository receipts are not obligated to disclose material information in the United States and, therefore, there may be less information available regarding such issuers and there may not be a correlation between such information and the value of the depository receipts.

Foreign Currency Risk. A Fund's exposure to foreign currencies subjects the Fund to the risk that those currencies will decline in value relative to the U.S. Dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for any number of reasons, including changes in interest rates and the imposition of currency controls or other political developments in the U.S. or abroad.

General Market Risk. Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. Securities in the Fund's portfolio may underperform in comparison to securities in the general financial markets, a particular

financial market, or other asset classes, due to a number of factors, including inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters or events, pandemic diseases, terrorism, regulatory events, and government controls.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Market Capitalization Risk.

- *Large-Capitalization Investing.* The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.
- *Mid-Capitalization Investing.* The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large-capitalization companies. The securities of mid-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large-capitalization stocks or the stock market as a whole.
- *Small-Capitalization Investing.* The securities of small-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large- or mid-capitalization companies. The securities of small-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large- or mid-capitalization stocks or the stock market as a whole. Some small capitalization companies have limited product lines, markets, financial resources, and management personnel and tend to concentrate on fewer geographical markets relative to mid- and large-capitalization companies. There is typically less publicly available information concerning smaller-capitalization companies than for larger, more established companies.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation (or expectations of inflation), deflation (or expectations of deflation), changes in the actual or perceived creditworthiness of issuers, general market liquidity, regulatory events, other governmental trade or market control programs and related geopolitical events. In addition, the value of the Fund's investments may be negatively affected by the occurrence of global events such as war, terrorism, environmental disasters, natural disasters or events, country instability, and infectious disease epidemics or pandemics. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or

failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund, Adviser, and Sub-Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Investment Sub-Adviser: ZEGA Financial, LLC (the "Sub-Adviser") serves as the investment sub-adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

When available, information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

SUMMARY INFORMATION

YieldMax™ China Portfolio Option Income ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income. The Fund's secondary objective is to seek capital appreciation via investments in a select portfolio of Greater China Companies (defined below).

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	0.99%

⁽¹⁾ The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), and litigation expenses and other non-routine or extraordinary expenses.

⁽²⁾ Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks income and capital appreciation. The Fund's strategy involves: (1) constructing a portfolio of U.S.-listed equity securities of Greater China Companies (each, an "Underlying Security") (the "Equity Strategy") and (2) generating income through an options portfolio (the "Options Strategies"), which involve using options contracts on Underlying Securities and/or Greater China ETFs (described below). The Fund will also maintain a minor allocation to cash or U.S. Treasuries, not exceeding ten percent of its total assets.

Equity Strategy

The Fund's investment sub-adviser, ZEGA Financial, LLC ("ZEGA" or the "Sub-Adviser"), selects the Greater China Companies for the Fund's investments. Greater China Companies are companies either incorporated or headquartered in China, Taiwan or Hong Kong. The Fund will generally invest in these companies through depositary receipts, such as American Depositary Receipts ("ADRs") and Global Depositary Receipts ("GDRs"), but may also hold common stock or other forms of equity ownership. To enable the Fund to effectively implement its Options Strategies, ZEGA evaluates the liquidity of a potential company's depositary receipts (e.g., ADR or

GDR) or other equity ownership, and the liquidity of its options contracts. The Fund may invest in companies of any market capitalization size. ZEGA will also evaluate price level and implied volatility (i.e., a measure of how much the market believes the price of a stock or other underlying asset will move in the future) when selecting companies for investment and will monitor for these factors when determining whether to select new companies or remove existing companies from the portfolio.

The Fund's equity portfolio will generally be comprised of between fifteen and thirty companies. Dividends, if any, paid by the Fund's equity portfolio holdings will contribute to the Fund's income generation. In addition, the Fund's equity portfolio may provide capital appreciation. The Fund's strategy may result in high portfolio turnover on an annual basis.

Options Strategies

The Fund seeks to generate income from engaging in the Options Strategies primarily using options contracts on some or all of its Underlying Securities. In particular, the Fund will receive income in the form of a premium when it writes (sells) an option. By selling options, the Fund will earn premiums from buyers who pay for the right to buy or sell the underlying asset at a predetermined price. The Sub-Adviser can implement the Options Strategies in various market conditions. Depending on the Sub-Adviser's outlook, ZEGA will select one Options Strategy or a combination of Options Strategies that it believes will best provide the Fund with current income while generally also attempting to capture some upside appreciation (potential for increase in asset value). Additionally, the Sub-Adviser considers the performance of the underlying securities. In some instances, the aim is to generate additional gains if the underlying security increases in value, while, in other cases, the aim is to limit losses if the underlying security decreases in value. Further, depending on the Sub-Adviser's assessment of one or more of the Underlying Securities' options contracts (e.g., they are insufficiently liquid or too costly), the Fund may employ Options Strategies using options on a "Greater China ETF" (i.e., a passively-managed, U.S.-listed ETF that seeks to track the performance of a Greater China Index (described below)). The Fund's use of Options Strategies with Underlying Securities or ETFs will always be covered (e.g., the Fund may do call or put spreads).

The Fund may be subject to different outcomes depending on the Options Strategies used. For example:

- When writing a **covered call** (selling a call option on security the Fund already owns), the Fund might limit its potential for capital appreciation in exchange for premium income, which also provides some downside protection should the Underlying Security decline in value.
- When selling a **credit spread** (writing a call option at one strike price and buying another call option at a higher strike price or writing a put option at one strike price and buying another put option at a lower strike price), the Fund might limit the potential loss compared to selling an option outright, by capping it at the difference between the strike prices minus the net premium received. In a best case scenario, the options expire worthless and the Fund retains the premium on the written option.
- When selling a **diagonal call spread** (selling a call option with a nearer expiration date and buying a call option with a later expiration date at a different strike price), the Fund might benefit from the time decay (i.e., the reduction in an option's value as the time to its expiration date approaches) of the nearer-term option. An option's decay accelerates as its expiration date gets closer because there is less time for an investor to earn a profit from that option; however, there is no guarantee that the written option will expire worthless.
- Using an Options Strategy such as **cash-secured put selling** (selling put options while holding enough cash to purchase the underlying security if assigned), the Fund can potentially buy securities at lower prices should the Underlying Security decline in value due to the premium received, or retain the premium if the Underlying Security remains the same or increases in value.
- When selling **calendar call spreads** (selling a short-term option and buying a longer-term option at the same strike price), the Fund might benefit from the faster time decay of the short-term option. However, if the written option is exercised, the loss is offset by the premium received as well as the increase in value of the longer-term option.
- When selling **collars** (selling a call option and buying a put option to protect against significant price movements), the Fund might be able to generate income from the premium received while limiting potential losses. In a best case scenario, the security's share price falls below the put strike price, and the Fund gains the difference between the security's share price and strike price. Otherwise, the Fund will experience losses that will be partially offset by the premium received on the written option.

These Options Strategies impact the risk-return profile of the Fund, potentially affecting volatility, income generation, upside capture (gain potential), and capital preservation (protecting value).

Additionally, the premiums the Fund receives from selling options are directly influenced by market volatility; higher volatility (larger price swings) typically results in higher premiums. Therefore, the Sub-Adviser analyzes market conditions to determine the timing and type of Options Strategies to employ to achieve the primary objective of current income. By strategically entering and exiting options positions, the Sub-Adviser seeks to enhance the Fund's income potential.

Treasuries

In addition, the Fund will hold cash or short-term U.S. Treasury securities. These securities serve a dual purpose: providing collateral for the Options Strategies and contributing to the Fund's income generation.

Why invest in the Fund?

- The Fund seeks to generate income, which is not dependent on the value of the Underlying Securities.
- The Fund seeks to participate in some of the potential gains experienced by increases in the share prices of the Underlying Securities.

The Fund is classified as “non-diversified” under the 1940 Act.

Under normal circumstances, the Fund will invest at least 80% of the value of its assets, plus borrowings for investment purposes, in the equity securities of Greater China Companies, and in options contracts on Greater China Companies and on Greater China ETFs. For purposes of the foregoing, the Fund defines a “Greater China Company” as a company that is either incorporated or headquartered in China, Taiwan or Hong Kong. The Fund defines a “Greater China ETF” as a passively managed U.S.-listed ETF that seeks to track the performance of a Greater China Index. Lastly, the Fund defines a “Greater China Index” as a benchmark that tracks the performance of a selection of Greater China Companies.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

Greater China Investing Risk. Investing in ADRs, GDRs, and other types of depositary receipts with underlying shares organized, listed, or domiciled in China, Hong Kong, and Taiwan involves unique and significant risks. These risks include the potential for nationalization, expropriation, or confiscatory taxation; substantial social, economic, and political uncertainties; dependency on exports and international trade; higher inflation rates; and extensive governmental control over the economy. Additionally, China’s economic structure, regulatory environment, and financial reporting standards differ markedly from those in more established markets, presenting challenges such as unreliable statistical data and the limited ability of the Public Company Accounting Oversight Board (“PCAOB”) to inspect audit work in China and Hong Kong. The close economic ties between China and Hong Kong mean that economic downturns or political instability in China could have a direct negative impact on Hong Kong’s economy and financial markets. Political risks, especially those related to China’s influence over Hong Kong and ongoing tensions with Taiwan, could further disrupt markets and undermine investor confidence. The potential end of the Hong Kong dollar’s peg to the U.S. dollar could also introduce currency risk, potentially affecting the Fund’s NAV. Additionally, Taiwan’s economy, which is heavily reliant on exports, faces vulnerabilities due to its dependence on global trade and the economies of key trading partners like the U.S., China, and Japan. These factors, along with the potential for underdeveloped financial reporting practices, public health crises, and geopolitical tensions, could severely impact the Fund’s performance.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund’s investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund’s other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund’s investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular,

the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. The Fund may also write call and put options, which includes the risk that the underlying instrument appreciates or depreciates sufficiently over the period to offset the net premium received by the Fund for the written option, resulting in a loss to the Fund. Additionally, to the extent the Fund maintains indirect exposure to an Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as “rolling.” If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared (“cleared derivatives”). In a transaction involving cleared derivatives, the Fund’s counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house (“clearing members”) can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member’s individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund’s clearing member. In addition, although clearing members guarantee performance of their clients’ obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member’s bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member’s customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund’s behalf, which heightens the risks associated with a clearing member’s default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund’s behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund’s behalf, the Fund may be unable to effectively implement its investment strategy.

Distribution Risk. As part of the Fund’s investment objective to provide current income, the Fund seeks to provide monthly income distributions. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund’s NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund’s NAV will typically drop by the amount of the distribution on the related ex-dividend date (i.e., the date by which you need to own a dividend-paying stock in order to receive the upcoming dividend payment). The repeated payment of distributions by the Fund, if any, may significantly erode the Fund’s NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Equity Market Risk. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from specific issuers. The equity securities held in the Fund’s portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, or sectors in which the Fund invests. Common stocks, such as those held by the Fund, are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as “Authorized Participants” or “APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Buying or selling Shares involves certain costs, including brokerage commissions, other charges imposed by brokers, and bid-ask spreads. The bid-ask spread represents the difference between the price at which an investor is willing to buy Shares and the price at which an investor is willing to sell Shares. The spread varies over time based on the Shares' trading volume and market liquidity. The spread is generally lower if Shares have more trading volume and market liquidity and higher if Shares have little trading volume and market liquidity. Due to the costs of buying or selling Shares, frequent trading of Shares may reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

Foreign Securities Risk. Investments in securities or other instruments of non-U.S. issuers involve certain risks not involved in domestic investments and may experience more rapid and extreme changes in value than investments in securities of U.S. companies. In addition, the Fund will be subject to risks associated with adverse political and economic developments in foreign countries, which may include the imposition of economic sanctions. Generally, there is less readily available and reliable information about non-U.S. issuers due to less rigorous disclosure or accounting standards and regulatory practices.

Emerging Markets Risk. The Fund may invest in securities issued by companies domiciled or headquartered in emerging market nations. Investments in securities traded in developing or emerging markets, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, currency, or regulatory conditions not associated with investments in U.S. securities and investments in more developed international markets. Such conditions may impact the ability of the Fund to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Fund Shares and cause the Fund to decline in value. It may also be more difficult to enforce contractual or shareholder rights in emerging market countries, which could negatively impact the Fund's investments.

Depository Receipt Risk. Depository receipts involve risks similar to those associated with investments in foreign securities and certain additional risks. Depository receipts listed on U.S. exchanges are issued by banks or trust companies and entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares ("Underlying Shares"). When the Fund invests in depository receipts as a substitute for an investment directly in the Underlying Shares, the Fund is exposed to the risk that the depository receipts may not provide a return that corresponds precisely with that of the Underlying Shares. The Fund may invest in unsponsored depository receipts. The issuers of unsponsored depository receipts are not obligated to disclose material information in the United States and, therefore, there may be less information available regarding such issuers and there may not be a correlation between such information and the value of the depository receipts. In addition, Chinese ADRs are subject to the risk of being delisted from U.S. exchanges if U.S. regulatory authorities are unable to review audited financial statements on a regular basis. The delisting of Chinese ADRs could significantly impact the value of the Fund and impair the Fund's ability to achieve its investment objective.

Foreign Currency Risk. A Fund's exposure to foreign currencies subjects the Fund to the risk that those currencies will decline in value relative to the U.S. Dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for any number of reasons, including changes in interest rates and the imposition of currency controls or other political developments in the U.S. or abroad.

General Market Risk. Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. Securities in the Fund's portfolio may underperform in comparison to securities in the general financial markets, a particular financial market, or other asset classes, due to a number of factors, including inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters or events, pandemic diseases, terrorism, regulatory events, and government controls.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Market Capitalization Risk.

- *Large-Capitalization Investing.* The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.
- *Mid-Capitalization Investing.* The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large-capitalization companies. The securities of mid-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large-capitalization stocks or the stock market as a whole.
- *Small-Capitalization Investing.* The securities of small-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large- or mid-capitalization companies. The securities of small-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large- or mid-capitalization stocks or the stock market as a whole. Some small capitalization companies have limited product lines, markets, financial resources, and management personnel and tend to concentrate on fewer geographical markets relative to mid- and large-capitalization companies. There is typically less publicly available information concerning smaller-capitalization companies than for larger, more established companies.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation (or expectations of inflation), deflation (or expectations of deflation), changes in the actual or perceived creditworthiness of issuers, general market liquidity, regulatory events, other governmental trade or market control programs and related geopolitical events. In addition, the value of the Fund's investments may be negatively affected by the occurrence of global events such as war, terrorism, environmental disasters, natural disasters or events, country instability, and infectious disease epidemics or pandemics. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund’s overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund’s ability to meet its investment objective. Although the Fund, Adviser, and Sub-Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund’s taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund’s performance history from year to year and showing how the Fund’s average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund’s website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the “Adviser”) serves as investment adviser to the Fund.

Investment Sub-Adviser: ZEGA Financial, LLC (the “Sub-Adviser”) serves as the investment sub-adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrichelli, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

When available, information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

SUMMARY INFORMATION

YieldMax™ Semiconductor Portfolio Option Income ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income. The Fund's secondary objective is to seek capital appreciation via investments in a select portfolio of Semiconductor Companies (defined below).

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	0.99%

⁽¹⁾ The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), and litigation expenses and other non-routine or extraordinary expenses.

⁽²⁾ Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks income and capital appreciation. The Fund's strategy involves: (1) constructing a portfolio of U.S.-listed equity securities of Semiconductor Companies (each, an "Underlying Security") (the "Equity Strategy") and (2) generating income through an options portfolio (the "Options Strategies"), which involve using options contracts on Underlying Securities and/or Semiconductor ETFs (described below). The Fund will also maintain a minor allocation to cash or U.S. Treasuries, not exceeding ten percent of its total assets.

Equity Strategy

The Fund's investment sub-adviser, ZEGA Financial, LLC ("ZEGA" or the "Sub-Adviser"), selects the Semiconductor Companies in which the Fund will invest. Semiconductor Companies are companies that are involved in the design, manufacture, or sale of semiconductors or semiconductor equipment. To enable the Fund to effectively implement its Options Strategies, ZEGA evaluates the liquidity of a potential company's common stock and the liquidity of its options contracts. The Fund may invest in companies of any

market capitalization size. ZEGA will also evaluate price level and implied volatility (i.e., a measure of how much the market believes the price of a stock or other underlying asset will move in the future) when selecting companies for investment and will monitor for these factors when determining whether to select new companies or remove existing companies from the portfolio.

Semiconductor Companies may include companies from foreign countries, including emerging markets. Underlying Securities may include depositary receipts, such as American Depositary Receipts (“ADRs”) and Global Depositary Receipts (“GDRs”). The Fund will concentrate its investments (i.e., hold 25% or more of its total assets) in the same industry as that of the Semiconductor Companies, which subjects the Fund to specific industry-related risks.

The Fund’s equity portfolio will generally be comprised of between fifteen and thirty companies. Dividends, if any, paid by the Fund’s equity portfolio holdings will contribute to the Fund’s income generation. In addition, the Fund’s equity portfolio may provide capital appreciation. The Fund’s strategy may result in high portfolio turnover on an annual basis.

Options Strategies

The Fund seeks to generate income from engaging in the Options Strategies primarily using options contracts on some or all of its Underlying Securities. In particular, the Fund will receive income in the form of a premium when it writes (sells) an option. By selling options, the Fund will earn premiums from buyers who pay for the right to buy or sell the underlying asset at a predetermined price. The Sub-Adviser can implement the Options Strategies in various market conditions. Depending on the Sub-Adviser’s outlook, ZEGA will select one Options Strategy or a combination of Options Strategies that it believes will best provide the Fund with current income while generally also attempting to capture some upside appreciation (potential for increase in asset value). Additionally, the Sub-Adviser considers the performance of the underlying securities. In some instances, the aim is to generate additional gains if the underlying security increases in value, while, in other cases, the aim is to limit losses if the underlying security decreases in value. Further, depending on the Sub-Adviser’s assessment of one or more of the Underlying Securities’ options contracts (e.g., they are insufficiently liquid or too costly), the Fund may employ Options Strategies using options on an “Semiconductor ETF” (i.e., a passively-managed, U.S.-listed ETF that seeks to track the performance of an Semiconductor Index (described below)). The Fund’s use of Options Strategies with Underlying Securities or ETFs will always be covered (e.g., the Fund may do call or put spreads).

The Fund may be subject to different outcomes depending on the Options Strategies used. For example:

- When writing a **covered call** (selling a call option on security the Fund already owns), the Fund might limit its potential for capital appreciation in exchange for premium income, which also provides some downside protection should the Underlying Security decline in value.
- When selling a **credit spread** (writing a call option at one strike price and buying another call option at a higher strike price or writing a put option at one strike price and buying another put option at a lower strike price), the Fund might limit the potential loss compared to selling an option outright, by capping it at the difference between the strike prices minus the net premium received. In a best case scenario, the options expire worthless and the Fund retains the premium on the written option.
- When selling a **diagonal call spread** (selling a call option with a nearer expiration date and buying a call option with a later expiration date at a different strike price), the Fund might benefit from the time decay (i.e., the reduction in an option’s value as the time to its expiration date approaches) of the nearer-term option. An option’s decay accelerates as its expiration date gets closer because there is less time for an investor to earn a profit from that option; however, there is no guarantee that the written option will expire worthless.
- Using an Options Strategy such as **cash-secured put selling** (selling put options while holding enough cash to purchase the underlying security if assigned), the Fund can potentially buy securities at lower prices should the Underlying Security decline in value due to the premium received, or retain the premium if the Underlying Security remains the same or increases in value.
- When selling **calendar call spreads** (selling a short-term option and buying a longer-term option at the same strike price), the Fund might benefit from the faster time decay of the short-term option. However, if the written option is exercised, the loss is offset by the premium received as well as the increase in value of the longer-term option.
- When selling **collars** (selling a call option and buying a put option to protect against significant price movements), the Fund might be able to generate income from the premium received while limiting potential losses. In a best case scenario, the security’s share price falls below the put strike price, and the Fund gains the difference between the security’s share price and strike price. Otherwise, the Fund will experience losses that will be partially offset by the premium received on the written option.

These Options Strategies impact the risk-return profile of the Fund, potentially affecting volatility, income generation, upside capture (gain potential), and capital preservation (protecting value).

Additionally, the premiums the Fund receives from selling options are directly influenced by market volatility; higher volatility (larger price swings) typically results in higher premiums. Therefore, the Sub-Adviser analyzes market conditions to determine the timing and type of Options Strategies to employ to achieve the primary objective of current income. By strategically entering and exiting options positions, the Sub-Adviser seeks to enhance the Fund’s income potential.

Treasuries

In addition, the Fund will hold cash or short-term U.S. Treasury securities. These securities serve a dual purpose: providing collateral for the Options Strategies and contributing to the Fund's income generation.

Why invest in the Fund?

- The Fund seeks to generate income, which is not dependent on the value of the Underlying Securities.
- The Fund seeks to participate in some of the potential gains experienced by increases in the share prices of the Underlying Securities.

The Fund is classified as “non-diversified” under the 1940 Act.

Under normal circumstances, the Fund will invest at least 80% of the value of its assets, plus borrowings for investment purposes, in the equity securities of Semiconductor Companies and in options contracts on Semiconductor Companies and on Semiconductor ETFs. For purposes of the foregoing, the Fund defines a “Semiconductor Company” as a company that generates at least 50% of its revenue from the design, manufacture, or sale of semiconductors or semiconductor equipment, and a “Semiconductor ETF” as a passively-managed, U.S.-listed ETF that seeks to track the performance of a semiconductor index. Lastly, the Fund defines a “Semiconductor Index” as a benchmark that tracks the performance of a selection of stocks from companies operating in the semiconductor industry.

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

Semiconductor Industry Risk. Semiconductor companies may face intense competition, both domestically and internationally, and such competition may have an adverse effect on their profit margins. Semiconductor companies may have limited product lines, markets, financial resources or personnel. Semiconductor companies' supply chain and operations are dependent on the availability of materials that meet exacting standards and the use of third parties to provide components and services. Semiconductor companies may rely on a limited number of suppliers, or upon suppliers in a single location, for certain materials, equipment or tools. Finding and qualifying alternate or additional suppliers can be a lengthy process that can cause production delays or impose unforeseen costs, and such alternatives may not be available at all. Production can be disrupted by the unavailability of resources, such as water, silicon, electricity, gases and other materials. Suppliers may also increase prices or encounter cybersecurity or other issues that can disrupt production or increase production costs.

The products of semiconductor companies may face obsolescence due to rapid technological developments and frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Capital equipment expenditures could be substantial, and equipment generally suffers from rapid obsolescence. Companies in the semiconductor industry are heavily dependent on patent and intellectual property rights. The loss or impairment of these rights would adversely affect the profitability of these companies.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular, the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. The Fund may also write call and put options, which includes the risk that the underlying instrument appreciates or depreciates sufficiently over the period to offset the net premium received by the Fund for the written option, resulting in a loss to the Fund. Additionally, to the extent the Fund maintains indirect exposure to an Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as “rolling.” If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared (“cleared derivatives”). In a transaction involving cleared derivatives, the Fund’s counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house (“clearing members”) can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member’s individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund’s clearing member. In addition, although clearing members guarantee performance of their clients’ obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member’s bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member’s customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund’s behalf, which heightens the risks associated with a clearing member’s default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund’s behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund’s behalf, the Fund may be unable to effectively implement its investment strategy.

Distribution Risk. As part of the Fund’s investment objective to provide current income, the Fund seeks to provide monthly income distributions. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund’s NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund’s NAV will typically drop by the amount of the distribution on the related ex-dividend date (i.e., the date by which you need to own a dividend-paying stock in order to receive the upcoming dividend payment). The repeated payment of distributions by the Fund, if any, may significantly erode the Fund’s NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Equity Market Risk. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from specific issuers. The equity securities held in the Fund’s portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, or sectors in which the Fund invests. Common stocks, such as those held by the Fund, are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.

Concentration Risk. The Fund will be concentrate its investments in the same industry as that of the Semiconductor Companies. To the extent that the Fund concentrates in a group of industries, it will be subject to the risk that economic, political, or other conditions

that have a negative effect on that group of industries will negatively impact them to a greater extent than if its assets were invested in a wider variety of industries.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as “Authorized Participants” or “APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund’s investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Buying or selling Shares involves certain costs, including brokerage commissions, other charges imposed by brokers, and bid-ask spreads. The bid-ask spread represents the difference between the price at which an investor is willing to buy Shares and the price at which an investor is willing to sell Shares. The spread varies over time based on the Shares’ trading volume and market liquidity. The spread is generally lower if Shares have more trading volume and market liquidity and higher if Shares have little trading volume and market liquidity. Due to the costs of buying or selling Shares, frequent trading of Shares may reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund’s NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange “circuit breaker” rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

Foreign Securities Risk. Investments in securities or other instruments of non-U.S. issuers involve certain risks not involved in domestic investments and may experience more rapid and extreme changes in value than investments in securities of U.S. companies. In addition, the Fund will be subject to risks associated with adverse political and economic developments in foreign countries, which may include the imposition of economic sanctions. Generally, there is less readily available and reliable information about non-U.S. issuers due to less rigorous disclosure or accounting standards and regulatory practices.

Emerging Markets Risk. The Fund may invest in securities issued by companies domiciled or headquartered in emerging market nations. Investments in securities traded in developing or emerging markets, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, currency, or regulatory conditions not associated with investments in U.S. securities and investments in more developed international markets. Such conditions may impact the ability of the Fund to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Fund Shares and cause

the Fund to decline in value. It may also be more difficult to enforce contractual or shareholder rights in emerging market countries, which could negatively impact the Fund's investments.

Depository Receipt Risk. Depository receipts involve risks similar to those associated with investments in foreign securities and certain additional risks. Depository receipts listed on U.S. exchanges are issued by banks or trust companies and entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares ("Underlying Shares"). When the Fund invests in depository receipts as a substitute for an investment directly in the Underlying Shares, the Fund is exposed to the risk that the depository receipts may not provide a return that corresponds precisely with that of the Underlying Shares. The Fund may invest in unsponsored depository receipts. The issuers of unsponsored depository receipts are not obligated to disclose material information in the United States and, therefore, there may be less information available regarding such issuers and there may not be a correlation between such information and the value of the depository receipts.

Foreign Currency Risk. A Fund's exposure to foreign currencies subjects the Fund to the risk that those currencies will decline in value relative to the U.S. Dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for any number of reasons, including changes in interest rates and the imposition of currency controls or other political developments in the U.S. or abroad.

General Market Risk. Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. Securities in the Fund's portfolio may underperform in comparison to securities in the general financial markets, a particular financial market, or other asset classes, due to a number of factors, including inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters or events, pandemic diseases, terrorism, regulatory events, and government controls.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Market Capitalization Risk.

- *Large-Capitalization Investing.* The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.
- *Mid-Capitalization Investing.* The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large-capitalization companies. The securities of mid-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large-capitalization stocks or the stock market as a whole.
- *Small-Capitalization Investing.* The securities of small-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large- or mid-capitalization companies. The securities of small-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large- or mid-capitalization stocks or the stock market as a whole. Some small capitalization companies have limited product lines, markets, financial resources, and management personnel and tend to concentrate on fewer geographical markets relative to mid- and large-capitalization companies. There is typically less publicly available information concerning smaller-capitalization companies than for larger, more established companies.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation (or expectations of inflation), deflation (or expectations of deflation), changes in the actual or perceived creditworthiness of issuers, general market liquidity, regulatory events, other governmental trade or market control programs and related geopolitical events. In addition, the value of the Fund's investments may be negatively affected by the occurrence of global events such as war, terrorism, environmental disasters, natural disasters or events, country instability, and infectious disease epidemics or pandemics. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian

individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund’s overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund’s ability to meet its investment objective. Although the Fund, Adviser, and Sub-Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund’s taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund’s performance history from year to year and showing how the Fund’s average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund’s website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the “Adviser”) serves as investment adviser to the Fund.

Investment Sub-Adviser: ZEGA Financial, LLC (the “Sub-Adviser”) serves as the investment sub-adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

When available, information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

SUMMARY INFORMATION

YieldMax™ Biotech & Pharma Portfolio Option Income ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income. The Fund's secondary objective is to seek capital appreciation via investments in a select portfolio of Biotech and Pharma Companies (defined below).

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	0.99%

⁽¹⁾ The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), and litigation expenses and other non-routine or extraordinary expenses.

⁽²⁾ Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks income and capital appreciation. The Fund's strategy involves: (1) constructing a portfolio of U.S.-listed equity securities of Biotech and Pharma Companies (each, an "Underlying Security") (the "Equity Strategy") and (2) generating income through an options portfolio (the "Options Strategies"), which involve using options contracts on Underlying Securities and/or Biotech and Pharma ETFs (described below). The Fund will also maintain a minor allocation to cash or U.S. Treasuries, not exceeding ten percent of its total assets.

Equity Strategy

The Fund's investment sub-adviser, ZEGA Financial, LLC ("ZEGA" or the "Sub-Adviser"), selects the Biotech and Pharma Companies in which the Fund will invest. Biotech and Pharma Companies are involved in the research, development, manufacturing, and commercialization of biotechnological and pharmaceutical products. To enable the Fund to effectively implement its Options Strategies, ZEGA evaluates the liquidity of a potential company's common stock and the liquidity of its options contracts. The Fund may invest in companies of any market capitalization size. ZEGA will also evaluate price level and implied volatility (i.e., a measure of

how much the market believes the price of a stock or other underlying asset will move in the future) when selecting companies for investment and will monitor for these factors when determining whether to select new companies or remove existing companies from the portfolio.

Biotech and Pharma Companies may include companies from foreign countries, including emerging markets. Underlying Securities may include depositary receipts, such as American Depositary Receipts (“ADRs”) and Global Depositary Receipts (“GDRs”). The Fund will concentrate its investments (i.e., hold 25% or more of its total assets) in the same industry group as that of the Biotech and Pharma Companies, which subjects the Fund to specific industry-related risks.

The Fund’s equity portfolio will generally be comprised of between fifteen and thirty companies. Dividends, if any, paid by the Fund’s equity portfolio holdings will contribute to the Fund’s income generation. In addition, the Fund’s equity portfolio may provide capital appreciation. The Fund’s strategy may result in high portfolio turnover on an annual basis.

Options Strategies

The Fund seeks to generate income from engaging in the Options Strategies primarily using options contracts on some or all of its Underlying Securities. In particular, the Fund will receive income in the form of a premium when it writes (sells) an option. By selling options, the Fund will earn premiums from buyers who pay for the right to buy or sell the underlying asset at a predetermined price. The Sub-Adviser can implement the Options Strategies in various market conditions. Depending on the Sub-Adviser’s outlook, ZEGA will select one Options Strategy or a combination of Options Strategies that it believes will best provide the Fund with current income while generally also attempting to capture some upside appreciation (potential for increase in asset value). Additionally, the Sub-Adviser considers the performance of the underlying securities. In some instances, the aim is to generate additional gains if the underlying security increases in value, while, in other cases, the aim is to limit losses if the underlying security decreases in value. Further, depending on the Sub-Adviser’s assessment of one or more of the Underlying Securities’ options contracts (e.g., they are insufficiently liquid or too costly), the Fund may employ Options Strategies using options on an “Biotech and Pharma ETF” (i.e., a passively-managed, U.S.-listed ETF that seeks to track the performance of an Biotech and Pharma Index (described below)). The Fund’s use of Options Strategies with Underlying Securities or ETFs will always be covered (e.g., the Fund may do call or put spreads).

The Fund may be subject to different outcomes depending on the Options Strategies used. For example:

- When writing a **covered call** (selling a call option on security the Fund already owns), the Fund might limit its potential for capital appreciation in exchange for premium income, which also provides some downside protection should the Underlying Security decline in value.
- When selling a **credit spread** (writing a call option at one strike price and buying another call option at a higher strike price or writing a put option at one strike price and buying another put option at a lower strike price), the Fund might limit the potential loss compared to selling an option outright, by capping it at the difference between the strike prices minus the net premium received. In a best case scenario, the options expire worthless and the Fund retains the premium on the written option.
- When selling a **diagonal call spread** (selling a call option with a nearer expiration date and buying a call option with a later expiration date at a different strike price), the Fund might benefit from the time decay (i.e., the reduction in an option’s value as the time to its expiration date approaches) of the nearer-term option. An option’s decay accelerates as its expiration date gets closer because there is less time for an investor to earn a profit from that option; however, there is no guarantee that the written option will expire worthless.
- Using an Options Strategy such as **cash-secured put selling** (selling put options while holding enough cash to purchase the underlying security if assigned), the Fund can potentially buy securities at lower prices should the Underlying Security decline in value due to the premium received, or retain the premium if the Underlying Security remains the same or increases in value.
- When selling **calendar call spreads** (selling a short-term option and buying a longer-term option at the same strike price), the Fund might benefit from the faster time decay of the short-term option. However, if the written option is exercised, the loss is offset by the premium received as well as the increase in value of the longer-term option.
- When selling **collars** (selling a call option and buying a put option to protect against significant price movements), the Fund might be able to generate income from the premium received while limiting potential losses. In a best case scenario, the security’s share price falls below the put strike price, and the Fund gains the difference between the security’s share price and strike price. Otherwise, the Fund will experience losses that will be partially offset by the premium received on the written option.

These Options Strategies impact the risk-return profile of the Fund, potentially affecting volatility, income generation, upside capture (gain potential), and capital preservation (protecting value).

Additionally, the premiums the Fund receives from selling options are directly influenced by market volatility; higher volatility (larger price swings) typically results in higher premiums. Therefore, the Sub-Adviser analyzes market conditions to determine the timing and type of Options Strategies to employ to achieve the primary objective of current income. By strategically entering and exiting options positions, the Sub-Adviser seeks to enhance the Fund’s income potential.

Treasuries

In addition, the Fund will hold cash or short-term U.S. Treasury securities. These securities serve a dual purpose: providing collateral for the Options Strategies and contributing to the Fund's income generation.

Why invest in the Fund?

- The Fund seeks to generate income, which is not dependent on the value of the Underlying Securities.
- The Fund seeks to participate in some of the potential gains experienced by increases in the share prices of the Underlying Securities.

The Fund is classified as “non-diversified” under the 1940 Act.

Under normal circumstances, the Fund will invest at least 80% of the value of its assets, plus borrowings for investment purposes, in the equity securities of Biotech and Pharma Companies and in options contracts on Biotech and Pharma Companies and on Biotech and Pharma ETFs. For purposes of the foregoing, the Fund defines a “Biotech and Pharma Company” as a company that generates at least 50% of its revenue from the research, development, manufacturing, and commercialization of biotechnological and pharmaceutical products, and a “Biotech and Pharma ETF” as a passively-managed, U.S.-listed ETF that seeks to track the performance of a biotech and/or pharma index.

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which they appear.

Biotech and Pharma Industry Group Risk. Companies in the biotech and pharmaceuticals industry group may be highly volatile and affected by industry competition, dependency on a limited number of products, obsolescence of products, government approvals and regulations, loss or impairment of intellectual property rights and litigation regarding product liability. These companies can be significantly affected by patent considerations, including the termination of patent protections for products, intense competition both domestically and internationally, rapid technological change and expensive insurance costs due to the risk of product liability lawsuits. In addition, this industry group is an emerging growth industry, and therefore some companies may be thinly capitalized and more volatile than companies with greater capitalizations. Biotechnology and pharmaceutical companies must contend with high development costs, which may be exacerbated by the inability to raise prices to cover costs because of managed care pressure, government regulation or price controls.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund in particular,

the value of the options contracts in which it invests are substantially influenced by the value of the Underlying Security. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly move with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. The Fund may also write call and put options, which includes the risk that the underlying instrument appreciates or depreciates sufficiently over the period to offset the net premium received by the Fund for the written option, resulting in a loss to the Fund. Additionally, to the extent the Fund maintains indirect exposure to an Underlying Security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as “rolling.” If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared (“cleared derivatives”). In a transaction involving cleared derivatives, the Fund’s counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house (“clearing members”) can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member’s individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund’s clearing member. In addition, although clearing members guarantee performance of their clients’ obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member’s bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member’s customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund’s behalf, which heightens the risks associated with a clearing member’s default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund’s behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund’s behalf, the Fund may be unable to effectively implement its investment strategy.

Distribution Risk. As part of the Fund’s investment objective to provide current income, the Fund seeks to provide monthly income distributions. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund’s NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund’s NAV will typically drop by the amount of the distribution on the related ex-dividend date (i.e., the date by which you need to own a dividend-paying stock in order to receive the upcoming dividend payment). The repeated payment of distributions by the Fund, if any, may significantly erode the Fund’s NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Equity Market Risk. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from specific issuers. The equity securities held in the Fund’s portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, or sectors in which the Fund invests. Common stocks, such as those held by the Fund, are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.

Concentration Risk. The Fund will concentrate its investments in the same industry group as that of the Biotech and Pharma Companies. To the extent that the Fund concentrates in a group of industries, it will be subject to the risk that economic, political, or other conditions that have a negative effect on that group of industries will negatively impact them to a greater extent than if its assets were invested in a wider variety of industries.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as “Authorized

Participants” or “APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund’s investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Buying or selling Shares involves certain costs, including brokerage commissions, other charges imposed by brokers, and bid-ask spreads. The bid-ask spread represents the difference between the price at which an investor is willing to buy Shares and the price at which an investor is willing to sell Shares. The spread varies over time based on the Shares’ trading volume and market liquidity. The spread is generally lower if Shares have more trading volume and market liquidity and higher if Shares have little trading volume and market liquidity. Due to the costs of buying or selling Shares, frequent trading of Shares may reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund’s NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange “circuit breaker” rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

Foreign Securities Risk. Investments in securities or other instruments of non-U.S. issuers involve certain risks not involved in domestic investments and may experience more rapid and extreme changes in value than investments in securities of U.S. companies. In addition, the Fund will be subject to risks associated with adverse political and economic developments in foreign countries, which may include the imposition of economic sanctions. Generally, there is less readily available and reliable information about non-U.S. issuers due to less rigorous disclosure or accounting standards and regulatory practices.

Emerging Markets Risk. The Fund may invest in securities issued by companies domiciled or headquartered in emerging market nations. Investments in securities traded in developing or emerging markets, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, currency, or regulatory conditions not associated with investments in U.S. securities and investments in more developed international markets. Such conditions may impact the ability of the Fund to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Fund Shares and cause the Fund to decline in value. It may also be more difficult to enforce contractual or shareholder rights in emerging market countries, which could negatively impact the Fund’s investments.

Depository Receipt Risk. Depository receipts involve risks similar to those associated with investments in foreign securities and certain additional risks. Depository receipts listed on U.S. exchanges are issued by banks or trust companies and entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares (“Underlying Shares”). When the Fund invests in depository receipts as a substitute for an investment directly in the Underlying Shares, the Fund is exposed to the risk that the depository receipts may not provide a return that corresponds precisely with that of the Underlying Shares. The

Fund may invest in unsponsored depositary receipts. The issuers of unsponsored depositary receipts are not obligated to disclose material information in the United States and, therefore, there may be less information available regarding such issuers and there may not be a correlation between such information and the value of the depositary receipts.

Foreign Currency Risk. A Fund's exposure to foreign currencies subjects the Fund to the risk that those currencies will decline in value relative to the U.S. Dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for any number of reasons, including changes in interest rates and the imposition of currency controls or other political developments in the U.S. or abroad.

General Market Risk. Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. Securities in the Fund's portfolio may underperform in comparison to securities in the general financial markets, a particular financial market, or other asset classes, due to a number of factors, including inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters or events, pandemic diseases, terrorism, regulatory events, and government controls.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Market Capitalization Risk.

- *Large-Capitalization Investing.* The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.
- *Mid-Capitalization Investing.* The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large-capitalization companies. The securities of mid-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large-capitalization stocks or the stock market as a whole.
- *Small-Capitalization Investing.* The securities of small-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large- or mid-capitalization companies. The securities of small-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large- or mid-capitalization stocks or the stock market as a whole. Some small capitalization companies have limited product lines, markets, financial resources, and management personnel and tend to concentrate on fewer geographical markets relative to mid- and large-capitalization companies. There is typically less publicly available information concerning smaller-capitalization companies than for larger, more established companies.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation (or expectations of inflation), deflation (or expectations of deflation), changes in the actual or perceived creditworthiness of issuers, general market liquidity, regulatory events, other governmental trade or market control programs and related geopolitical events. In addition, the value of the Fund's investments may be negatively affected by the occurrence of global events such as war, terrorism, environmental disasters, natural disasters or events, country instability, and infectious disease epidemics or pandemics. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund’s overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund’s ability to meet its investment objective. Although the Fund, Adviser, and Sub-Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund’s taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund’s performance history from year to year and showing how the Fund’s average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund’s website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the “Adviser”) serves as investment adviser to the Fund.

Investment Sub-Adviser: ZEGA Financial, LLC (the “Sub-Adviser”) serves as the investment sub-adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

When available, information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT THE FUNDS

Investment Objective

Each Fund’s primary investment objective is to seek current income. Further, each Fund has a secondary objective as follows:

- YieldMax™ AI & Tech Portfolio Option Income ETF’s secondary objective is to seek capital appreciation via investments in a select portfolio of AI and Technology Companies.
- YieldMax™ Crypto Industry & Tech Portfolio Option Income ETF’s secondary objective is to seek capital appreciation via investments in a select portfolio of Crypto Industry and Technology Companies.
- YieldMax™ China Portfolio Option Income ETF’s secondary objective is to seek capital appreciation via investments in a select portfolio of Greater China Companies.
- YieldMax™ Semiconductor Portfolio Option Income ETF’s secondary objective is to seek capital appreciation via investments in a select portfolio of Semiconductor Companies.
- YieldMax™ Biotech & Pharma Portfolio Option Income ETF’s secondary objective is to seek capital appreciation via investments in a select portfolio of Biotech and Pharma Companies.

An investment objective is fundamental if it cannot be changed without the consent of the holders of a majority of the outstanding Shares. No Fund’s investment objective has been adopted as a fundamental investment policy and therefore each Fund’s investment objective may be changed without the consent of that Fund’s shareholders upon approval by the Board of Trustees (the “Board”) of Tidal Trust II (the “Trust”) and at least 60 days’ written notice to shareholders.

Principal Investment Strategies

Each Fund has an 80% policy as follows:

YieldMax™ AI & Tech Portfolio Option Income ETF: Under normal circumstances, the Fund will invest at least 80% of the value of its assets, plus borrowings for investment purposes, in the equity securities of AI and Technology Companies and options contracts on AI and Technology Companies and AI ETFs. For purposes of the foregoing, the Fund defines an “AI and Technology Company” as a company that derives 50% or more of its revenue in one or more of the following proprietary sectors: (i) AI software and/or generative AI software, (ii) cloud infrastructure services (e.g., services that provide infrastructure-as-a-service to support the training of AI models), (iii) AI semiconductors (e.g., designing and manufacturing of key semiconductors for AI applications), (iv) network infrastructure (e.g., development of servers, storage, and networking equipment relevant for training and running generative AI models), (v) AI services (e.g., consulting and implementation services for generative AI software), (vi) software and information technology services companies,

(vii) manufacturers and distributors of technology hardware and equipment (e.g., communications equipment, cellular phones, computers and peripherals, electronic equipment and related instruments), (viii) semiconductors and semiconductor equipment, (ix) interactive media and services, and (x) diversified consumer services, broadband retail, and entertainment companies involved in the foregoing. The Fund defines an “AI ETF” as a passively managed U.S.-listed ETF that seeks to track the performance of an AI index.

YieldMax™ Crypto Industry & Tech Portfolio Option Income ETF: Under normal circumstances, the Fund will invest at least 80% of the value of its assets, plus borrowings for investment purposes, in the equity securities of Crypto Industry and Technology Companies and options contracts on Crypto Industry and Technology Companies, and Crypto Industry and Technology ETFs. For purposes of the foregoing, the Fund defines a “Crypto Industry and Technology Company” as a company that derives 50% or more of its revenue in one or more of the following proprietary sectors: (i) crypto asset mining, (ii) blockchain technology development (e.g., companies providing infrastructure and tools for blockchain networks), (iii) crypto asset trading platforms, (iv) digital wallet providers, (v) decentralized finance (DeFi) platforms, (vi) companies involved in the development of smart contract technology, (vii) manufacturers and distributors of hardware related to crypto asset (e.g., mining rigs, hardware wallets, and other related equipment), (viii) companies providing blockchain-as-a-service (BaaS), (ix) interactive platforms and services related to NFTs (non-fungible tokens), and (x) diversified financial services, payment processing companies, and technology providers involved in the foregoing. The Fund defines an “Crypto Industry and Technology ETF” as a passively managed U.S.-listed ETF that seeks to track the performance of a Crypto Industry or Technology Index. Lastly, the Fund defines an “Crypto Industry or Technology Index” as a benchmark that tracks the performance of a selection of stocks from companies operating in the Crypto Industry and/or technology sectors.

YieldMax™ China Portfolio Option Income ETF: Under normal circumstances, the Fund will invest at least 80% of the value of its assets, plus borrowings for investment purposes, in the equity securities of Greater China Companies, and options contracts on Greater China Companies and Greater China ETFs. For purposes of the foregoing, the Fund defines a “Greater China Company” as a company that is either incorporated or headquartered in China, Taiwan or Hong Kong. The Fund defines a “Greater China ETF” as a passively managed U.S.-listed ETF that seeks to track the performance of a Greater China Index. Lastly, the Fund defines a “Greater China Index” as a benchmark that tracks the performance of a selection of Greater China Companies.

YieldMax™ Semiconductor Portfolio Option Income ETF: Under normal circumstances, the Fund will invest at least 80% of the value of its assets, plus borrowings for investment purposes, in the equity securities of Semiconductor Companies and options contracts on Semiconductor Companies, and Semiconductor ETFs. For purposes of the foregoing, the Fund defines a “Semiconductor Company” as a company that generates at least 50% of its revenue from the design, manufacture, or sale of semiconductors or semiconductor equipment, and a “Semiconductor ETF” as a passively-managed, U.S.-listed ETF that seeks to track the performance of a semiconductor index. Lastly, the Fund defines a “Semiconductor Index” as a benchmark that tracks the performance of a selection of stocks from companies operating in the semiconductor industry.

YieldMax™ Biotech & Pharma Portfolio Option Income ETF: Under normal circumstances, the Fund will invest at least 80% of the value of its assets, plus borrowings for investment purposes, in the equity securities of Biotech and Pharma Companies and options contracts on (i) Biotech and Pharma Companies; and/or (ii) Biotech and Pharma ETFs. For purposes of the foregoing, the Fund defines a “Biotech and Pharma Company” as a company that generates at least 50% of its revenue from the research, development, manufacturing, and commercialization of biotechnological and pharmaceutical products, and a “Biotech and Pharma ETF” as a passively-managed, U.S.-listed ETF that seeks to track the performance of a biotech and/or pharma index.

For each Fund’s 80% test, the notional value of its options contracts will be used. “Notional value” refers to the “face” value of a Fund investment, rather than the amount of capital the Fund has actually committed. It represents the total value of the Fund’s position, rather than its equity in that position. Essentially, it reflects the full value of a leveraged position in the market, even if the Fund uses a fraction of that amount as collateral.

Each Fund’s 80% policy is non-fundamental and can be changed without shareholder approval. However, Fund shareholders would be given at least 60 days’ notice prior to any such change.

Each Fund will likely engage in active and frequent trading of Underlying Securities and options contracts. The frequency with which a Fund buys and sells Underlying Securities will vary, depending on market conditions. Each Fund will conduct regular reviews of its portfolio holdings, at least once a month, to determine whether one or more of its Options Strategies should be increased, decreased, or eliminated and whether any such strategy should be implemented on any new Underlying Securities (or ETF that would otherwise be eligible to be an Underlying Security). It is expected that most of each Fund’s Options Strategies will be held for less than one year, and therefore, gains, if any, are likely to be subject to short-term capital gains taxes.

Each Fund intends to maintain its Options Strategies through the use of options contracts. As the options contracts it holds are traded, exercised or expire, it may enter into new options contracts, a practice referred to as “rolling.” The Fund’s practice of rolling options may result in high portfolio turnover.

Options Terminology

Each Fund's options contracts are based on the share prices of the corresponding Underlying Securities and, if applicable, relevant sector ETFs, which gives each Fund the right or obligation to receive or deliver shares of the Underlying Securities and/or ETFs on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether a Fund purchases or sells the option contract.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Securities) at a specified price (the "strike price").
- If exercised, an option contract obligates the seller to deliver shares (for a sold or "short" call) or buy shares (for a sold or "short" put) of the underlying asset at a specified price (the "strike price").
- Options contracts must be exercised or traded to close within a specified time frame, or they expire.

Options Strategies

As noted above under each Fund's principal investment strategy disclosures, the Funds are managed using various options strategies. The following describes the options strategies that the Sub-Adviser plans to implement at various times to manage the Funds' assets. Each Fund's options strategies using options contracts will be "covered." That is, a Fund will implement an options strategy on an Underlying Security that the Fund owns, or the Fund will have a synthetic long exposure to the Underlying Security. Alternatively, for Options Strategies involving ETFs that are not Underlying Securities, the Fund will implement inherently covered Options Strategies, such as credit spreads.

To achieve a synthetic long exposure to an Underlying Security, a Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of an Underlying Security. The call options purchased by a Fund and the put options sold by the Fund will generally have two-month to one-year terms and strike prices that are approximately equal to then-current share price of an Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with investment exposure equal to approximately 100% of an Underlying Security for the duration of the applicable options exposure.

1. Selling Calls

Strategy Overview: Selling calls involves writing call options on a security, aiming to generate additional income from the premium received. This strategy profits if the security's share price remains below the strike price.

Market Movement Scenarios:

1. **Security Increases in Value:** If the security's share price rises above the strike price, the Fund will benefit up to the level of the strike price and will then be capped on additional gains. This is because the gains of the long exposure to the underlying security are offset by the cost to cover the written call option.
2. **Security Remains the Same:** If the security's share price remains the same or appreciates up to the premium of the written call option, the call option will expire worthless, and the Fund keeps the premium received as profit.
3. **Security Decreases in Value:** If the security's share price decreases, the call option will expire worthless, and the Fund keeps the premium received as profit.

2. Selling Credit Spreads

Strategy Overview: Selling credit spreads involves writing a call option at one strike price and buying another call option at a higher strike price or writing a put option at one strike price and buying another put option at a lower strike price. This strategy limits the potential loss compared to selling an option outright by capping it at the difference between the strike prices minus the net premium received.

- **Market Movement Scenarios (Call Example):**

1. **Security Increases in Value:** If the security's share price rises above the higher strike price, the option position will lose the difference between the strike prices minus the net premium received. Between strikes, the option position loses the difference between the security's share price and the lower strike.

2. **Security Remains the Same:** If the security's share price remains the same, both options will expire worthless, and the Fund keeps the net premium received as profit.
3. **Security Decreases in Value:** If the security's share price decreases, both options will expire worthless, and the Fund keeps the net premium received as profit.

- **Market Movement Scenarios (Put Example):**

1. **Security increases in Value:** If the security's share price increases, both options will expire worthless, and the Fund keeps the net premium received as profit.
2. **Security Remains the Same:** If the security's share price remains the same, both options will expire worthless, and the Fund keeps the net premium received as profit.
3. **Security decreases in Value:** If the security's share price decreases below the higher strike price, the Fund's loss is capped at the difference between the strike prices minus the net premium received. Between strikes the option position loses the difference between the security's share price and the lower strike.

3. Selling Diagonal Call Spreads

Strategy Overview: Selling diagonal call spreads involves selling a call option with a nearer expiration date and buying a call option with a later expiration date at a different strike price. This strategy aims to benefit from the time decay (see below) of the nearer-term option.

- Time decay is the reduction in an option's value as the time to its expiration date approaches. An option's decay accelerates as its expiration date gets closer because there is less time for an investor to earn a profit from that option.

Market Movement Scenarios (at the max maturity date of the options):

1. **Security Increases in Value:** If the security's share price rises above the higher strike price, the option position's loss is capped at the difference between the strike prices minus the net premium received. Between strikes the option position loses the difference between the security's share price and the lower strike.
2. **Security Remains the Same:** If the security's share price remains the same, both options will expire worthless, and the Fund keeps the net premium received as profit.
3. **Security Decreases in Value:** If the security's share price decreases, both options will expire worthless, and the Fund keeps the net premium received as profit.

4. Cash-Secured Out of the Money Put Selling

Strategy Overview: Cash-secured put selling involves selling put options at a strike price below the market while holding enough cash to buy the security at the strike price if assigned. This strategy generates income from the premium received.

Market Movement Scenarios:

1. **Security Increases in Value:** If the security's share price rises higher than the strike of the put option, the put option will expire worthless, and the Fund keeps the premium received.
2. **Security Remains the Same:** If the security's share price remains the same, the put option will expire worthless, and the Fund keeps the premium received.
3. **Security Decreases in Value:** If the security's share price decreases, the Fund may be assigned the security (i.e., the Fund will need to purchase the security) at the strike price, but the Fund effectively buys it at a lower net price due to the premium received.

5. Selling Calendar Call Spreads

Strategy Overview: Selling calendar call spreads involves selling a short-term option and buying a longer-term option at the same strike price. This strategy benefits from the faster time decay of the short-term option.

Market Movement Scenarios (between the two maturity dates):

1. **Security Increases in Value:** If the security's share price rises above the strike, the short-term option will be covered at a loss, minus the premium received, but the long-term option increases in value, offsetting some losses.
2. **Security Remains the Same (below the strike):** If the security's share price remains the same, the short-term option expires worthless, and the Fund profits from the time decay differential; however, the long-term option will experience some decay resulting in an offsetting loss.
3. **Security Decreases in Value:** If the security's share price decreases, the short-term option expires worthless, and the Fund profits from the time decay differential; however, the long-term option will experience some decay resulting in an offsetting loss.

6. Selling Collars

Strategy Overview: Selling collars involves selling a call option and buying a put option to limit volatility against significant price movements, aiming to generate income from the premium received while limiting potential losses.

Market Movement Scenarios:

1. **Security Increases in Value:** If the security's share price rises above the call strike price, the call option position loses the difference between the security's share price and strike price.
2. **Security Remains the Same:** If the security's share price remains the same, both options expire worthless, and the Fund keeps the premium received from the call option, but offset by the loss of premium paid on the put option.
3. **Security Decreases in Value:** If the security's share price falls below the put strike price, the put option position gains the difference between the security's share price and strike price of the long put option, as well as earning the premium from the sold call option.

Supplemental Options Strategy (Debit Spreads)

In concert with one or more the foregoing options strategies, the Fund may buy call or put spreads, known as debit spreads. Although these transactions do not directly generate income, the Sub-Adviser may use them strategically with the other options strategies to offset margin requirements and enhance overall income potential. The Fund may "leg into" debit spreads by entering the spread in stages, starting with an initial position and later adding the second leg. For example, the Sub-Adviser may use debit spreads instead of covering a worthless call. In this case, the Fund would enter a call spread with a lower strike call, thereby increasing the Fund's potential for gains while maintaining the cost efficiency of the position.

There is no guarantee that a Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Exchange Traded Options

The Funds will purchase and sell a combination of call and put exchange traded options contracts. FLEX options are customized options contracts that trade on an exchange but provide investors with the ability to customize key contract terms like strike price, style and expiration date while achieving price discovery in competitive, transparent auctions markets and avoiding the counterparty exposure of "over-the-counter" ("OTC") options positions. Like traditional exchange-traded options, FLEX Options are guaranteed for settlement by the OCC, a market clearinghouse that guarantees performance by counterparties to certain derivatives contracts.

The FLEX options in which the Funds may invest are all European style options (options that are exercisable only on the expiration date). As of the date of this prospectus, the FLEX options are generally listed on the Chicago Board Options Exchange.

YieldMax™ Crypto Industry & Tech Portfolio Option Income ETF - Crypto Asset Exposure

The Fund invests in companies involved in the crypto asset industry, and the Fund is therefore exposed to the crypto asset industry and its unique characteristics, such the use of blockchain technology. Generally, a blockchain is an immutable transaction ledger maintained within a distributed network of peer nodes. The immutability of the blockchain means that once an entry is accepted onto the ledger, it cannot be deleted or changed. A public, permissionless blockchain is a type of blockchain that is open to anyone who wishes to participate, without requiring permission from any central authority. It is decentralized and operates based on a consensus mechanism that ensures trust and security without the need for intermediaries.

The first blockchain/crypto asset was bitcoin and was developed to be a decentralized, peer-to-peer electric cash network; disintermediating centralized monetary systems. Each block contains a list of transactions that, once verified and added to the blockchain through a consensus process known as “proof of work,” which may take an hour or more, becomes irreversible and tamper-evident. This proof of work process occurs through “mining.” Mining involves miners using a sophisticated computer program to repeatedly solve complex mathematical problems on specialized computer hardware. Miners authenticate and bundle bitcoin transactions sequentially into files called “blocks.” Because each solved block contains a reference to the previous block, they form a chronological “chain” back to the first bitcoin transaction. A miner’s proposed block is added to the blockchain once a majority of the nodes on the network confirm the miner’s work. A miner that is successful in adding a block to the blockchain is automatically awarded a fixed amount of bitcoin for its efforts plus any transaction fees paid by transferors whose transactions are recorded in the block. This reward system is the means by which new bitcoin enter circulation.

The bitcoin network allows people to exchange tokens of value, called bitcoin, which are recorded on a public transaction ledger known as the Bitcoin Blockchain. Each bitcoin is associated with a set of unique cryptographic “keys”, in the form of a string of numbers and letters, which allow whoever is in possession of the private key to assign that bitcoin in a transfer that the bitcoin network will recognize. One or more private keys control the transfer or “spending” of bitcoin from an associated public address. To use bitcoin, a user or a service provider must have access to keys that identify it for its transactions (similar to an ATM card and its related PIN). Bitcoin users keep their keys in electronic “wallets” that can be maintained on their computers, mobile phones, specialized hardware wallets, or wallets provided by online custodians.

While the bitcoin network allows for the exchange of bitcoin, a token of value, there are other blockchains that are designed to support different uses. For example, the Ethereum Network also allows users to write and implement smart contracts—that is, general-purpose code that executes on every computer in the network and can instruct the exchange of information and value based on a sophisticated set of logical conditions.

Bitcoin (and other crypto assets) can be used to pay for goods and services, although they are not currently widely accepted for such purpose, or they can be converted to fiat currencies, such as the U.S. dollar, at rates determined on digital asset trading platforms that enable trading in bitcoin or in individual end-user-to-end-user transactions under a barter system. Blockchain technology has since evolved to allow for greater programmability, which has resulted in a wide array of use cases, including smart contracts, without sacrificing the blockchains three core tenants: decentralization, security, and scalability.

Manager of Managers Structure

The Funds and the Adviser have received exemptive relief from the SEC permitting the Adviser (subject to certain conditions and the approval of the Board) to change or select new unaffiliated sub-advisers without obtaining shareholder approval. The relief also permits the Adviser to materially amend the terms of agreements with an unaffiliated sub-adviser (including an increase in the fee paid by the Adviser to the unaffiliated sub-adviser (and not paid by the Fund)) or to continue the employment of an unaffiliated sub-adviser after an event that would otherwise cause the automatic termination of services with Board approval, but without shareholder approval. Shareholders will be notified of any unaffiliated sub-adviser changes. The Adviser has the ultimate responsibility, subject to oversight by the Board, to oversee a sub-adviser and recommend their hiring, termination and replacement.

Investments by Registered Investment Companies

Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies. However, registered investment companies are permitted to invest in other investment companies beyond the limits set forth in Section 12(d)(1) in rules under the 1940 Act, subject to certain conditions. The Fund may rely on Rule 12d1-4 of the 1940 Act, which provides an exemption from Section 12(d)(1) that allows the Fund to invest beyond the limits set forth in Section 12(d)(1) if the Fund satisfies certain conditions specified in Rule 12d1-4, including, among other conditions, that the Fund and its advisory group will not control (individually or in the aggregate) an acquired fund (e.g., hold more than 25% of the outstanding voting securities of an acquired fund that is a registered open-end management investment company).

Principal Risks of Investing in the Funds

The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a “principal risk” of investing in the Funds, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in a Fund. Some or all of these risks may adversely affect a Fund’s NAV per share, trading price, yield, total return and/or ability to meet its investment objective. The following risks could affect the value of your performance in the Funds: The risks below apply to each Fund as indicated in the following table. Additional information about each such risk and its potential impact on a Fund is set forth below the table.

Artificial Intelligence Risk. Issuers engaged in artificial intelligence typically have high research and capital expenditures and, as a result, their profitability can vary widely, if they are profitable at all. The space in which they are engaged is highly competitive and issuers' products and services may become obsolete very quickly. These companies are heavily dependent on intellectual property rights and may be adversely affected by loss or impairment of those rights. The issuers are also subject to legal, regulatory and political changes that may have a large impact on their profitability. A failure in an issuer's product or even questions about the safety of the product could be devastating to the issuer, especially if it is the marquee product of the issuer. It can be difficult to accurately capture what qualifies as an artificial intelligence company.

Biotech and Pharma Industry Group Risk. Companies in the biotech and pharmaceuticals industry group may be highly volatile and affected by industry competition, dependency on a limited number of products, obsolescence of products, government approvals and regulations, loss or impairment of intellectual property rights and litigation regarding product liability. These companies can be significantly affected by patent considerations, including the termination of patent protections for products, intense competition both domestically and internationally, rapid technological change and expensive insurance costs due to the risk of product liability lawsuits. In addition, this industry group is an emerging growth industry, and therefore some companies may be thinly capitalized and more volatile than companies with greater capitalizations. Biotechnology and pharmaceutical companies must contend with high development costs, which may be exacerbated by the inability to raise prices to cover costs because of managed care pressure, government regulation or price controls.

Concentration Risk. The Fund will be concentrated in securities of issuers having their principal business activities in the group of industries as described above. To the extent that the Fund concentrates in a group of industries, it will be subject to the risk that economic, political, or other conditions that have a negative effect on that group of industries will negatively impact them to a greater extent than if its assets were invested in a wider variety of industries.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Crypto Industry Risk. Investing in the Crypto Industry involves substantial risks, including but not limited to market volatility, regulatory changes, technological obsolescence, and security vulnerabilities. Crypto Industry companies typically face significant volatility due to the nascent and rapidly evolving nature of the sector. High research and capital expenditures are common, which can result in substantial variability in profitability, or even sustained losses. The industry is intensely competitive, with technological advancements occurring at a rapid pace, potentially rendering existing products or services obsolete. These companies are heavily reliant on digital and intellectual property, including proprietary blockchain technology and cryptographic algorithms, and may be adversely affected by the loss, theft, or impairment of these assets. Furthermore, the Crypto Industry is subject to a complex and constantly changing legal, regulatory, and political landscape, which can have a substantial impact on the profitability and viability of companies within the sector. Regulatory actions or unfavorable legal rulings could significantly hinder operations or market access. Additionally, security breaches, hacking incidents, or failures in the underlying technology of a crypto asset or blockchain could have devastating effects on the issuer, particularly if the compromised asset or technology is central to the issuer's business model. The identification and

classification of Crypto Industry companies can be challenging, as the boundaries of the industry are often unclear and subject to interpretation.

Derivatives Risk. The Funds' derivative investments have risks, including the imperfect correlation between the value of such instruments and the underlying assets; the loss of principal, including the potential loss of amounts greater than the initial amount invested in the derivative instrument; the possible default of the other party to the transaction; and illiquidity of the derivative investments. Use of derivatives could also result in a loss if the counterparty to the transaction does not perform as promised, including because of such counterparty's bankruptcy or insolvency. This risk may be greater during volatile market conditions. Other risks include the inability to close out a position because the trading market becomes illiquid (particularly in the OTC markets) or the availability of counterparties becomes limited for a period of time. In addition, the presence of speculators in a particular market could lead to price distortions.

Certain of the Funds' transactions in derivatives could also affect the amount, timing, and character of distributions to shareholders, which may result in a Fund realizing more short-term capital gain and ordinary income subject to tax at ordinary income tax rates than it would if it did not engage in such transactions, which may adversely impact such Fund's after-tax returns.

In addition, each Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For each of the Funds, the value of the options contracts in which the Fund invests are substantially influenced by the value of the applicable underlying securities. The Funds may experience substantial downside from specific option positions and certain option positions held by a Fund may expire worthless. The options held by the Funds are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly moves with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in the values of options contracts and the reference asset, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Funds will be determined based on market quotations or other recognized pricing methods. A Fund may also write call and put options, which includes the risk that the underlying instrument appreciates or depreciates sufficiently over the period to offset the net premium received by the Fund for the written option, resulting in a loss to the Fund. Additionally, to the extent a Fund maintains indirect exposure to an underlying security through the use of options contracts, as the options contracts it holds are exercised or expire it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, a Fund may experience losses.

Distribution Risk. As part of the Funds' investment objectives to provide current income, the Funds seek to provide monthly income distributions. There is no assurance that the Funds will make a distribution in any given month. If a Fund makes distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Funds have a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. Each Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, a Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, a Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause a Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, a Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on a Fund in connection with a cash

redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of a Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Buying or selling Shares involves certain costs, including brokerage commissions, other charges imposed by brokers, and bid-ask spreads. The bid-ask spread represents the difference between the price at which an investor is willing to buy Shares and the price at which an investor is willing to sell Shares. The spread varies over time based on the Shares' trading volume and market liquidity. The spread is generally lower if Shares have more trading volume and market liquidity and higher if Shares have little trading volume and market liquidity. Due to the costs of buying or selling Shares, frequent trading of Shares may reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as the Exchange, and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of a Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above a Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of a Fund will continue to be met or will remain unchanged. As a result, a Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

Equity Market Risk. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from specific issuers. The equity securities held in the Fund's portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, or sectors in which the Fund invests. Common stocks, such as those held by the Fund, are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.

Foreign Securities Risk. Investments in securities or other instruments of non-U.S. issuers involve certain risks not involved in domestic investments and may experience more rapid and extreme changes in value than investments in securities of U.S. companies. In addition, a Fund will be subject to risks associated with adverse political and economic developments in foreign countries, which may include the imposition of economic sanctions. Generally, there is less readily available and reliable information about non-U.S. issuers due to less rigorous disclosure or accounting standards and regulatory practices.

Emerging Markets Risk. A Fund may invest in securities issued by companies domiciled or headquartered in emerging market nations. Investments in securities traded in developing or emerging markets, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, currency, or regulatory conditions not associated with investments in U.S. securities and investments in more developed international markets. Such conditions may impact the ability of a Fund to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Fund Shares and cause the Fund to decline in value. It may also be more difficult to enforce contractual or shareholder rights in emerging market countries, which could negatively impact the Fund's investments.

Depository Receipt Risk. Depository receipts involve risks similar to those associated with investments in foreign securities and certain additional risks. Depository receipts listed on U.S. exchanges are issued by banks or trust companies and entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares ("Underlying Shares"). When a Fund invests in depository receipts as a substitute for an investment directly in the Underlying Shares, the Fund is exposed to the risk that the depository receipts may not provide a return that corresponds precisely with that of the Underlying Shares. A Fund may invest in unsponsored depository receipts. The issuers of unsponsored depository receipts are not obligated to disclose material information in the United States and, therefore, there may be less information available regarding such issuers and there may not be a correlation between such information and the value of the depository receipts.

Foreign Currency Risk. A Fund's exposure to foreign currencies subjects the Fund to the risk that those currencies will decline in value relative to the U.S. Dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for any

number of reasons, including changes in interest rates and the imposition of currency controls or other political developments in the U.S. or abroad.

General Market Risk. Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. Securities in the Fund's portfolio may underperform in comparison to securities in the general financial markets, a particular financial market, or other asset classes, due to a number of factors, including inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters or events, pandemic diseases, terrorism, regulatory events, and government controls.

Greater China Investing Risk. Investing in ADRs, GDRs, and other types of depositary receipts with underlying shares organized, listed, or domiciled in China, Hong Kong, and Taiwan involves unique and significant risks. These risks include the potential for nationalization, expropriation, or confiscatory taxation; substantial social, economic, and political uncertainties; dependency on exports and international trade; higher inflation rates; and extensive governmental control over the economy. Additionally, China's economic structure, regulatory environment, and financial reporting standards differ markedly from those in more established markets, presenting challenges such as unreliable statistical data and the limited ability of the Public Company Accounting Oversight Board ("PCAOB") to inspect audit work in China and Hong Kong. The close economic ties between China and Hong Kong mean that economic downturns or political instability in China could have a direct negative impact on Hong Kong's economy and financial markets. Political risks, especially those related to China's influence over Hong Kong and ongoing tensions with Taiwan, could further disrupt markets and undermine investor confidence. The potential end of the Hong Kong dollar's peg to the U.S. dollar could also introduce currency risk, potentially affecting the Fund's NAV. Additionally, Taiwan's economy, which is heavily reliant on exports, faces vulnerabilities due to its dependence on global trade and the economies of key trading partners like the U.S., China, and Japan. These factors, along with the potential for underdeveloped financial reporting practices, public health crises, and geopolitical tensions, could severely impact the Fund's performance.

High Portfolio Turnover Risk. The Funds may actively and frequently trade all or a significant portion of the securities in its portfolio. A high portfolio turnover rate increases transaction costs, which may increase a Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Funds due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Market Capitalization Risk.

- *Large-Capitalization Investing.* The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.
- *Mid-Capitalization Investing.* The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large-capitalization companies. The securities of mid-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large-capitalization stocks or the stock market as a whole.
- *Small-Capitalization Investing.* The securities of small-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large- or mid-capitalization companies. The securities of small-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large- or mid-capitalization stocks or the stock market as a whole. Some small capitalization companies have limited product lines, markets, financial resources, and management personnel and tend to concentrate on fewer geographical markets relative to mid- and large-capitalization companies. There is typically less publicly available information concerning smaller-capitalization companies than for larger, more established companies.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation (or expectations of inflation), deflation (or expectations of deflation), changes in the actual or perceived creditworthiness of issuers, general market liquidity, market instability, financial system instability, debt crises and downgrades, embargoes, tariffs, sanctions and other trade barriers, regulatory events, other governmental trade or market control programs and related geopolitical events. In addition, the value of the Fund's investments may be negatively affected by the occurrence of global events such as war, terrorism, environmental disasters, natural disasters or events, country instability, and infectious disease epidemics or pandemics. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and

Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Money Market Instrument Risk. The Funds may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

NAV Erosion Risk Due to Distributions. If a Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date (i.e., the date by which you need to own a dividend-paying stock in order to receive the upcoming dividend payment). The repeated payment of distributions, if any, by a Fund may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because each Fund is "non-diversified," a Fund may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause a Fund's overall value to decline to a greater degree than if such Fund held a more diversified portfolio. This may increase the Fund's volatility and have a greater impact on such Fund's performance. This may increase a Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Operational Risk. Each Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Funds' service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. Each Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect a Fund's ability to meet its investment objective. Although the Funds and the Funds' investment advisor seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Semiconductor Industry Risk. Semiconductor companies may face intense competition, both domestically and internationally, and such competition may have an adverse effect on their profit margins. Semiconductor companies may have limited product lines, markets, financial resources or personnel. Semiconductor companies' supply chain and operations are dependent on the availability of materials that meet exacting standards and the use of third parties to provide components and services. Semiconductor companies may rely on a limited number of suppliers, or upon suppliers in a single location, for certain materials, equipment or tools. Finding and qualifying alternate or additional suppliers can be a lengthy process that can cause production delays or impose unforeseen costs, and such alternatives may not be available at all. Production can be disrupted by the unavailability of resources, such as water, silicon, electricity, gases and other materials. Suppliers may also increase prices or encounter cybersecurity or other issues that can disrupt production or increase production costs.

The products of semiconductor companies may face obsolescence due to rapid technological developments and frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Capital equipment expenditures could be substantial, and equipment generally suffers from rapid obsolescence. Companies in the semiconductor industry are heavily dependent on patent and intellectual property rights. The loss or impairment of these rights would adversely affect the profitability of these companies.

Tax Risk. The Funds intend to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, each Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If a Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed.

Technology Sector Risk. The Fund will invest substantially in companies in the information technology sector, and therefore the performance of the Fund could be negatively impacted by events affecting this sector. Market or economic factors impacting technology companies and companies that rely heavily on technological advances could have a significant effect on the value of the Fund's investments. The value of stocks of information technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be

more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.

U.S. Government and U.S. Agency Obligations Risk. The Funds may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

PORTFOLIO HOLDINGS

Information about each Fund’s daily portfolio holdings is, or will be, available on the Funds’ website at www.yieldmaxetfs.com.

A complete description of each Fund’s policies and procedures with respect to the disclosure of a Fund’s portfolio holdings is available in the Funds’ SAI.

MANAGEMENT

Investment Adviser

Tidal Investments LLC (the “Adviser”), located at 234 West Florida Street, Suite 203, Milwaukee, Wisconsin 53204, is an SEC registered investment adviser and a Delaware limited liability company. Tidal was founded in March 2012 and is dedicated to understanding, researching and managing assets within the expanding ETF universe. As of September 30, 2024, Tidal had assets under management of approximately \$20.5 billion and served as the investment adviser or sub-adviser for 227 registered funds.

Tidal serves as investment adviser to the Funds and has overall responsibility for the general management and administration of the Funds pursuant to an investment advisory agreement with the Trust, on behalf of each Fund (the “Advisory Agreement”). The Adviser also arranges for sub-advisory, transfer agency, custody, fund administration, and all other related services necessary for the Fund to operate. For the services provided to the Funds, each Fund pays the Adviser a unitary management fee of 0.99%, which is calculated daily and paid monthly, at an annual rate based on such Fund’s average daily net assets.

Under the Advisory Agreement, in exchange for a single unitary management fee from the Fund, the Adviser has agreed to pay all expenses incurred by such Fund except for its advisory fee, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, extraordinary expenses, distribution fees and expenses paid by a Fund under any distribution plan adopted pursuant to Rule 12b-1 under the 1940 Act, and the unitary management fee payable to the Adviser (collectively, the “Excluded Expenses”).

Investment Sub-Adviser

ZEGA Financial, LLC, a Nebraska limited liability company, located at 3801 PGA Blvd, Palm Beach Gardens, FL 33410, serves as investment sub-adviser to the Funds pursuant to a sub-advisory agreement between the Adviser and the Sub-Adviser (the “Sub-Advisory Agreement”). ZEGA is responsible for the day-to-day management of the Funds’ portfolios, including determining the securities purchased and sold by each Fund and trading portfolio securities for each Fund, subject to the supervision of the Adviser and the Board. ZEGA is an independent investment advisor founded in 2011 offering discretionary and non-discretionary portfolio management services to separately managed accounts. For its services, ZEGA is paid a fee by the Adviser, which fee is calculated daily and paid monthly, at an annual rate based on each Fund’s average daily net assets per the following table:

Fund Net Asset Levels	Sub-Advisory Fee*
\$0 to \$250 million	0.12%
>\$250 million to \$500 million	0.11%
>\$500 million to \$1 billion	0.10%
> \$1 billion	0.09%

* The sub-advisory fee is subject to a minimum of \$36,000 per annum.

The Sub-Adviser has agreed to assume a portion of the Adviser’s obligation to pay all expenses incurred by one or more of the Funds, except for the sub-advisory fee payable to the Sub-Adviser and Excluded Expenses. Such expenses incurred by a Fund and paid by the Sub-Adviser include fees charged by Tidal ETF Services, LLC, the Fund’s administrator and an affiliate of the Adviser. In addition to its sub-advisory fee, the Sub-Adviser may receive from the Adviser, in certain circumstances, a portion of the Adviser’s management

fee in recognition of the risk it assumes in incurring the obligation to pay fund expenses as described above. As of September 30, 2024, the Sub-Adviser had approximately \$5,517 million in assets under management.

Advisory & Sub-Advisory Agreements

A discussion regarding the basis for the Board's approval of the Advisory Agreement and the Sub-Advisory Agreement is available in the Fund's July 31, 2024 annual Certified Shareholder Report.

Portfolio Managers

The following individuals (each, a "Portfolio Manager") have served as portfolio managers of each Fund since inception in. Mr. Pestrichelli is primarily responsible for the day-to-day management of each Fund, and Ms. Duan and Mr. Mullen oversee trading and execution for each Fund.

Jay Pestrichelli, Portfolio Manager for the Sub-Adviser

Mr. Pestrichelli co-founded the Sub-Adviser in 2011 and is Chief Executive Officer. Mr. Pestrichelli has over 20 years of experience in the financial markets. Mr. Pestrichelli has led the development and execution of the firm's investment strategies since its inception in 2011. He is also the author of the best-selling book "Buy & Hedge: The Five Iron Rules for Investing Over the Long Term." Prior to founding the Sub-Adviser in 2011, Mr. Pestrichelli spent 12 years managing and growing the online trading business for TD Ameritrade from 1999 to 2010. Mr. Pestrichelli has a Bachelor degree in Behavioral Science from Concordia College.

Qiao Duan, CFA, Portfolio Manager for the Adviser

Qiao Duan serves as Portfolio Manager at the Adviser, having joined the firm in October 2020. From February 2017 to October 2020, she was an execution Portfolio Manager at Exponential ETFs, where she managed research and analysis relating to all Exponential ETF strategies. Ms. Duan previously served as a portfolio manager for the Exponential ETFs from their inception in May 2019 until October 2020. Ms. Duan received a Master of Science in Quantitative Finance and Risk Management from the University of Michigan in 2016 and a Bachelor of Science in Mathematics and Applied Mathematics from Xiamen University in 2014. She holds the CFA designation.

Christopher P. Mullen, Portfolio Manager for the Adviser

Christopher P. Mullen serves as Portfolio Manager at the Adviser, having joined the firm in January 2024. From September 2019 to December 2023, he was a Portfolio Manager at Vest Financial LLC, where he managed exchange-traded funds, mutual funds and retirement fund portfolios. Mr. Mullen previously served as a Senior Portfolio Analyst at ProShares Advisors LLC from September 2016 until September 2019. Prior to that, Mr. Mullen served as associate portfolio manager at USCF Investments LLC from February 2013 to September 2016. Mr. Mullen received a Master of Business Administration from the University of Maryland. He also holds a dual bachelor's degree in global politics and history from Marquette University.

CFA® is a registered trademark owned by the CFA Institute.

The Funds' SAI provides additional information about each portfolio manager's compensation structure, other accounts that each portfolio manager manages, and each portfolio manager's ownership of Shares.

Fund Supporters

The Adviser, Tidal, ZEGA, Lucania Investments LLC ("Lucania"), and Level ETF Ventures LLC ("Level," and together with the Adviser, ZEGA and Lucania, the "Supporters" and each a "Supporter") have entered into a fund support agreement pursuant to which each Supporter has agreed to provide financial support (as described below) to the Funds. Every month, the unitary management fees for each Fund are calculated and paid to the Adviser, and the Adviser retains a portion of the unitary management fees from each Fund. In return for its financial support for the Funds, the Adviser has agreed to pay each Supporter a portion of any remaining profits generated by the unitary management fees for the Funds. If the aggregate amount of the unitary management fees for the Funds exceeds the aggregate of the Funds' operating expenses and the Adviser-retained amounts, that excess amount is considered "remaining profit." In that case, the Adviser will pay a portion of the remaining profits to the Supporters. Further, if the aggregate amount of the unitary management fees for the Funds is less than the aggregate of Funds' operating expenses and the Adviser-retained amounts, each Supporter is obligated to reimburse the Adviser for a portion of the shortfall.

HOW TO BUY AND SELL SHARES

Each Fund issues and redeems Shares only in Creation Units at the NAV per share next determined after receipt of an order from an AP. Only APs may acquire Shares directly from a Fund, and only APs may tender their Shares for redemption directly to the Funds, at NAV. APs must be a member or participant of a clearing agency registered with the SEC and must execute a Participant Agreement that has been agreed to by the Distributor (defined below), and that has been accepted by a Fund's transfer agent, with respect to purchases and redemptions of Creation Units. Once created, Shares trade in the secondary market in quantities less than a Creation Unit.

In order to purchase Creation Units of a Fund, an AP must generally deposit a designated portfolio of equity securities (the “Deposit Securities”) and/or a designated amount of U.S. cash. Purchases and redemptions of Creation Units primarily with cash, rather than through in-kind delivery of portfolio securities, may cause the Funds to incur certain costs. These costs could include brokerage costs or taxable gains or losses that it might not have incurred if it had made redemption in-kind. These costs could be imposed on a Fund, and thus decrease the Fund’s NAV, to the extent that the costs are not offset by a transaction fee payable by an AP.

Most investors buy and sell Shares in secondary market transactions through brokers. Individual Shares are listed for trading on the secondary market on the Exchange and can be bought and sold throughout the trading day like other publicly traded securities.

When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offer price in the secondary market on each leg of a round trip (purchase and sale) transaction. In addition, because secondary market transactions occur at market prices, you may pay more than NAV when you buy Shares, and receive less than NAV when you sell those Shares.

Book Entry

Shares are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company (“DTC”) or its nominee is the record owner of all outstanding Shares.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. DTC’s participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book-entry or “street name” through your brokerage account.

Frequent Purchases and Redemptions of Shares

None of the Funds imposes any restrictions on the frequency of purchases and redemptions of Shares. In determining not to approve a written, established policy, the Board evaluated the risks of market timing activities by a Fund’s shareholders. Purchases and redemptions by APs, who are the only parties that may purchase or redeem Shares directly with a Fund, are an essential part of the ETF process and help keep Share trading prices in line with the NAV. As such, the Funds accommodate frequent purchases and redemptions by APs. However, the Board has also determined that frequent purchases and redemptions for cash may increase tracking error and portfolio transaction costs and may lead to the realization of capital gains. To minimize these potential consequences of frequent purchases and redemptions, each Fund employs fair value pricing and may impose transaction fees on purchases and redemptions of Creation Units to cover the custodial and other costs incurred by such Fund in effecting trades. In addition, the Funds and the Adviser reserve the right to reject any purchase order at any time.

Determination of Net Asset Value

Each Fund’s NAV is calculated as of the scheduled close of regular trading on the New York Stock Exchange (“NYSE”), generally 4:00 p.m. Eastern Time, each day the NYSE is open for regular business. The NAV for the Funds is calculated by dividing such Fund’s net assets by its Shares outstanding.

In calculating its NAV, each Fund generally value its assets on the basis of market quotations, last sale prices, or estimates of value furnished by a pricing service or brokers who make markets in such instruments. If such information is not available for a security held by a Fund or is determined to be unreliable, the security will be valued at fair value estimates under guidelines established by the Adviser (as described below).

Fair Value Pricing

The Board has designated the Adviser as the “valuation designee” for each Fund under Rule 2a-5 of the 1940 Act, subject to its oversight. The Adviser has adopted procedures and methodologies, which have been approved by the Board, to fair value Fund investments whose market prices are not “readily available” or are deemed to be unreliable. For example, such circumstances may arise when: (i) an investment has been delisted or has had its trading halted or suspended; (ii) an investment’s primary pricing source is unable or unwilling to provide a price; (iii) an investment’s primary trading market is closed during regular market hours; or (iv) an investment’s value is materially affected by events occurring after the close of the investment’s primary trading market. Generally, when fair valuing an investment, the Adviser will take into account all reasonably available information that may be relevant to a particular valuation including, but not limited to, fundamental analytical data regarding the issuer, information relating to the issuer’s business, recent trades or offers of the investment, general and/or specific market conditions, and the specific facts giving rise to the need to fair value the investment. Fair value determinations are made in good faith and in accordance with the fair value methodologies included in the Adviser’s valuation procedures. The Adviser will fair value Fund investments whose market prices are not “readily available” or are

deemed to be unreliable. Due to the subjective and variable nature of fair value pricing, there can be no assurance that the Adviser will be able to obtain the fair value assigned to the investment upon the sale of such investment.

Delivery of Shareholder Documents – Householding

Householding is an option available to certain investors of the Funds. Householding is a method of delivery, based on the preference of the individual investor, in which a single copy of certain shareholder documents can be delivered to investors who share the same address, even if their accounts are registered under different names. Householding for the Funds is available through certain broker-dealers. If you are interested in enrolling in householding and receiving a single copy of prospectuses and other shareholder documents, please contact your broker-dealer. If you are currently enrolled in householding and wish to change your householding status, please contact your broker-dealer.

DIVIDENDS, DISTRIBUTIONS, AND TAXES

Dividends and Distributions

The Funds intend to pay out dividends and interest income, if any, monthly, and distribute any net realized capital gains to its shareholders at least annually.

The Funds will declare and pay income and capital gain distributions, if any, in cash. Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available. Your broker is responsible for distributing the income and capital gain distributions to you.

Taxes

The following discussion is a summary of some important U.S. federal income tax considerations generally applicable to investments in the Funds. Your investment in a Fund may have other tax implications. Please consult your tax advisor about the tax consequences of an investment in Shares, including the possible application of foreign, state, and local tax laws.

Each Fund intends to qualify each year for treatment as a regulated investment company (a “RIC”) under the Internal Revenue Code of 1986, as amended. If it meets certain minimum distribution requirements, a RIC is not subject to tax at the fund level on income and gains from investments that are timely distributed to shareholders. However, a Fund’s failure to qualify as a RIC or to meet minimum distribution requirements would result (if certain relief provisions were not available) in fund-level taxation and, consequently, a reduction in income available for distribution to shareholders.

Unless your investment in Shares is made through a tax-exempt entity or tax-advantaged account, such as an IRA plan, you need to be aware of the possible tax consequences when a Fund makes distributions, when you sell your Shares listed on the Exchange, and when you purchase or redeem Creation Units (institutional investors only).

The following general discussion of certain U.S. federal income tax consequences is based on provisions of the Code and the regulations issued thereunder as in effect on the date of this SAI. New legislation, as well as administrative changes or court decisions, may significantly change the conclusions expressed herein, and may have a retroactive effect with respect to the transactions contemplated herein.

Taxes on Distributions. Each Fund intends to pay out dividends and interest income, if any, monthly, and distribute any net realized capital gains to its shareholders at least annually. For federal income tax purposes, distributions of net investment income are generally taxable as ordinary income. Taxes on distributions of net capital gains (if any) are determined by how long the Fund owned the investments that generated them, rather than how long a shareholder has owned their Shares. Sales of assets held by a Fund for more than one year generally result in long-term capital gains and losses, and sales of assets held by such Fund for one year or less generally result in short-term capital gains and losses. Distributions of a Fund’s net capital gain (the excess of net long-term capital gains over net short-term capital losses) that are reported by such Fund as capital gain dividends (“Capital Gain Dividends”) will be taxable as long-term capital gains. Distributions of short-term capital gain will generally be taxable as ordinary income. Dividends and distributions are generally taxable to you whether you receive them in cash or reinvest them in additional Shares.

Distributions reported by a Fund as “qualified dividend income” are generally taxed to non-corporate shareholders at rates applicable to long-term capital gains, provided certain holding period and other requirements are met. “Qualified dividend income” generally is income derived from dividends paid by U.S. corporations or certain foreign corporations that are either incorporated in a U.S. possession or eligible for tax benefits under certain U.S. income tax treaties. In addition, dividends that a Fund receives in respect of stock of certain foreign corporations may be qualified dividend income if that stock is readily tradable on an established U.S. securities market. Corporate shareholders may be entitled to a dividends-received deduction for the portion of dividends they receive from a Fund that are attributable to dividends received by such Fund from U.S. corporations, subject to certain limitations. Given the investment strategies of the Funds, it is unlikely that any dividends paid by a Fund will be qualified dividends or be eligible for the corporate dividends paid deduction.

Shortly after the close of each calendar year, you will be informed of the character of any distributions received from a Fund.

In addition to the federal income tax, certain individuals, trusts, and estates may be subject to a Net Investment Income (“NII”) tax of 3.8%. The NII tax is imposed on the lesser of: (i) a taxpayer’s investment income, net of deductions properly allocable to such income; or (ii) the amount by which such taxpayer’s modified adjusted gross income exceeds certain thresholds (\$250,000 for married individuals filing jointly, \$200,000 for unmarried individuals and \$125,000 for married individuals filing separately). Each Fund’s distributions are includable in a shareholder’s investment income for purposes of this NII tax. In addition, any capital gain realized by a shareholder upon a sale or redemption of shares of a Fund is includable in such shareholder’s investment income for purposes of this NII tax.

In general, your distributions are subject to federal income tax for the year in which they are paid. Certain distributions paid in January, however, may be treated as paid on December 31 of the prior year. Distributions are generally taxable even if they are paid from income or gains earned by a Fund before your investment (and thus were included in the Shares’ NAV when you purchased your Shares).

You may wish to avoid investing in a Fund shortly before a dividend or other distribution, because such a distribution will generally be taxable even though it may economically represent a return of a portion of your investment.

If you are neither a resident nor a citizen of the United States or if you are a foreign entity, distributions (other than Capital Gain Dividends) paid to you by a Fund will generally be subject to a U.S. withholding tax at the rate of 30%, unless a lower treaty rate applies. The Funds may, under certain circumstances, report all or a portion of a dividend as an “interest-related dividend” or a “short-term capital gain dividend,” which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met.

Under the Foreign Account Tax Compliance Act (“FATCA”), the Funds may be required to withhold a generally nonrefundable 30% tax on distributions of net taxable income paid to (A) certain “foreign financial institutions” unless such foreign financial institution agrees to verify, monitor, and report to the Internal Revenue Service (“IRS”) the identity of certain of its account-holders, among other items (or unless such entity is otherwise deemed compliant under the terms of an intergovernmental agreement between the United States and the foreign financial institution’s country of residence), and (B) certain “non-financial foreign entities” unless such entity certifies to the Fund that it does not have any substantial U.S. owners or provides the name, address, and taxpayer identification number of each substantial U.S. owner, among other items. This FATCA withholding tax could also affect a Fund’s return on its investments in foreign securities or affect a shareholder’s return if the shareholder holds its Fund shares through a foreign intermediary. You are urged to consult your tax adviser regarding the application of this FATCA withholding tax to your investment in a Fund and the potential certification, compliance, due diligence, reporting, and withholding obligations to which you may become subject in order to avoid this withholding tax.

Each Fund (or a financial intermediary, such as a broker, through which a shareholder owns Shares) generally is required to withhold and remit to the U.S. Treasury a percentage of the taxable distributions and sale or redemption proceeds paid to any shareholder who fails to properly furnish a correct taxpayer identification number, who has underreported dividend or interest income, or who fails to certify that they are not subject to such withholding.

Taxes When Shares are Sold on the Exchange

Any capital gain or loss realized upon a sale of Shares generally is treated as a long-term capital gain or loss if Shares have been held for more than one year and as a short-term capital gain or loss if Shares have been held for one year or less. However, any capital loss on a sale of Shares held for six months or less is treated as long-term capital loss to the extent of Capital Gain Dividends paid with respect to such Shares. Any loss realized on a sale will be disallowed to the extent Shares of a Fund are acquired, including through reinvestment of dividends, within a 61-day period beginning 30 days before and ending 30 days after the sale of substantially identical Shares.

Taxes on Purchases and Redemptions of Creation Units

An AP having the U.S. dollar as its functional currency for U.S. federal income tax purposes who exchanges securities for Creation Units generally recognizes a gain or a loss. The gain or loss will be equal to the difference between the value of the Creation Units at the time of the exchange and the exchanging AP’s aggregate basis in the securities delivered plus the amount of any cash paid for the Creation Units. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanging AP’s basis in the Creation Units and the aggregate U.S. dollar market value of the securities received, plus any cash received for such Creation Units. The IRS may assert, however, that a loss that is realized upon an exchange of securities for Creation Units may not be currently deducted under the rules governing “wash sales” (for an AP who does not mark-to-market their holdings) or on the basis that there has been no significant change in economic position. Persons exchanging securities should consult their own tax advisor with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if Shares comprising the Creation Units have been held for more than one year and as a short-term capital gain or loss if such Shares have been held for one year or less.

The Funds may include a payment of cash in addition to, or in place of, the delivery of a basket of securities upon the redemption of Creation Units. The Funds may sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Funds to recognize investment income and/or capital gains or losses that they might not have recognized if they had completely satisfied the redemption in-kind. As a result, the Funds may be less tax efficient if they include such a cash payment in the proceeds paid upon the redemption of Creation Units.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Funds. It is not a substitute for personal tax advice. You also may be subject to foreign, state and local tax on Fund distributions and sales of Shares. Consult your personal tax advisor about the potential tax consequences of an investment in Shares under all applicable tax laws. For more information, please see the section entitled "Federal Income Taxes" in the SAI.

DISTRIBUTION

Foreside Fund Services, LLC (the "Distributor"), the Funds' distributor, is a broker-dealer registered with the SEC. The Distributor distributes Creation Units for the Fund on an agency basis and does not maintain a secondary market in Shares. The Distributor has no role in determining the policies of the Funds or the securities that are purchased or sold by the Funds. The Distributor's principal address is Three Canal Plaza, Suite 100, Portland, Maine 04101.

The Board has adopted a Distribution (Rule 12b-1) Plan (the "Plan") pursuant to Rule 12b-1 under the 1940 Act. In accordance with the Plan, the Funds are authorized to pay an amount up to 0.25% of its average daily net assets each year to pay distribution fees for the sale and distribution of its Shares.

No Rule 12b-1 fees are currently paid by the Funds, and there are no plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, because the fees are paid out of assets of the respective Fund on an ongoing basis, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

PREMIUM/DISCOUNT INFORMATION

When available, information regarding how often Shares of the Funds traded on the Exchange at a price above (i.e., at a premium) or below (i.e., at a discount) the NAV of such Fund can be found on the Funds' website at www.yieldmaxetfs.com.

ADDITIONAL NOTICES

Shares are not sponsored, endorsed, or promoted by the Exchange. The Exchange is not responsible for, nor has it participated in the determination of, the timing, prices, or quantities of Shares to be issued, nor in the determination or calculation of the equation by which Shares are redeemable. The Exchange has no obligation or liability to owners of Shares in connection with the administration, marketing, or trading of Shares.

Without limiting any of the foregoing, in no event shall the Exchange have any liability for any lost profits or indirect, punitive, special, or consequential damages even if notified of the possibility thereof.

The Adviser, the Sub-Adviser, Lucania, Level, and the Funds make no representation or warranty, express or implied, to the owners of Shares or any member of the public regarding the advisability of investing in securities generally or in any Fund particularly.

The Third Amended and Restated Declaration of Trust ("Declaration of Trust") provides a detailed process for the bringing of derivative or direct actions by shareholders in order to permit legitimate inquiries and claims while avoiding the time, expense, distraction, and other harm that can be caused to a Fund or its shareholders as a result of spurious shareholder demands and derivative actions. Prior to bringing a derivative action, a demand by three unrelated shareholders must first be made on a Fund's Trustees. The Declaration of Trust details various information, certifications, undertakings and acknowledgments that must be included in the demand. Following receipt of the demand, the trustees have a period of 90 days, which may be extended by an additional 60 days, to consider the demand. If a majority of the Trustees who are considered independent for the purposes of considering the demand determine that maintaining the suit would not be in the best interests of the Fund, the Trustees are required to reject the demand and the complaining shareholders may not proceed with the derivative action unless the shareholders are able to sustain the burden of proof to a court that the decision of the Trustees not to pursue the requested action was not a good faith exercise of their business judgment on behalf of the Fund. The Declaration of Trust further provides that shareholders owning Shares representing no less than a majority of a Fund's outstanding shares must join in bringing the derivative action. If a demand is rejected, the complaining shareholders will be responsible for the costs and expenses (including attorneys' fees) incurred by the Fund in connection with the consideration of the demand, if a court determines that the demand was made without reasonable cause or for an improper purpose. If a derivative action is brought in violation of the Declaration of Trust, the shareholders bringing the action may be responsible for the Fund's costs, including attorneys' fees, if a court determines that the action was brought without reasonable cause or for an improper purpose. The Declaration of Trust provides that no shareholder may bring a direct action claiming injury as a shareholder of the Trust, or any Fund, where the matters alleged (if true) would give rise to a claim by the Trust or by the Trust on behalf of a Fund, unless the shareholder has suffered an injury distinct from that suffered by the shareholders of the Trust, or the Fund, generally. Under the Declaration of Trust, a shareholder bringing a direct claim must be a shareholder of the Fund with respect to which the direct action is brought at the time of the injury complained of or

have acquired the shares afterwards by operation of law from a person who was a shareholder at that time. The Declaration of Trust further provides that a Fund shall be responsible for payment of attorneys' fees and legal expenses incurred by a complaining shareholder only if required by law, and any attorneys' fees that the Fund is obligated to pay shall be calculated using reasonable hourly rates. These provisions do not apply to claims brought under the federal securities laws.

The Declaration of Trust also requires that actions by shareholders against a Fund be brought exclusively in a federal or state court located within the State of Delaware. This provision will not apply to claims brought under the federal securities laws. Limiting shareholders' ability to bring actions only in courts located in Delaware may cause shareholders economic hardship to litigate the action in those courts, including paying for traveling expenses of witnesses and counsel, requiring retaining local counsel, and may limit shareholders' ability to bring a claim in a judicial forum that shareholders find favorable for disputes, which may discourage such actions.

FINANCIAL HIGHLIGHTS

This section would ordinarily include Financial Highlights for the Funds. The Financial Highlights tables are intended to help you understand the performance of each Fund for that Fund's periods of operations. Because the Funds have not yet commenced operations as of the date of this Prospectus, no Financial Highlights are shown.

SUMMARY INFORMATION

YieldMax™ Nasdaq 100 0DTE Covered Call Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income. The Fund's secondary objective is to seek capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.02%
Total Annual Fund Operating Expenses	1.01%

(1) The Fund's adviser will pay, all of the Fund's expenses, except for the following: advisory fees, interest charges on any borrowings, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), and litigation expenses, and other non-routine or extraordinary expenses.

(2) Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$103	\$322

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks income and capital appreciation. The Fund seeks to achieve its investment objective by employing a synthetic covered call strategy, designed to generate current income on a weekly basis while also providing exposure to the price return of the Nasdaq 100 index (the "Index") (described more below). In executing this strategy, the Fund will utilize call options that reference the Index or on passively managed ETFs that seek to track the Index's performance ("Index ETFs"). Additionally, the Fund will invest in short-term U.S. Treasury securities and money market funds to enhance income from uninvested cash.

Call Option Strategy

The Fund's synthetic covered call strategy involves a combination of selling and purchasing call options on the Index or on one or more Index ETFs. Each business day, typically at market open or shortly thereafter, the Fund sells out-of-the-money (OTM) call options on the Index (or Index ETFs) with zero days to expiration ("0DTE") meaning these options expire at the end of the same day they are sold. OTM options are those with a strike price above the current value of the Index. The Fund, as the option seller, receives a premium (payment from the buyer) in exchange for the option, which provides income to the Fund. When the Fund sells call options, it receives

a premium, thereby generating income, but limits its potential upside from increases in the market value of the underlying asset to the sum of the option's exercise price and the premium received. Accordingly, the Fund's strategy generates consistent income but caps the Fund's ability to fully participate in market gains above the exercise price.

To establish synthetic long exposure to the Index, the Fund also purchases deep-in-the-money (ITM) call options on the Index (or Index ETFs). Deep-ITM call options are those where the current Index level is substantially above the strike price, providing the Fund with price exposure to the Index's returns, similar to owning the Index's securities directly. This is because Deep-ITM options have a price that moves nearly one-for-one with the Index due to their high intrinsic value, effectively mirroring the Index's performance. This synthetic structure—combining sold call options for income with purchased calls for Index exposure—characterizes the strategy as a “synthetic covered call,” as opposed to a traditional covered call, where a security is owned outright.

Income and Indirect Participation in Index Performance

The Fund's income is primarily generated by selling out-of-the-money ODTE call options on a daily basis. The premium received from these call options contributes to the Fund's income, but this approach may cap the Fund's participation in potential Index gains. Specifically, if the Index appreciates beyond the strike price of the sold call options, the positions will limit the Fund's potential upside, offsetting the gains from its long Index exposure. For example, excluding the premium from the sold call, if the Fund sells call options 1% out-of-the-money and the Index appreciates by 3% on a given day, the Fund's net return will be 1%. This is equal to the 3% gain from its long call exposure, reduced by the 2% loss on its sold call options.

This strategy effectively converts a portion of the potential growth in the Index's price return into current income, balancing income generation with limited exposure to the Index's upside. Conversely, if the Index declines, the premiums earned on sold call options may partially offset losses from the Fund's synthetic long position.

FLEX Options and European-Style Index Options

The Fund's investment in options includes both standard exchange-traded options and FLEXible Exchange® options (“FLEX Options”), which allow for customization of key terms such as strike price, expiration date, and exercise style. Both exchange-traded options and FLEX Options are listed on regulated U.S. exchanges and are guaranteed for settlement by the Options Clearing Corporation (OCC), which mitigates counterparty risk. The options utilized by the Fund are index options and are cash-settled, “European-style” options, meaning they can only be exercised at expiration (in contrast to “American-style” options, which can be exercised at any time before expiration).

Distribution Policy

The Fund will seek to provide weekly income in the form of cash distributions. The Fund will seek to generate such income in the following two ways:

- Writing (selling) call option contracts on the Index (or Index ETFs) as described above.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.

Additional Fund Attributes

The Fund will invest at least 80% of its net assets, plus any borrowings for investment purposes, in ODTE options contracts that use the Index as the reference asset.

The Fund is classified as a “non-diversified” investment company under the 1940 Act, which means that the Fund may invest a high percentage of its assets in a fewer number of issuers.

The Fund's investment exposure will be concentrated in (or substantially exposed to) the same industry or group of industries to the extent the Index is so concentrated.

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

None of the Fund, the Trust, the Adviser, or their respective affiliates makes any representation to you as to the performance of the Index.

THE FUND, TRUST, AND ADVISER ARE NOT AFFILIATED WITH, NOR ENDORSED BY, THE INDEX.

Index Overview: The Nasdaq 100 Index is a benchmark index that includes 100 of the largest non-financial companies listed on the Nasdaq Stock Market, based on market capitalization. This makes it a large-cap index, meaning its constituents have a high market value, often in the billions of dollars.

The Index includes companies from various industries but is heavily weighted towards the technology sector. This reflects the Nasdaq's historic strength as a listing venue for tech companies. Other sectors represented include consumer discretionary, health care, communication services, and industrials, among others.

In terms of volatility, like all stock indices, the Nasdaq 100 experiences daily price movements and can be significantly volatile at times. This is often driven by macroeconomic factors, market sentiment, and financial results or news from its large constituents. Historical periods of significant volatility include the dot-com bubble burst around 2000 and the global financial crisis of 2007-2008, among other events. However, the specific degree of volatility can vary and is subject to change based on market conditions.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which they appear.

Referenced Index Risk. The Fund invests in options contracts that are based on the value of the Index (or in ETFs that track the Index's performance). This subjects the Fund to certain of the same risks as if it owned shares of companies that comprised the Index or an ETF that tracks the Index, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of the Index, the Fund may also be subject to the following risks:

Indirect Investment Risk. The Index is not affiliated with the Trust, the Fund, the Adviser, or their respective affiliates and is not involved with this offering in any way. Investors in the Fund will not have the right to receive dividends or other distributions or any other rights with respect to the companies that comprise the Index but will be subject to declines in the performance of the Index. However, the effect of dividends is indirectly reflected in the Fund's strategy, as dividends paid by the Index's component securities are incorporated into the pricing of the options used for synthetic tracking.

Index Trading Risk. The trading price of the Index may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of companies.

The Nasdaq 100 Index Risks: The Index's major risks stem from its high concentration in the technology sector and significant exposure to high-growth, high-valuation companies. A downturn in the tech industry, whether from regulatory changes, shifts in technology, or competitive pressures, can greatly impact the index. It's also vulnerable to geopolitical risks due to many constituent companies having substantial international operations. Since many of these tech companies often trade at high valuations, a shift in investor sentiment could lead to significant price declines.

Covered Call Strategy Risk. When the Fund sells call options, it receives cash but limits its opportunity to profit from an increase in the market value of the underlying asset to the exercise price (plus the premium received). The maximum potential gain on the underlying asset will be equal to the difference between the exercise price and the purchase price of the reference asset at the time the option is written, plus the premium received. In a rising market, the option may require an underlying asset to be sold at an exercise price that is lower than would be received if the underlying asset was sold at the market price. If a call expires, the Fund realizes a gain in the amount of the premium received, but because there may have been a decline (unrealized loss) in the market value of the reference asset during the option period, the loss realized may exceed such gain. If the underlying asset declines by more than the option premium the Fund receives, there will be a loss on the overall position.

Additionally, because the Fund engages in daily sales of 0DTE options (zero days to expiration), the Fund may experience heightened volatility and rapid loss realization if market movements cause the sold options to be exercised before the end of the day, creating short-term losses that may affect daily returns. By selling out-of-the-money call options, the Fund's upside potential is further limited, as any gains in the Index's value beyond the strike price of the sold calls may result in losses on these positions, reducing potential gains from the Fund's synthetic exposure. While the premiums generated provide income, they may not fully protect against losses if the Index declines significantly. The deep-in-the-money calls used for synthetic exposure may not offer the same performance as directly holding the Index, leading to potential tracking issues where the Fund's returns may diverge from the Index's daily movements.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability,

counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts, including deep-in-the-money ("deep ITM") and 0DTE options, involves investment strategies and risks that differ significantly from those associated with ordinary portfolio securities transactions. Options prices are highly volatile and influenced by multiple factors, including changes in the value of the underlying index or instrument, actual or implied volatility, time remaining until expiration, interest rates, fiscal and monetary policies, and national and international political or economic events. For the Fund, the value of the options contracts in which it invests is substantially influenced by the value of the Index and the unique characteristics of deep ITM and 0DTE options. While deep ITM options generally have a high delta, meaning their value moves almost in tandem with the underlying Index, prior to expiration, their price may not fully replicate the rate of change of the underlying instrument, leading to tracking differences. Additionally, 0DTE options are particularly sensitive to intraday price movements and volatility, which can exacerbate price swings and increase the risk of loss.

The Fund may experience substantial downside risk from certain options positions, including the potential for purchased options to expire worthless, resulting in the loss of premiums paid. Additionally, selling (writing) options exposes the Fund to significant risks that can exceed the premiums received. When writing call options, the Fund faces the risk of unlimited losses if the Index rises significantly, as it may be required to pay the difference between the strike price and the higher market value of the Index. Conversely, writing put options can lead to substantial losses if the Index declines significantly, as the Fund may be obligated to pay the difference between the strike price and the lower market value of the Index. These risks are heightened with 0DTE options, as their sensitivity to intraday price movements and volatility can lead to sudden and extreme losses within a single trading day.

The Fund may also encounter challenges in managing written options positions, particularly in volatile or illiquid markets, where closing or adjusting positions may be difficult or costly. Additionally, the process of rolling options positions—replacing expiring options with new contracts to maintain exposure—can involve significant transaction costs and expose the Fund to additional risks, such as adverse price movements during the roll period or reduced liquidity in the desired contracts. The Fund may also face margin requirements associated with written options, which could require the Fund to liquidate other assets to meet these obligations, potentially at unfavorable prices. Collectively, these risks may result in significant losses or reduced investment efficiency for the Fund.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current weekly income. There is no assurance that the Fund will make a distribution in any given week. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, weekly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date (i.e., the date on which one needs to own a dividend-paying stock in order to receive the

upcoming dividend payment). The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Equity Market Risk. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from specific issuers. The equity securities held in the Fund's portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, or sectors in which the Fund invests. Common stocks, such as those held by the Fund, are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.

Concentration Risk. The Fund's investment exposure will be concentrated in (or substantially exposed to) the same industry or group of industries to the extent the Index is so concentrated. In such event, the value of Shares may rise and fall more than the value of shares that invest in securities of companies in a broader range of industries.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Buying or selling Shares involves certain costs, including brokerage commissions, other charges imposed by brokers, and bid-ask spreads. The bid-ask spread represents the difference between the price at which an investor is willing to buy Shares and the price at which an investor is willing to sell Shares. The spread varies over time based on the Shares' trading volume and market liquidity. The spread is generally lower if Shares have more trading volume and market liquidity and higher if Shares have little trading volume and market liquidity. Due to the costs of buying or selling Shares, frequent trading of Shares may reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as The Nasdaq Stock Market, LLC. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

General Market Risk. Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. Securities in the Fund's portfolio may underperform in comparison to securities in the general financial markets, a particular financial market, or other asset classes, due to a number of factors, including inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters or events, pandemic diseases, terrorism, regulatory events, and government controls.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Market Capitalization Risk.

Large-Capitalization Investing. The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund, Adviser, seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

When available, information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

The Fund's income is primarily derived from its covered call strategy and the frequent trading of ODTE options, which typically generates short-term capital gains. These gains are treated as ordinary income for tax purposes and are taxed at the investor's marginal tax rate. When the Fund uses options that qualify as Section 1256 contracts, such as broad-based index options, the Fund's distributions may benefit from a 60 percent long-term and 40 percent short-term treatment. This can lead to more favorable tax outcomes for Fund investors compared to funds using options on single stocks or ETFs. The Fund's strategy is not expected to produce qualified dividend income, as the Fund does not directly hold the underlying securities of the index.

Distributions on investments made through tax-deferred arrangements such as IRAs, 401(k)s, or other retirement accounts will not be subject to immediate taxation but may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

SUMMARY INFORMATION

YieldMax™ S&P 500 0DTE Covered Call Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income. The Fund's secondary objective is to seek capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.02%
Total Annual Fund Operating Expenses	1.01%

⁽¹⁾ The Fund's adviser will pay, all of the Fund's expenses, except for the following: advisory fees, interest charges on any borrowings, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), and litigation expenses, and other non-routine or extraordinary expenses.

⁽²⁾ Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$103	\$322

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks income and capital appreciation. The Fund seeks to achieve its investment objective by employing a synthetic covered call strategy, designed to generate current income on a weekly basis while also providing exposure to the price return of the S&P 500 Index (the "Index") (described more below). In executing this strategy, the Fund will utilize call options that reference the Index or on passively managed ETFs that seek to track the Index's performance ("Index ETFs"). Additionally, the Fund will invest in short-term U.S. Treasury securities and money market funds to enhance income from uninvested cash.

Call Option Strategy

The Fund's synthetic covered call strategy involves a combination of selling and purchasing call options on the Index or on one or more Index ETFs. Each business day, typically at market open or shortly thereafter, the Fund sells out-of-the-money (OTM) call options on the Index (or Index ETFs) with zero days to expiration ("0DTE") meaning these options expire at the end of the same day they are sold. OTM options are those with a strike price above the current value of the Index. The Fund, as the option seller, receives a premium (payment from the buyer) in exchange for the option, which provides income to the Fund. When the Fund sells call options, it receives a premium, thereby generating income, but limits its potential upside from increases in the market value of the underlying asset to the

sum of the option's exercise price and the premium received. Accordingly, the Fund's strategy generates consistent income but caps the Fund's ability to fully participate in market gains above the exercise price.

To establish synthetic long exposure to the Index, the Fund also purchases deep-in-the-money (ITM) call options on the Index (or Index ETFs). Deep-ITM call options are those where the current Index level is substantially above the strike price, providing the Fund with price exposure to the Index's returns, similar to owning the Index's securities directly. This is because Deep-ITM options have a price that moves nearly one-for-one with the Index due to their high intrinsic value, effectively mirroring the Index's performance. This synthetic structure—combining sold call options for income with purchased calls for Index exposure—characterizes the strategy as a “synthetic covered call,” as opposed to a traditional covered call, where a security is owned outright.

Income and Indirect Participation in Index Performance

The Fund's income is primarily generated by selling out-of-the-money ODTE call options on a daily basis. The premium received from these call options contributes to the Fund's income, but this approach may cap the Fund's participation in potential Index gains. Specifically, if the Index appreciates beyond the strike price of the sold call options, the positions will limit the Fund's potential upside, offsetting the gains from its long Index exposure. For example, excluding the premium from the sold call, if the Fund sells call options 1% out-of-the-money and the Index appreciates by 3% on a given day, the Fund's net return will be 1%. This is equal to the 3% gain from its long call exposure, reduced by the 2% loss on its sold call options.

This strategy effectively converts a portion of the potential growth in the Index's price return into current income, balancing income generation with limited exposure to the Index's upside. Conversely, if the Index declines, the premiums earned on sold call options may partially offset losses from the Fund's synthetic long position.

FLEX Options and European-Style Index Options

The Fund's investment in options includes both standard exchange-traded options and FLEXible Exchange[®] options (“FLEX Options”), which allow for customization of key terms such as strike price, expiration date, and exercise style. Both exchange-traded options and FLEX Options are listed on regulated U.S. exchanges and are guaranteed for settlement by the Options Clearing Corporation (OCC), which mitigates counterparty risk. The options utilized by the Fund are index options and are cash-settled, “European-style” options, meaning they can only be exercised at expiration (in contrast to “American-style” options, which can be exercised at any time before expiration).

Distribution Policy

The Fund will seek to provide weekly income in the form of cash distributions. The Fund will seek to generate such income in the following two ways:

- Writing (selling) call option contracts on the Index (or Index ETFs) as described above.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.

Additional Fund Attributes

The Fund will invest at least 80% of its net assets, plus any borrowings for investment purposes, in ODTE options contracts that use the Index as the reference asset.

The Fund is classified as a “non-diversified” investment company under the 1940 Act, which means that the Fund may invest a high percentage of its assets in a fewer number of issuers.

The Fund's investment exposure will be concentrated in (or substantially exposed to) the same industry or group of industries to the extent the Index is so concentrated.

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

None of the Fund, the Trust, the Adviser, or their respective affiliates makes any representation to you as to the performance of the Index.

THE FUND, TRUST, AND ADVISER ARE NOT AFFILIATED WITH, NOR ENDORSED BY, THE INDEX.

Index Overview: The S&P 500 Index is a widely recognized benchmark index that tracks the performance of 500 of the largest U.S.-based companies listed on the New York Stock Exchange or Nasdaq. These companies represent approximately 80% of the total U.S. equities market by capitalization, making it a large-cap index.

The S&P 500 is diversified across all sectors of the economy, including technology, healthcare, consumer discretionary, financials, industrials, and others. This distribution can vary over time as the market value of the sectors change.

Regarding volatility, the S&P 500, like all market indices, has experienced periods of significant daily price movements. Historically notable periods of volatility include the Black Monday crash in 1987, the dot-com bubble burst around 2000, the financial crisis of 2008, and the market reactions to the COVID-19 pandemic in early 2020. However, the specific degree of volatility can vary and is subject to change based on overall market conditions. Despite these periods of volatility, the S&P 500 has shown long-term growth over its history.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which they appear.

Referenced Index Risk. The Fund invests in options contracts that are based on the value of the Index (or in ETFs that track the Index's performance). This subjects the Fund to certain of the same risks as if it owned shares of companies that comprised the Index or an ETF that tracks the Index, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of the Index, the Fund may also be subject to the following risks:

Indirect Investment Risk. The Index is not affiliated with the Trust, the Fund, the Adviser, or their respective affiliates and is not involved with this offering in any way. Investors in the Fund will not have the right to receive dividends or other distributions or any other rights with respect to the companies that comprise the Index but will be subject to declines in the performance of the Index. However, the effect of dividends is indirectly reflected in the Fund's strategy, as dividends paid by the Index's component securities are incorporated into the pricing of the options used for synthetic tracking.

Index Trading Risk. The trading price of the Index may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of companies.

S&P 500 Index Risks: The Index, which includes a broad swath of large U.S. companies, is primarily exposed to overall economic and market conditions. Recession, inflation, and changes in interest rates can significantly impact the index's performance. Furthermore, despite its diverse representation, a downturn in a major sector such as technology or financials could notably affect the index. Geopolitical risks and unexpected global events, like pandemics, can introduce volatility and uncertainty.

Covered Call Strategy Risk. When the Fund sells call options, it receives cash but limits its opportunity to profit from an increase in the market value of the underlying asset to the exercise price (plus the premium received). The maximum potential gain on the underlying asset will be equal to the difference between the exercise price and the purchase price of the reference asset at the time the option is written, plus the premium received. In a rising market, the option may require an underlying asset to be sold at an exercise price that is lower than would be received if the underlying asset was sold at the market price. If a call expires, the Fund realizes a gain in the amount of the premium received, but because there may have been a decline (unrealized loss) in the market value of the reference asset during the option period, the loss realized may exceed such gain. If the underlying asset declines by more than the option premium the Fund receives, there will be a loss on the overall position.

Additionally, because the Fund engages in daily sales of 0DTE options (zero days to expiration), the Fund may experience heightened volatility and rapid loss realization if market movements cause the sold options to be exercised before the end of the day, creating short-term losses that may affect daily returns. By selling out-of-the-money call options, the Fund's upside potential is further limited, as any gains in the Index's value beyond the strike price of the sold calls may result in losses on these positions, reducing potential gains from the Fund's synthetic exposure. While the premiums generated provide income, they may not fully protect against losses if the Index declines significantly. The deep-in-the-money calls used for synthetic exposure may not offer the same performance as directly holding the Index, leading to potential tracking issues where the Fund's returns may diverge from the Index's daily movements.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves

investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts, including deep-in-the-money ("deep ITM") and 0DTE options, involves investment strategies and risks that differ significantly from those associated with ordinary portfolio securities transactions. Options prices are highly volatile and influenced by multiple factors, including changes in the value of the underlying index or instrument, actual or implied volatility, time remaining until expiration, interest rates, fiscal and monetary policies, and national and international political or economic events. For the Fund, the value of the options contracts in which it invests is substantially influenced by the value of the Index and the unique characteristics of deep ITM and 0DTE options. While deep ITM options generally have a high delta, meaning their value moves almost in tandem with the underlying Index, prior to expiration, their price may not fully replicate the rate of change of the underlying instrument, leading to tracking differences. Additionally, 0DTE options are particularly sensitive to intraday price movements and volatility, which can exacerbate price swings and increase the risk of loss.

The Fund may experience substantial downside risk from certain options positions, including the potential for purchased options to expire worthless, resulting in the loss of premiums paid. Additionally, selling (writing) options exposes the Fund to significant risks that can exceed the premiums received. When writing call options, the Fund faces the risk of unlimited losses if the Index rises significantly, as it may be required to pay the difference between the strike price and the higher market value of the Index. Conversely, writing put options can lead to substantial losses if the Index declines significantly, as the Fund may be obligated to pay the difference between the strike price and the lower market value of the Index. These risks are heightened with 0DTE options, as their sensitivity to intraday price movements and volatility can lead to sudden and extreme losses within a single trading day.

The Fund may also encounter challenges in managing written options positions, particularly in volatile or illiquid markets, where closing or adjusting positions may be difficult or costly. Additionally, the process of rolling options positions—replacing expiring options with new contracts to maintain exposure—can involve significant transaction costs and expose the Fund to additional risks, such as adverse price movements during the roll period or reduced liquidity in the desired contracts. The Fund may also face margin requirements associated with written options, which could require the Fund to liquidate other assets to meet these obligations, potentially at unfavorable prices. Collectively, these risks may result in significant losses or reduced investment efficiency for the Fund.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current weekly income. There is no assurance that the Fund will make a distribution in any given week. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, weekly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date (i.e., the date on which one needs to own a dividend-paying stock in order to receive the upcoming dividend payment). The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Equity Market Risk. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from specific issuers. The equity securities held in the Fund's portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, or sectors in which the Fund invests. Common stocks, such as those held by the Fund, are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.

Concentration Risk. The Fund's investment exposure will be concentrated in (or substantially exposed to) the same industry or group of industries to the extent the Index is so concentrated. In such event, the value of Shares may rise and fall more than the value of shares that invest in securities of companies in a broader range of industries.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as The Nasdaq Stock Market, LLC. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

General Market Risk. Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. Securities in the Fund's portfolio may underperform in comparison to securities in the general financial markets, a particular financial market, or other asset classes, due to a number of factors, including inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters or events, pandemic diseases, terrorism, regulatory events, and government controls.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Market Capitalization Risk.

Large-Capitalization Investing. The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund, Adviser, seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

When available, information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

The Fund's income is primarily derived from its covered call strategy and the frequent trading of 0DTE options, which typically generates short-term capital gains. These gains are treated as ordinary income for tax purposes and are taxed at the investor's marginal tax rate. When the Fund uses options that qualify as Section 1256 contracts, such as broad-based index options, the Fund's distributions may benefit from a 60 percent long-term and 40 percent short-term treatment. This can lead to more favorable tax outcomes for Fund investors compared to funds using options on single stocks or ETFs. The Fund's strategy is not expected to produce qualified dividend income, as the Fund does not directly hold the underlying securities of the index.

Distributions on investments made through tax-deferred arrangements such as IRAs, 401(k)s, or other retirement accounts will not be subject to immediate taxation but may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

SUMMARY INFORMATION

YieldMax™ Russell 2000 0DTE Covered Call Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income. The Fund's secondary objective is to seek capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.02%
Total Annual Fund Operating Expenses	1.01%

⁽¹⁾ The Fund's adviser will pay, all of the Fund's expenses, except for the following: advisory fees interest charges on any borrowings, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), and litigation expenses, and other non-routine or extraordinary expenses.

⁽²⁾ Based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$103	\$322

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks income and capital appreciation. The Fund seeks to achieve its investment objective by employing a synthetic covered call strategy, designed to generate current income on a weekly basis while also providing exposure to the price return of the Russell 2000 Index (the "Index") (described more below). In executing this strategy, the Fund will utilize call options that reference the Index or on passively managed ETFs that seek to track the Index's performance ("Index ETFs"). Additionally, the Fund will invest in short-term U.S. Treasury securities and money market funds to enhance income from uninvested cash.

Call Option Strategy

The Fund's synthetic covered call strategy involves a combination of selling and purchasing call options on the Index or on one or more Index ETFs. Each business day, typically at market open or shortly thereafter, the Fund sells out-of-the-money (OTM) call options on the Index (or Index ETFs) with zero days to expiration ("0DTE") meaning these options expire at the end of the same day they are sold. OTM options are those with a strike price above the current value of the Index. The Fund, as the option seller, receives a premium (payment from the buyer) in exchange for the option, which provides income to the Fund. When the Fund sells call options, it receives a premium, thereby generating income, but limits its potential upside from increases in the market value of the underlying asset to the

sum of the option's exercise price and the premium received. Accordingly, the Fund's strategy generates consistent income but caps the Fund's ability to fully participate in market gains above the exercise price.

To establish synthetic long exposure to the Index, the Fund also purchases deep-in-the-money (ITM) call options on the Index (or Index ETFs). Deep-ITM call options are those where the current Index level is substantially above the strike price, providing the Fund with price exposure to the Index's returns, similar to owning the Index's securities directly. This is because Deep-ITM options have a price that moves nearly one-for-one with the Index due to their high intrinsic value, effectively mirroring the Index's performance. This synthetic structure—combining sold call options for income with purchased calls for Index exposure—characterizes the strategy as a “synthetic covered call,” as opposed to a traditional covered call, where a security is owned outright.

Income and Indirect Participation in Index Performance

The Fund's income is primarily generated by selling out-of-the-money ODTE call options on a daily basis. The premium received from these call options contributes to the Fund's income, but this approach may cap the Fund's participation in potential Index gains. Specifically, if the Index appreciates beyond the strike price of the sold call options, the positions will limit the Fund's potential upside, offsetting the gains from its long Index exposure. For example, excluding the premium from the sold call, if the Fund sells call options 1% out-of-the-money and the Index appreciates by 3% on a given day, the Fund's net return will be 1%. This is equal to the 3% gain from its long call exposure, reduced by the 2% loss on its sold call options.

This strategy effectively converts a portion of the potential growth in the Index's price return into current income, balancing income generation with limited exposure to the Index's upside. Conversely, if the Index declines, the premiums earned on sold call options may partially offset losses from the Fund's synthetic long position.

FLEX Options and European-Style Index Options

The Fund's investment in options includes both standard exchange-traded options and FLEXible Exchange® options (“FLEX Options”), which allow for customization of key terms such as strike price, expiration date, and exercise style. Both exchange-traded options and FLEX Options are listed on regulated U.S. exchanges and are guaranteed for settlement by the Options Clearing Corporation (OCC), which mitigates counterparty risk. The options utilized by the Fund are index options and are cash-settled, “European-style” options, meaning they can only be exercised at expiration (in contrast to “American-style” options, which can be exercised at any time before expiration).

Distribution Policy

The Fund will seek to provide weekly income in the form of cash distributions. The Fund will seek to generate such income in the following two ways:

- Writing (selling) call option contracts on the Index (or Index ETFs) as described above.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.

Additional Fund Attributes

The Fund will invest at least 80% of its net assets, plus any borrowings for investment purposes, in ODTE options contracts that use the Index as the reference asset.

The Fund is classified as a “non-diversified” investment company under the 1940 Act, which means that the Fund may invest a high percentage of its assets in a fewer number of issuers.

The Fund's investment exposure will be concentrated in (or substantially exposed to) the same industry or group of industries to the extent the Index is so concentrated.

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

None of the Fund, the Trust, the Adviser, or their respective affiliates makes any representation to you as to the performance of the Index.

THE FUND, TRUST AND ADVISER, ARE NOT AFFILIATED WITH, NOR ENDORSED BY, THE INDEX.

Index Overview: The Russell 2000 Index is a widely recognized benchmark index that tracks the performance of approximately 2000 small-cap companies in the United States. These are the smallest companies listed in the Russell 3000 Index, representing about 10% of that index's total market capitalization.

The Russell 2000 is diversified and includes companies from various sectors such as financial services, healthcare, technology, consumer discretionary, industrials, and others. The exact distribution can fluctuate over time due to market conditions.

In terms of volatility, the Russell 2000, being a small-cap index, tends to be more volatile than large-cap indices like the S&P 500 or the Nasdaq 100. Small-cap stocks can be more sensitive to changes in the economic climate and can experience larger price swings. Notable periods of volatility have included the dot-com bubble burst in 2000, the financial crisis in 2008, and the market turmoil caused by the COVID-19 pandemic in 2020. However, as with any index, the specific level of volatility can change based on broader market conditions.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which they appear.

Referenced Index Risk. The Fund invests in options contracts that are based on the value of the Index (or in ETFs that track the Index's performance). This subjects the Fund to certain of the same risks as if it owned shares of companies that comprised the Index or an ETF that tracks the Index, even though it does not. By virtue of the Fund's investments in options contracts that are based on the value of the Index, the Fund may also be subject to the following risks:

Indirect Investment Risk. The Index is not affiliated with the Trust, the Fund, the Adviser, or their respective affiliates and is not involved with this offering in any way. Investors in the Fund will not have the right to receive dividends or other distributions or any other rights with respect to the companies that comprise the Index but will be subject to declines in the performance of the Index. However, the effect of dividends is indirectly reflected in the Fund's strategy, as dividends paid by the Index's component securities are incorporated into the pricing of the options used for synthetic tracking.

Index Trading Risk. The trading price of the Index may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of companies.

Russell 2000 Index Risks: The Index, which consists of small-cap U.S. companies, is particularly susceptible to economic changes, as these firms often have less financial resilience than larger companies. Market volatility can disproportionately affect these smaller businesses, leading to significant price swings. Additionally, these companies are often more exposed to specific industry risks and have less diverse revenue streams. They can also be more vulnerable to changes in domestic regulatory or policy environments.

Covered Call Strategy Risk. When the Fund sells call options, it receives cash but limits its opportunity to profit from an increase in the market value of the underlying asset to the exercise price (plus the premium received). The maximum potential gain on the underlying asset will be equal to the difference between the exercise price and the purchase price of the reference asset at the time the option is written, plus the premium received. In a rising market, the option may require an underlying asset to be sold at an exercise price that is lower than would be received if the underlying asset was sold at the market price. If a call expires, the Fund realizes a gain in the amount of the premium received, but because there may have been a decline (unrealized loss) in the market value of the reference asset during the option period, the loss realized may exceed such gain. If the underlying asset declines by more than the option premium the Fund receives, there will be a loss on the overall position.

Additionally, because the Fund engages in daily sales of 0DTE options (zero days to expiration), the Fund may experience heightened volatility and rapid loss realization if market movements cause the sold options to be exercised before the end of the day, creating short-term losses that may affect daily returns. By selling out-of-the-money call options, the Fund's upside potential is further limited, as any gains in the Index's value beyond the strike price of the sold calls may result in losses on these positions, reducing potential gains from the Fund's synthetic exposure. While the premiums generated provide income, they may not fully protect against losses if the Index declines significantly. The deep-in-the-money calls used for synthetic exposure may not offer the same performance as directly holding the Index, leading to potential tracking issues where the Fund's returns may diverge from the Index's daily movements.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability,

counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the value of the Underlying Security and the derivative, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts, including deep-in-the-money ("deep ITM") and 0DTE options, involves investment strategies and risks that differ significantly from those associated with ordinary portfolio securities transactions. Options prices are highly volatile and influenced by multiple factors, including changes in the value of the underlying index or instrument, actual or implied volatility, time remaining until expiration, interest rates, fiscal and monetary policies, and national and international political or economic events. For the Fund, the value of the options contracts in which it invests is substantially influenced by the value of the Index and the unique characteristics of deep ITM and 0DTE options. While deep ITM options generally have a high delta, meaning their value moves almost in tandem with the underlying Index, prior to expiration, their price may not fully replicate the rate of change of the underlying instrument, leading to tracking differences. Additionally, 0DTE options are particularly sensitive to intraday price movements and volatility, which can exacerbate price swings and increase the risk of loss.

The Fund may experience substantial downside risk from certain options positions, including the potential for purchased options to expire worthless, resulting in the loss of premiums paid. Additionally, selling (writing) options exposes the Fund to significant risks that can exceed the premiums received. When writing call options, the Fund faces the risk of unlimited losses if the Index rises significantly, as it may be required to pay the difference between the strike price and the higher market value of the Index. Conversely, writing put options can lead to substantial losses if the Index declines significantly, as the Fund may be obligated to pay the difference between the strike price and the lower market value of the Index. These risks are heightened with 0DTE options, as their sensitivity to intraday price movements and volatility can lead to sudden and extreme losses within a single trading day.

The Fund may also encounter challenges in managing written options positions, particularly in volatile or illiquid markets, where closing or adjusting positions may be difficult or costly. Additionally, the process of rolling options positions—replacing expiring options with new contracts to maintain exposure—can involve significant transaction costs and expose the Fund to additional risks, such as adverse price movements during the roll period or reduced liquidity in the desired contracts. The Fund may also face margin requirements associated with written options, which could require the Fund to liquidate other assets to meet these obligations, potentially at unfavorable prices. Collectively, these risks may result in significant losses or reduced investment efficiency for the Fund.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current weekly income. There is no assurance that the Fund will make a distribution in any given week. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, weekly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date (i.e., the date on which one needs to own a dividend-paying stock in order to receive the

upcoming dividend payment). The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Equity Market Risk. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from specific issuers. The equity securities held in the Fund's portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, or sectors in which the Fund invests. Common stocks, such as those held by the Fund, are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.

Concentration Risk. The Fund's investment exposure will be concentrated in (or substantially exposed to) the same industry or group of industries to the extent the Index is so concentrated. In such event, the value of Shares may rise and fall more than the value of shares that invest in securities of companies in a broader range of industries.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as The Nasdaq Stock Market, LLC. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

General Market Risk. Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. Securities in the Fund's portfolio may underperform in comparison to securities in the general financial markets, a particular financial market, or other asset classes, due to a number of factors, including inflation (or expectations for inflation), interest rates,

global demand for particular products or resources, natural disasters or events, pandemic diseases, terrorism, regulatory events, and government controls.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Market Capitalization Risk.

Small-Capitalization Investing. The securities of small-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large- or mid-capitalization companies. The securities of small-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large- or mid-capitalization stocks or the stock market as a whole. Some small capitalization companies have limited product lines, markets, financial resources, and management personnel and tend to concentrate on fewer geographical markets relative to mid- and large-capitalization companies. There is typically less publicly available information concerning smaller-capitalization companies than for larger, more established companies.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund, Adviser, seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S.

Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrichelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Qiao Duan, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (APs) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

When available, information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

The Fund's income is primarily derived from its covered call strategy and the frequent trading of ODTE options, which typically generates short-term capital gains. These gains are treated as ordinary income for tax purposes and are taxed at the investor's marginal tax rate. When the Fund uses options that qualify as Section 1256 contracts, such as broad-based index options, the Fund's distributions may benefit from a 60 percent long-term and 40 percent short-term treatment. This can lead to more favorable tax outcomes for Fund investors compared to funds using options on single stocks or ETFs. The Fund's strategy is not expected to produce qualified dividend income, as the Fund does not directly hold the underlying securities of the index.

Distributions on investments made through tax-deferred arrangements such as IRAs, 401(k)s, or other retirement accounts will not be subject to immediate taxation but may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing,

educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information

ADDITIONAL INFORMATION ABOUT THE FUNDS

Investment Objective

Each Fund's primary investment objective is to seek current income. Further, each Fund has a secondary objective to seek capital appreciation.

An investment objective is fundamental if it cannot be changed without the consent of the holders of a majority of the outstanding Shares. No Fund's investment objective has been adopted as a fundamental investment policy and therefore each Fund's investment objective may be changed without the consent of that Fund's shareholders upon approval by the Board of Trustees (the "Board") of Tidal Trust II (the "Trust") and at least 60 days' written notice to shareholders.

Principal Investment Strategies

Each Fund has an 80% policy to invest at least 80% of its net assets, plus any borrowings for investment purposes, in 0DTE options contracts that use its Index as the reference asset.

For each Fund's 80% test, the notional value of its options contracts will be used. "Notional value" refers to the "face" value of a Fund investment, rather than the amount of capital the Fund has actually committed. It represents the total value of the Fund's position, rather than its equity in that position. Essentially, it reflects the full value of a leveraged position in the market, even if the Fund uses a fraction of that amount as collateral.

Each Fund's 80% policy is non-fundamental and can be changed without shareholder approval. However, Fund shareholders would be given at least 60 days' notice prior to any such change.

Each Fund utilizes 0DTE options to generate income by leveraging their rapid time decay, which accelerates significantly as expiration approaches. This characteristic enables the Fund to seek to collect premium income within a short timeframe, providing a potentially consistent and predictable return profile. As 0DTE options experience the greatest erosion of extrinsic value in their final trading hours, they tend to offer an opportunity to maximize income potential while maintaining a high turnover rate.

The short lifespan of these options aligns well with each Fund's objective of generating income, as it enables frequent reinvestment and flexibility in adapting to evolving market conditions. Additionally, the high liquidity and tight spreads of index-based 0DTE options support efficient execution, further optimizing income potential.

However, 0DTE options expire daily, requiring each Fund to roll positions frequently to maintain exposure. This high turnover increases transaction costs, need for daily rolling due to their expiration. As well as high gamma sensitivity, meaning 0DTE options are highly sensitive to small price movements, especially as expiration approaches. While this amplifies gains when movements are favorable, it also increases the risk of significant losses during volatile intraday market conditions, which makes them highly reactive in volatile markets. Compared to longer-dated options, 0DTE contracts are more responsive to short-term market dynamics and income generation but demand higher trading frequency and carry greater susceptibility to gamma risk.

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Manager of Managers Structure

The Funds and the Adviser have received exemptive relief from the SEC permitting the Adviser (subject to certain conditions and the approval of the Board) to change or select new unaffiliated sub-advisers without obtaining shareholder approval. The relief also permits the Adviser to materially amend the terms of agreements with an unaffiliated sub-adviser (including an increase in the fee paid by the Adviser to the unaffiliated sub-adviser (and not paid by the Fund)) or to continue the employment of an unaffiliated sub-adviser after an event that would otherwise cause the automatic termination of services with Board approval, but without shareholder approval. Shareholders will be notified of any unaffiliated sub-adviser changes. The Adviser has the ultimate responsibility, subject to oversight by the Board, to oversee a sub-adviser and recommend their hiring, termination and replacement.

Investments by Registered Investment Companies

Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies. However, registered investment companies are permitted to invest in other investment companies beyond the limits set forth in Section 12(d)(1) in rules under the 1940 Act, subject to certain conditions. The Fund may rely on Rule 12d1-4 of the 1940 Act, which provides an exemption from Section 12(d)(1) that allows the Fund to invest beyond the limits set forth in Section 12(d)(1) if the Fund satisfies certain conditions specified in Rule 12d1-4, including, among other conditions, that the Fund and its advisory group will not control

(individually or in the aggregate) an acquired fund (e.g., hold more than 25% of the outstanding voting securities of an acquired fund that is a registered open-end management investment company).

Principal Risks of Investing in the Funds

The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a “principal risk” of investing in the Funds, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in a Fund. Some or all of these risks may adversely affect a Fund’s NAV per share, trading price, yield, total return and/or ability to meet its investment objective. The following risks could affect the value of your performance in the Funds: The risks below apply to each Fund as indicated in the following table. Additional information about each such risk and its potential impact on a Fund is set forth below the table.

Concentration Risk. The Fund’s investment exposure will be concentrated in (or substantially exposed to) the same industry or group of industries to the extent the Index is so concentrated. In such event, the value of Shares may rise and fall more than the value of shares that invest in securities of companies in a broader range of industries.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared (“cleared derivatives”). In a transaction involving cleared derivatives, the Fund’s counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house (“clearing members”) can participate directly in the clearing house, the Fund will hold cleared

derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Covered Call Strategy Risk. When the Fund sells call options, it receives cash but limits its opportunity to profit from an increase in the market value of the underlying asset to the exercise price (plus the premium received). The maximum potential gain on the underlying asset will be equal to the difference between the exercise price and the purchase price of the reference asset at the time the option is written, plus the premium received. In a rising market, the option may require an underlying asset to be sold at an exercise price that is lower than would be received if the underlying asset was sold at the market price. If a call expires, the Fund realizes a gain in the amount of the premium received, but because there may have been a decline (unrealized loss) in the market value of the reference asset during the option period, the loss realized may exceed such gain. If the underlying asset declines by more than the option premium the Fund receives, there will be a loss on the overall position.

Additionally, because the Fund engages in daily sales of 0DTE options (zero days to expiration), the Fund may experience heightened volatility and rapid loss realization if market movements cause the sold options to be exercised before the end of the day, creating short-term losses that may affect daily returns. By selling out-of-the-money call options, the Fund's upside potential is further limited, as any gains in the Index's value beyond the strike price of the sold calls may result in losses on these positions, reducing potential gains from the Fund's synthetic exposure. While the premiums generated provide income, they may not fully protect against losses if the Index declines significantly. The deep-in-the-money calls used for synthetic exposure may not offer the same performance as directly holding the Index, leading to potential tracking issues where the Fund's returns may diverge from the Index's daily movements.

Derivatives Risk. The Funds' derivative investments have risks, including the imperfect correlation between the value of such instruments and the underlying assets; the loss of principal, including the potential loss of amounts greater than the initial amount invested in the derivative instrument; the possible default of the other party to the transaction; and illiquidity of the derivative investments. Use of derivatives could also result in a loss if the counterparty to the transaction does not perform as promised, including because of such counterparty's bankruptcy or insolvency. This risk may be greater during volatile market conditions. Other risks include the inability to close out a position because the trading market becomes illiquid (particularly in the OTC markets) or the availability of counterparties becomes limited for a period of time. In addition, the presence of speculators in a particular market could lead to price distortions.

Certain of the Funds' transactions in derivatives could also affect the amount, timing, and character of distributions to shareholders, which may result in a Fund realizing more short-term capital gain and ordinary income subject to tax at ordinary income tax rates than it would if it did not engage in such transactions, which may adversely impact such Fund's after-tax returns.

In addition, each Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts, including deep-in-the-money ("deep ITM") and 0DTE options, involves investment strategies and risks that differ significantly from those associated with ordinary portfolio securities transactions. Options prices are highly volatile and influenced by multiple factors, including changes in the value of the underlying index or instrument, actual or implied volatility, time remaining until expiration, interest rates, fiscal and monetary policies, and national and international political or economic events. For the Fund, the value of the options contracts in which it invests is substantially influenced by the value of the Index and the unique characteristics of deep ITM and 0DTE options. While deep ITM options generally have a high delta, meaning their value moves almost in tandem with the underlying Index, prior to expiration, their price may not fully replicate the rate of change of the underlying instrument, leading to tracking differences. Additionally, 0DTE options are particularly sensitive to intraday price movements and volatility, which can exacerbate price swings and increase the risk of loss.

The Fund may experience substantial downside risk from certain options positions, including the potential for purchased options to expire worthless, resulting in the loss of premiums paid. Additionally, selling (writing) options exposes the Fund to significant risks that can exceed the premiums received. When writing call options, the Fund faces the risk of unlimited losses if the Index rises significantly, as it may be required to pay the difference between the strike price and the higher market value

of the Index. Conversely, writing put options can lead to substantial losses if the Index declines significantly, as the Fund may be obligated to pay the difference between the strike price and the lower market value of the Index. These risks are heightened with 0DTE options, as their sensitivity to intraday price movements and volatility can lead to sudden and extreme losses within a single trading day.

The Fund may also encounter challenges in managing written options positions, particularly in volatile or illiquid markets, where closing or adjusting positions may be difficult or costly. Additionally, the process of rolling options positions—replacing expiring options with new contracts to maintain exposure—can involve significant transaction costs and expose the Fund to additional risks, such as adverse price movements during the roll period or reduced liquidity in the desired contracts. The Fund may also face margin requirements associated with written options, which could require the Fund to liquidate other assets to meet these obligations, potentially at unfavorable prices. Collectively, these risks may result in significant losses or reduced investment efficiency for the Fund.

Distribution Risk. As part of the Funds' investment objectives, the Funds seek to provide current weekly income. There is no assurance that the Funds will make a distribution in any given week. If a Fund makes distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, weekly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Funds have a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. Each Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, a Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, a Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause a Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, a Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on a Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of a Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as the Exchange, and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of a Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above a Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of a Fund will continue to be met or will remain unchanged. As a result, a Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

Equity Market Risk. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from specific issuers. The equity securities held in the Fund's portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This

may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, or sectors in which the Fund invests. Common stocks, such as those held by the Fund, are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.

General Market Risk. Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. Securities in the Fund's portfolio may underperform in comparison to securities in the general financial markets, a particular financial market, or other asset classes, due to a number of factors, including inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters or events, pandemic diseases, terrorism, regulatory events, and government controls.

High Portfolio Turnover Risk. The Funds may actively and frequently trade all or a significant portion of the securities in its portfolio. A high portfolio turnover rate increases transaction costs, which may increase a Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Funds due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Market Capitalization Risk.

- *Large-Capitalization Investing.* The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.
- *Small-Capitalization Investing.* The securities of small-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large- or mid-capitalization companies. The securities of small-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large- or mid-capitalization stocks or the stock market as a whole. Some small capitalization companies have limited product lines, markets, financial resources, and management personnel and tend to concentrate on fewer geographical markets relative to mid- and large-capitalization companies. There is typically less publicly available information concerning smaller-capitalization companies than for larger, more established companies.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Money Market Instrument Risk. The Funds may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

NAV Erosion Risk Due to Distributions. If a Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date (i.e., the date on which one needs to own a dividend-paying stock in order to receive the upcoming dividend payment). The repeated payment of distributions, if any, by a Fund may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because each Fund is “non-diversified,” a Fund may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause a Fund’s overall value to decline to a greater degree than if such Fund held a more diversified portfolio. This may increase the Fund’s volatility and have a greater impact on such Fund’s performance.

Operational Risk. Each Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Funds’ service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. Each Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect a Fund’s ability to meet its investment objective. Although the Funds and the Funds’ investment advisor seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Referenced Index Risk. Each Fund invests in options contracts that are based on the value of the corresponding Index. This subjects the Fund to certain of the same risks as if it owned shares of the companies that comprised the Index, even though it does not. By virtue of the Fund’s investments in options contracts that are based on the value of its corresponding Index, the Fund may also be subject to the following risks:

Indirect Investment in an Index Risk. Each Index is not affiliated with the Trust, the Fund, the Adviser, or their respective affiliates and is not involved with this offering in any way. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the underlying stocks that comprise an Index but will be subject to declines in the performance of the Index. However, the effect of dividends is indirectly reflected in the Fund’s strategy, as dividends paid by the Index’s component securities are incorporated into the pricing of the options used for synthetic tracking.

Index Trading Risk. The trading price of the Index may be highly volatile and could continue to be subject to wide fluctuations in response to various factors. The stock market in general has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of companies.

Tax Risk. The Funds intend to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, each Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If a Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund’s taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed.

U.S. Government and U.S. Agency Obligations Risk. The Funds may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

PORTFOLIO HOLDINGS

Information about each Fund’s daily portfolio holdings is, or will be, available on the Funds’ website at www.yieldmaxetfs.com.

A complete description of each Fund’s policies and procedures with respect to the disclosure of a Fund’s portfolio holdings is available in the Funds’ SAI.

MANAGEMENT

Investment Adviser

Tidal Investments LLC (the “Adviser”), located at 234 West Florida Street, Suite 203, Milwaukee, Wisconsin 53204, is an SEC registered investment adviser and a Delaware limited liability company. Tidal was founded in March 2012 and is dedicated to understanding, researching and managing assets within the expanding ETF universe. As of December 31, 2024, Tidal had assets under management of approximately \$27.68 billion and served as the investment adviser or sub-adviser for 193 registered funds.

Tidal serves as investment adviser to the Funds and has overall responsibility for the general management and administration of the Funds pursuant to an investment advisory agreement with the Trust, on behalf of each Fund (the “Advisory Agreement”). The Adviser also arranges for sub-advisory, transfer agency, custody, fund administration, and all other related services necessary for the Fund to operate. For the services provided to the Funds, each Fund pays the Adviser a unitary management fee of 0.99%, which is calculated daily and paid monthly, at an annual rate based on such Fund’s average daily net assets.

Under the Advisory Agreement, in exchange for a single unitary management fee from the Fund, the Adviser has agreed to pay all expenses incurred by such Fund except for its advisory fee, interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, extraordinary expenses, distribution fees and expenses paid by a Fund under any distribution plan adopted pursuant to Rule 12b-1 under the 1940 Act, and the unitary management fee payable to the Adviser (collectively, the “Excluded Expenses”).

Advisory Agreements

A discussion regarding the basis for the Board’s approval of the Advisory Agreement will be available in the July 31, 2025 Certified Shareholder Report on Form N-CSR.

Portfolio Managers

The following individuals (each, a “Portfolio Manager”) have served as portfolio managers of each Fund since inception in. Mr. Pestrichelli is primarily responsible for the day-to-day management of each Fund, and Ms. Duan and Mr. Mullen oversee trading and execution for each Fund.

Jay Pestrichelli, Portfolio Manager for the Adviser

Mr. Pestrichelli joined the Adviser in 2025 and is Chief Trading Officer of the Adviser’s ETF Trading and Portfolio Management team. Mr. Pestrichelli has over 30 years of experience in the financial markets. Prior to joining the Adviser, Mr. Pestrichelli co-founded ZEGA Financial, LLC (“ZEGA”) where he led the development and execution of ZEGA’s investment strategies since its inception in 2011. He is also the author of the best-selling book “Buy & Hedge: The Five Iron Rules for Investing Over the Long Term.” Prior to founding ZEGA, Mr. Pestrichelli spent 12 years managing and growing the online trading business for TD Ameritrade from 1999 to 2010. Mr. Pestrichelli has a Bachelor degree in Behavioral Science from Concordia College.

Qiao Duan, CFA, Portfolio Manager for the Adviser

Qiao Duan serves as Portfolio Manager at the Adviser, having joined the firm in October 2020. From February 2017 to October 2020, she was an execution Portfolio Manager at Exponential ETFs, where she managed research and analysis relating to all Exponential ETF strategies. Ms. Duan previously served as a portfolio manager for the Exponential ETFs from their inception in May 2019 until October 2020. Ms. Duan received a Master of Science in Quantitative Finance and Risk Management from the University of Michigan in 2016 and a Bachelor of Science in Mathematics and Applied Mathematics from Xiamen University in 2014. She holds the CFA designation.

Christopher P. Mullen, Portfolio Manager for the Adviser

Christopher P. Mullen serves as Portfolio Manager at the Adviser, having joined the firm in January 2024. From September 2019 to December 2023, he was a Portfolio Manager at Vest Financial LLC, where he managed exchange-traded funds, mutual funds and retirement fund portfolios. Mr. Mullen previously served as a Senior Portfolio Analyst at ProShares Advisors LLC from September 2016 until September 2019. Prior to that, Mr. Mullen served as associate portfolio manager at USCF Investments LLC from February 2013 to September 2016. Mr. Mullen received a Master of Business Administration from the University of Maryland. He also holds a dual bachelor’s degree in global politics and history from Marquette University.

CFA® is a registered trademark owned by the CFA Institute.

The Funds’ SAI provides additional information about each portfolio manager’s compensation structure, other accounts that each portfolio manager manages, and each portfolio manager’s ownership of Shares.

Fund Supporters

The Adviser, Tidal, ZEGA, Lucania Investments LLC (“Lucania”), and Level ETF Ventures LLC (“Level,” and together with the Adviser, ZEGA and Lucania, the “Supporters” and each a “Supporter”) have entered into a fund support agreement pursuant to which each Supporter has agreed to provide financial support (as described below) to the Funds. Every month, the unitary management fees for each Fund are calculated and paid to the Adviser, and the Adviser retains a portion of the unitary management fees from each Fund. In return for its financial support for the Funds, the Adviser has agreed to pay each Supporter a portion of any remaining profits generated by the unitary management fees for the Funds. If the aggregate amount of the unitary management fees for the Funds exceeds the aggregate of the Funds’ operating expenses and the Adviser-retained amounts, that excess amount is considered “remaining profit.” In that case, the Adviser will pay a portion of the remaining profits to the Supporters. Further, if the aggregate amount of the unitary management fees for the Funds is less than the aggregate of Funds’ operating expenses and the Adviser-retained amounts, each Supporter is obligated to reimburse the Adviser for a portion of the shortfall.

HOW TO BUY AND SELL SHARES

Each Fund issues and redeems Shares only in Creation Units at the NAV per share next determined after receipt of an order from an AP. Only APs may acquire Shares directly from a Fund, and only APs may tender their Shares for redemption directly to the Funds, at NAV. APs must be a member or participant of a clearing agency registered with the SEC and must execute a Participant Agreement that has been agreed to by the Distributor (defined below), and that has been accepted by a Fund's transfer agent, with respect to purchases and redemptions of Creation Units. Once created, Shares trade in the secondary market in quantities less than a Creation Unit.

In order to purchase Creation Units of a Fund, an AP must generally deposit a designated portfolio of equity securities (the "Deposit Securities") and/or a designated amount of U.S. cash. Purchases and redemptions of Creation Units primarily with cash, rather than through in-kind delivery of portfolio securities, may cause the Funds to incur certain costs. These costs could include brokerage costs or taxable gains or losses that it might not have incurred if it had made redemption in-kind. These costs could be imposed on a Fund, and thus decrease the Fund's NAV, to the extent that the costs are not offset by a transaction fee payable by an AP.

Most investors buy and sell Shares in secondary market transactions through brokers. Individual Shares are listed for trading on the secondary market on the Exchange and can be bought and sold throughout the trading day like other publicly traded securities.

When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offer price in the secondary market on each leg of a round trip (purchase and sale) transaction. In addition, because secondary market transactions occur at market prices, you may pay more than NAV when you buy Shares, and receive less than NAV when you sell those Shares.

Book Entry

Shares are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company ("DTC") or its nominee is the record owner of all outstanding Shares.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. DTC's participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book-entry or "street name" through your brokerage account.

Frequent Purchases and Redemptions of Shares

None of the Funds imposes any restrictions on the frequency of purchases and redemptions of Shares. In determining not to approve a written, established policy, the Board evaluated the risks of market timing activities by a Fund's shareholders. Purchases and redemptions by APs, who are the only parties that may purchase or redeem Shares directly with a Fund, are an essential part of the ETF process and help keep Share trading prices in line with the NAV. As such, the Funds accommodate frequent purchases and redemptions by APs. However, the Board has also determined that frequent purchases and redemptions for cash may increase tracking error and portfolio transaction costs and may lead to the realization of capital gains. To minimize these potential consequences of frequent purchases and redemptions, each Fund employs fair value pricing and may impose transaction fees on purchases and redemptions of Creation Units to cover the custodial and other costs incurred by such Fund in effecting trades. In addition, the Funds and the Adviser reserve the right to reject any purchase order at any time.

Determination of Net Asset Value

Each Fund's NAV is calculated as of the scheduled close of regular trading on the New York Stock Exchange ("NYSE"), generally 4:00 p.m. Eastern Time, each day the NYSE is open for regular business. The NAV for the Funds is calculated by dividing such Fund's net assets by its Shares outstanding.

In calculating its NAV, each Fund generally value its assets on the basis of market quotations, last sale prices, or estimates of value furnished by a pricing service or brokers who make markets in such instruments. If such information is not available for a security held by a Fund or is determined to be unreliable, the security will be valued at fair value estimates under guidelines established by the Adviser (as described below).

Fair Value Pricing

The Board has designated the Adviser as the "valuation designee" for the Fund under Rule 2a-5 of the 1940 Act, subject to its oversight. The Adviser has adopted procedures and methodologies, which have been approved by the Board, to fair value Fund investments whose market prices are not "readily available" or are deemed to be unreliable. For example, such circumstances may arise when: (i) an investment has been delisted or has had its trading halted or suspended; (ii) an investment's primary pricing source is unable or unwilling

to provide a price; (iii) an investment's primary trading market is closed during regular market hours; or (iv) an investment's value is materially affected by events occurring after the close of the investment's primary trading market. Generally, when fair valuing an investment, the Adviser will take into account all reasonably available information that may be relevant to a particular valuation including, but not limited to, fundamental analytical data regarding the issuer, information relating to the issuer's business, recent trades or offers of the investment, general and/or specific market conditions, and the specific facts giving rise to the need to fair value the investment. Fair value determinations are made in good faith and in accordance with the fair value methodologies included in the Adviser-adopted valuation procedures. The Adviser will fair value Fund investments whose market prices are not "readily available" or are deemed to be unreliable. Due to the subjective and variable nature of fair value pricing, there can be no assurance that the Adviser will be able to obtain the fair value assigned to the investment upon the sale of such investment.

Delivery of Shareholder Documents – Householding

Householding is an option available to certain investors of the Funds. Householding is a method of delivery, based on the preference of the individual investor, in which a single copy of certain shareholder documents can be delivered to investors who share the same address, even if their accounts are registered under different names. Householding for the Funds is available through certain broker-dealers. If you are interested in enrolling in householding and receiving a single copy of prospectuses and other shareholder documents, please contact your broker-dealer. If you are currently enrolled in householding and wish to change your householding status, please contact your broker-dealer.

DIVIDENDS, DISTRIBUTIONS, AND TAXES

Dividends and Distributions

The Funds intend to pay out dividends and interest income, if any, weekly, and distribute any net realized capital gains to its shareholders at least annually.

The Funds will declare and pay income and capital gain distributions, if any, in cash. Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available. Your broker is responsible for distributing the income and capital gain distributions to you.

Taxes

The following discussion is a summary of some important U.S. federal income tax considerations generally applicable to investments in the Funds. Your investment in a Fund may have other tax implications. Please consult your tax advisor about the tax consequences of an investment in Shares, including the possible application of foreign, state, and local tax laws.

Each Fund intends to qualify each year for treatment as a regulated investment company (a "RIC") under the Internal Revenue Code of 1986, as amended. If it meets certain minimum distribution requirements, a RIC is not subject to tax at the fund level on income and gains from investments that are timely distributed to shareholders. However, a Fund's failure to qualify as a RIC or to meet minimum distribution requirements would result (if certain relief provisions were not available) in fund-level taxation and, consequently, a reduction in income available for distribution to shareholders.

Unless your investment in Shares is made through a tax-exempt entity or tax-advantaged account, such as an IRA plan, you need to be aware of the possible tax consequences when a Fund makes distributions, when you sell your Shares listed on the Exchange, and when you purchase or redeem Creation Units (institutional investors only).

The following general discussion of certain U.S. federal income tax consequences is based on provisions of the Code and the regulations issued thereunder as in effect on the date of this SAI. New legislation, as well as administrative changes or court decisions, may significantly change the conclusions expressed herein, and may have a retroactive effect with respect to the transactions contemplated herein.

Taxes on Distributions. Each Fund intends to pay out dividends and interest income, if any, monthly, and distribute any net realized capital gains to its shareholders at least annually. For federal income tax purposes, distributions of net investment income are generally taxable as ordinary income. Taxes on distributions of net capital gains (if any) are determined by how long the Fund owned the investments that generated them, rather than how long a shareholder has owned their Shares. Sales of assets held by a Fund for more than one year generally result in long-term capital gains and losses, and sales of assets held by such Fund for one year or less generally result in short-term capital gains and losses. Distributions of a Fund's net capital gain (the excess of net long-term capital gains over net short-term capital losses) that are reported by such Fund as capital gain dividends ("Capital Gain Dividends") will be taxable as long-term capital gains. Distributions of short-term capital gain will generally be taxable as ordinary income. Dividends and distributions are generally taxable to you whether you receive them in cash or reinvest them in additional Shares.

Distributions reported by a Fund as "qualified dividend income" are generally taxed to non-corporate shareholders at rates applicable to long-term capital gains, provided certain holding period and other requirements are met. "Qualified dividend income" generally is income derived from dividends paid by U.S. corporations or certain foreign corporations that are either incorporated in a U.S. possession

or eligible for tax benefits under certain U.S. income tax treaties. In addition, dividends that a Fund receives in respect of stock of certain foreign corporations may be qualified dividend income if that stock is readily tradable on an established U.S. securities market. Corporate shareholders may be entitled to a dividends-received deduction for the portion of dividends they receive from a Fund that are attributable to dividends received by such Fund from U.S. corporations, subject to certain limitations. Given the investment strategies of the Funds, it is unlikely that any dividends paid by a Fund will be qualified dividends or be eligible for the corporate dividends paid deduction.

Shortly after the close of each calendar year, you will be informed of the character of any distributions received from a Fund.

In addition to the federal income tax, certain individuals, trusts, and estates may be subject to a Net Investment Income (“NII”) tax of 3.8%. The NII tax is imposed on the lesser of: (i) a taxpayer’s investment income, net of deductions properly allocable to such income; or (ii) the amount by which such taxpayer’s modified adjusted gross income exceeds certain thresholds (\$250,000 for married individuals filing jointly, \$200,000 for unmarried individuals and \$125,000 for married individuals filing separately). Each Fund’s distributions are includable in a shareholder’s investment income for purposes of this NII tax. In addition, any capital gain realized by a shareholder upon a sale or redemption of shares of a Fund is includable in such shareholder’s investment income for purposes of this NII tax.

In general, your distributions are subject to federal income tax for the year in which they are paid. Certain distributions paid in January, however, may be treated as paid on December 31 of the prior year. Distributions are generally taxable even if they are paid from income or gains earned by a Fund before your investment (and thus were included in the Shares’ NAV when you purchased your Shares).

You may wish to avoid investing in a Fund shortly before a dividend or other distribution, because such a distribution will generally be taxable even though it may economically represent a return of a portion of your investment.

If you are neither a resident nor a citizen of the United States or if you are a foreign entity, distributions (other than Capital Gain Dividends) paid to you by a Fund will generally be subject to a U.S. withholding tax at the rate of 30%, unless a lower treaty rate applies. The Funds may, under certain circumstances, report all or a portion of a dividend as an “interest-related dividend” or a “short-term capital gain dividend,” which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met.

Under the Foreign Account Tax Compliance Act (“FATCA”), the Funds may be required to withhold a generally nonrefundable 30% tax on distributions of net taxable income paid to (A) certain “foreign financial institutions” unless such foreign financial institution agrees to verify, monitor, and report to the Internal Revenue Service (“IRS”) the identity of certain of its account-holders, among other items (or unless such entity is otherwise deemed compliant under the terms of an intergovernmental agreement between the United States and the foreign financial institution’s country of residence), and (B) certain “non-financial foreign entities” unless such entity certifies to the Fund that it does not have any substantial U.S. owners or provides the name, address, and taxpayer identification number of each substantial U.S. owner, among other items. This FATCA withholding tax could also affect a Fund’s return on its investments in foreign securities or affect a shareholder’s return if the shareholder holds its Fund shares through a foreign intermediary. You are urged to consult your tax adviser regarding the application of this FATCA withholding tax to your investment in a Fund and the potential certification, compliance, due diligence, reporting, and withholding obligations to which you may become subject in order to avoid this withholding tax.

Each Fund (or a financial intermediary, such as a broker, through which a shareholder owns Shares) generally is required to withhold and remit to the U.S. Treasury a percentage of the taxable distributions and sale or redemption proceeds paid to any shareholder who fails to properly furnish a correct taxpayer identification number, who has underreported dividend or interest income, or who fails to certify that they are not subject to such withholding.

Taxes When Shares are Sold on the Exchange

Any capital gain or loss realized upon a sale of Shares generally is treated as a long-term capital gain or loss if Shares have been held for more than one year and as a short-term capital gain or loss if Shares have been held for one year or less. However, any capital loss on a sale of Shares held for six months or less is treated as long-term capital loss to the extent of Capital Gain Dividends paid with respect to such Shares. Any loss realized on a sale will be disallowed to the extent Shares of a Fund are acquired, including through reinvestment of dividends, within a 61-day period beginning 30 days before and ending 30 days after the sale of substantially identical Shares.

Taxes on Purchases and Redemptions of Creation Units

An AP having the U.S. dollar as its functional currency for U.S. federal income tax purposes who exchanges securities for Creation Units generally recognizes a gain or a loss. The gain or loss will be equal to the difference between the value of the Creation Units at the time of the exchange and the exchanging AP’s aggregate basis in the securities delivered plus the amount of any cash paid for the Creation Units. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanging AP’s basis in the Creation Units and the aggregate U.S. dollar market value of the securities received, plus any cash received for such Creation Units. The IRS may assert, however, that a loss that is realized upon an exchange of securities for Creation Units may not be currently deducted under the rules governing “wash sales” (for an AP who does not mark-to-market their

holdings) or on the basis that there has been no significant change in economic position. Persons exchanging securities should consult their own tax advisor with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if Shares comprising the Creation Units have been held for more than one year and as a short-term capital gain or loss if such Shares have been held for one year or less.

The Funds may include a payment of cash in addition to, or in place of, the delivery of a basket of securities upon the redemption of Creation Units. The Funds may sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Funds to recognize investment income and/or capital gains or losses that they might not have recognized if they had completely satisfied the redemption in-kind. As a result, the Funds may be less tax efficient if they include such a cash payment in the proceeds paid upon the redemption of Creation Units.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Funds. It is not a substitute for personal tax advice. You also may be subject to foreign, state and local tax on Fund distributions and sales of Shares. Consult your personal tax advisor about the potential tax consequences of an investment in Shares under all applicable tax laws. For more information, please see the section entitled "Federal Income Taxes" in the SAI.

DISTRIBUTION

Foreside Fund Services, LLC, a wholly owned subsidiary of Foreside Financial Group (dba ACA Group), (the "Distributor"), the Funds' distributor, is a broker-dealer registered with the SEC. The Distributor distributes Creation Units for the Fund on an agency basis and does not maintain a secondary market in Shares. The Distributor has no role in determining the policies of the Funds or the securities that are purchased or sold by the Funds. The Distributor's principal address is Three Canal Plaza, Suite 100, Portland, Maine 04101.

The Board has adopted a Distribution (Rule 12b-1) Plan (the "Plan") pursuant to Rule 12b-1 under the 1940 Act. In accordance with the Plan, the Funds are authorized to pay an amount up to 0.25% of its average daily net assets each year to pay distribution fees for the sale and distribution of its Shares.

No Rule 12b-1 fees are currently paid by the Funds, and there are no plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, because the fees are paid out of assets of the respective Fund on an ongoing basis, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

PREMIUM/DISCOUNT INFORMATION

When available, information regarding how often Shares of the Funds traded on the Exchange at a price above (i.e., at a premium) or below (i.e., at a discount) the NAV of such Fund can be found on the Funds' website at www.yieldmaxetfs.com.

ADDITIONAL NOTICES

Shares are not sponsored, endorsed, or promoted by the Exchange. The Exchange is not responsible for, nor has it participated in the determination of, the timing, prices, or quantities of Shares to be issued, nor in the determination or calculation of the equation by which Shares are redeemable. The Exchange has no obligation or liability to owners of Shares in connection with the administration, marketing, or trading of Shares.

Without limiting any of the foregoing, in no event shall the Exchange have any liability for any lost profits or indirect, punitive, special, or consequential damages even if notified of the possibility thereof.

The Adviser, ZEGA, Lucania, Level, and the Funds make no representation or warranty, express or implied, to the owners of Shares or any member of the public regarding the advisability of investing in securities generally or in any Fund particularly.

The Third Amended and Restated Declaration of Trust ("Declaration of Trust") provides a detailed process for the bringing of derivative or direct actions by shareholders in order to permit legitimate inquiries and claims while avoiding the time, expense, distraction, and other harm that can be caused to a Fund or its shareholders as a result of spurious shareholder demands and derivative actions. Prior to bringing a derivative action, a demand by three unrelated shareholders must first be made on a Fund's Trustees. The Declaration of Trust details various information, certifications, undertakings and acknowledgments that must be included in the demand. Following receipt of the demand, the trustees have a period of 90 days, which may be extended by an additional 60 days, to consider the demand. If a majority of the Trustees who are considered independent for the purposes of considering the demand determine that maintaining the suit would not be in the best interests of the Fund, the Trustees are required to reject the demand and the complaining shareholders may not proceed with the derivative action unless the shareholders are able to sustain the burden of proof to a court that the decision of the Trustees not to pursue the requested action was not a good faith exercise of their business judgment on behalf of the Fund. The Declaration of Trust further provides that shareholders owning Shares representing no less than a majority of a Fund's outstanding shares must join in bringing the derivative action. If a demand is rejected, the complaining shareholders will be responsible for the costs and expenses (including attorneys' fees) incurred by the Fund in connection with the consideration of the demand, if a court determines

that the demand was made without reasonable cause or for an improper purpose. If a derivative action is brought in violation of the Declaration of Trust, the shareholders bringing the action may be responsible for the Fund's costs, including attorneys' fees, if a court determines that the action was brought without reasonable cause or for an improper purpose. The Declaration of Trust provides that no shareholder may bring a direct action claiming injury as a shareholder of the Trust, or any Fund, where the matters alleged (if true) would give rise to a claim by the Trust or by the Trust on behalf of a Fund, unless the shareholder has suffered an injury distinct from that suffered by the shareholders of the Trust, or the Fund, generally. Under the Declaration of Trust, a shareholder bringing a direct claim must be a shareholder of the Fund with respect to which the direct action is brought at the time of the injury complained of or have acquired the shares afterwards by operation of law from a person who was a shareholder at that time. The Declaration of Trust further provides that a Fund shall be responsible for payment of attorneys' fees and legal expenses incurred by a complaining shareholder only if required by law, and any attorneys' fees that the Fund is obligated to pay shall be calculated using reasonable hourly rates. These provisions do not apply to claims brought under the federal securities laws.

The Declaration of Trust also requires that actions by shareholders against a Fund be brought exclusively in a federal or state court located within the State of Delaware. This provision will not apply to claims brought under the federal securities laws. Limiting shareholders' ability to bring actions only in courts located in Delaware may cause shareholders economic hardship to litigate the action in those courts, including paying for traveling expenses of witnesses and counsel, requiring retaining local counsel, and may limit shareholders' ability to bring a claim in a judicial forum that shareholders find favorable for disputes, which may discourage such actions.

FINANCIAL HIGHLIGHTS

This section would ordinarily include Financial Highlights for the Funds. The Financial Highlights tables are intended to help you understand the performance of each Fund for that Fund's periods of operations. Because the Funds have not yet commenced operations as of the date of this Prospectus, no Financial Highlights are shown.

SUMMARY INFORMATION

YieldMax™ Short TSLA Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income. The Fund's secondary investment objective is to seek inverse (opposite) exposure to the share price of the common stock of Tesla, Inc. ("TSLA" or "Underlying Security"), subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expense (includes dividend, tax and broker expense)	0.14%
Acquired Fund Fees and Expenses ⁽²⁾	0.01%
Total Annual Fund Operating Expenses ⁽²⁾	<u>1.14%</u>

⁽¹⁾ The Fund's adviser will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), and litigation expenses, and other non-routine or extraordinary expenses.

⁽²⁾ Acquired Fund Fees and Expenses ("AFFE") are the indirect costs of investing in other investment companies. Total Annual Fund Operating Expenses do not correlate to the expense ratios in the Fund's Financial Highlights because the Financial Highlights include only the direct operating expenses incurred by the Fund and exclude AFFE.

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem or hold all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$116	\$362	\$628	\$1,386

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. For the fiscal period from May 1, 2024 (commencement of operations) to October 31, 2024, the Fund's portfolio turnover rate was 64% of the average value of its portfolio.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect *inverse* exposure to the share price (*i.e.*, the price returns) of the common stock of Tesla, Inc. The Fund's potential for gains from **decreases** in the share price of TSLA's stock is limited. If the share price of the Underlying Security significantly decreases, the Fund will not fully benefit from the inverse of those decreases. The Fund will employ its investment strategy as it relates to the Underlying Security regardless of whether there are periods of strong market, economic, or other conditions and will not take temporary defensive positions during such periods.

As further described below, the Fund uses either a synthetic covered put strategy or synthetic covered put spread strategy to provide income and indirect *inverse* exposure to the share price returns of the Underlying Security, subject to a limit on potential investment

gains as a result of the nature of the options strategy it employs. That is, the Fund not only seeks to generate income from its options investments but also aims to derive additional gains when the share price of the Underlying Security **decreases**. The Fund's options contracts provide:

- indirect inverse exposure to the share price returns of the Underlying Security,
- current income from the option premiums, and
- a limit on the Fund's participation in gains, if any, arising from **decreases** in the share price of the Underlying Security.

For more information, see sections "The Fund's Use of Option Contracts," "Synthetic Covered Put Strategy" and "Synthetic Covered Put Spread Strategy" below.

The Fund's investment adviser is Tidal Investments LLC ("Tidal" or the "Adviser").

Why invest in the Fund?

- The Fund seeks to benefit when the share price of the Underlying Security decreases. The Fund's potential corresponding benefit from decreases in the share price of the Underlying Security is limited.
- The Fund seeks to generate monthly income, which is not dependent on the price depreciation of the Underlying Security.
- The Fund seeks to manage potential losses (i.e., cap losses if the share price of the Underlying Security experiences significant gains) by purchasing out-of-the-money call options (further described below).

Although the Fund may not fully benefit from decreases in the Underlying Security's share price, the Fund's portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security. Further, an Investment in the Fund differs from "short selling" or "shorting" the Underlying Security.

- The Fund's strategy will limit its potential gains if the Underlying Security shares decrease in value.
- The Fund's strategy is subject to potential losses if the Underlying Security shares increase in value, which may not be offset by income received by the Fund or by the purchase of out-of-the-money call options (further described below).
- The Fund does not invest directly in the Underlying Security.
- The Fund does not directly short the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund's Use of Option Contracts

As part of the Fund's synthetic covered put strategy and synthetic covered put spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® ("FLEX") call and put option contracts that are based on the share price of the Underlying Security. The Fund may use European FLEX options as well as options that are exercisable at any time (i.e. American style options contracts).

See the "Additional Information About the Fund" section for an overview of put and call option terminology.

Synthetic Covered Put Strategy Overview

In seeking to achieve its investment objective, the Fund will implement a "*synthetic* covered put" strategy using the standardized exchange-traded and FLEX options. The Fund uses a synthetic put strategy rather than a traditional one, utilizing Treasuries as collateral to potentially achieve higher returns than those of the Underlying Security.

- A *traditional* covered put strategy is an investment strategy where an investor (the Fund) sells a put option on an Underlying Security it is short.
- A *synthetic* covered put strategy is similar to a traditional covered put strategy in that the investor sells a put option that is based on the value of the Underlying Security. However, in a synthetic covered put strategy, the investor (the Fund) does not actually short the Underlying Security, but rather seeks to synthetically replicate a short position in the Underlying Security (i.e., it seeks inverse exposure to the share price movements of the Underlying Security) through the use of various investment instruments.

The Fund's synthetic covered put strategy consists of the following four elements, each of which is described in greater detail below:

- Synthetic short exposure to the Underlying Security, which allows the Fund to seek to participate, on an inverse basis, in changes, up or down, to the price of the Underlying Security's shares.
- Covered put strategies, which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.
- Out-of-the money ("OTM") call options, which are purchased to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value.

However, this loss capping works only if the Underlying Security's share price rises to or above the strike price of the OTM call options that were purchased. If the share price increases but stays below the strike price of these options, the Fund will incur losses proportionate to this price increase.

Synthetic Covered Put Strategy

1. Synthetic Short Exposure

To achieve a synthetic short exposure to the Underlying Security, the Fund may write (sell) the Underlying Security call options and, simultaneously, go long (buy) the Underlying Security put options to try to replicate inverse exposure to the share price movements of the Underlying Security. The put options purchased by the Fund and the call options sold by the Fund will generally have three-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The Fund uses the proceeds from selling call options to help pay for the purchased put options. The combination of the long put options and sold call options provides the Fund with investment exposure equal to approximately -100% of the Underlying Security's share price changes for the duration of the applicable options exposure (i.e., the synthetic short position is expected to gain value when the share price of the Underlying Security decreases and to lose value when the share price of the Underlying Security increases).

2. Covered Put Strategies

Covered Put Writing Strategy

As part of its strategy, the Fund will write (sell) put option contracts on the Underlying Security to generate income. The put options written (sold) by the Fund will generally have 1-month or less expiration dates (the "Put Period") and a strike price that is approximately 0%-15% below the then-current Underlying Security's share price at the time of such sales.

It is important to note that the sale of the Underlying Security put option contracts will limit the Fund's participation in decreases in the Underlying Security's share price. If the share price of the Underlying Security decreases, the above-referenced synthetic short exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's share price decreases beyond the strike price of one or more of the sold (short) put option contracts, the Fund will lose money on those short put positions, and the losses will, in turn, limit the gains of the Fund's synthetic short exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic short exposure to the Underlying Security and the sold (short) Underlying Security put positions) will limit the Fund's participation in decreases in the Underlying Security's share price beyond a certain point.

Covered Put Spread Strategy

The Adviser will employ the Covered Put Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Put Strategy. The Fund may write (sell) credit put spreads (described below) rather than stand-alone put option contracts to seek greater participation in the potential decline of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered put spread strategy when it believes that the share price of its Underlying Security is likely to decline significantly in the short term (e.g., following a substantial market rally or overall negative market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit put spreads may prove more advantageous to the Fund's total return than the covered put strategy.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered put strategy.

4. OTM Call Purchasing

The Fund purchases out-of-the-money (OTM) calls to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value.

OTM call options are a type of options contract where the strike price is set higher than the current market price of the underlying asset, referred to here as the Underlying Security. When the Fund buys these OTM call options, it is essentially setting a fixed price level. This level acts as a cap on the Fund's potential losses that might arise from its indirect inverse exposure to the share price of the Underlying Security. **However, this loss capping works only if the Underlying Security's share price rises to or above the strike price of the OTM call options that were purchased. If the share price increases but stays below the strike price of these options, the Fund will incur losses proportionate to this price increase.**

For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund's losses will be capped at approximately 70%.

The Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund's value and/or any income otherwise generated by the Fund's investment strategy.

The Fund intends to maintain its synthetic covered put strategy through the use of options contracts. As the options contracts it holds are traded, exercised or expire, it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) put option contracts on the Underlying Security, as described above. The income, in the form of option premiums received from such option sales, will be primarily influenced by the volatility of the Underlying Security shares, although other factors, including interest rates, will also impact the level of income.
- Investing in short-term U.S. Treasury securities. The income generated by such securities will be influenced by interest rates at the time of investment.
- In addition, the Fund's use of the covered put spread strategy may occasionally allow it to capture a substantial portion of any significant decrease in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the put options, and the Fund's distributions may include some of those profits.

The Fund's income from writing (selling) put option contracts on the Underlying Security will be partially offset (reduced) by the premiums paid for purchasing OTM call options, which are purchased to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value.

Fund Portfolio

YieldMax™ Short TSLA Option Income Strategy ETF – Principal Holdings			
Portfolio Holdings (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity	Primary Purpose of Holding
Purchased put option contracts	<p>“at-the-money” (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide exposure to negative price returns of the Underlying Security.</p> <p>If the share price of the Underlying Security decreases, these options will generate corresponding increases to the Fund.</p>	3-month to 6-month expiration dates	Combined with the sold call options, creates a synthetic short position on the Underlying Security.
Sold call option contracts	<p>“at-the-money” (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased put options described above.</p> <p>However, the sold call option contracts provide exposure to the full extent of any share price increases experienced by the Underlying Security.</p>	3-month to 6-month expiration dates	Combined with the purchased put options, creates a synthetic short position on the Underlying Security.
Sold (short) put option contracts (Covered Put Writing Strategy)	<p>The strike price is approximately 0%-15% below the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced.</p>	1-month or less expiration dates	Generate income for the Fund in the form of premiums, in return for capping the returns of the Fund’s synthetic short position.
Sold (short) put option contracts (Covered Put Spread Strategy)	<p>The strike price is approximately 0%-15% below than the then-current share price of the Fund’s Underlying Security at the time of sale.</p> <p>Sold put option contracts provide inverse exposure to the full extent of any declines in the value experienced by the Fund’s Underlying Security, minus the premium received.</p>	1-month or less expiration dates	Combined with the purchased put option contract below, generates income for the Fund in the form of net premiums, in return for limiting the returns of the Fund’s synthetic short position.
Purchased put option contracts (Covered Put Spread Strategy)	<p>“out-of-the-money” (<i>i.e.</i>, the strike price is below the strike price of the corresponding Covered Put Spread Strategy sold put).</p> <p>Bought put option contracts provide exposure to the full extent of any declines in the value experienced by the Fund’s Underlying Security below the option’s strike price.</p>	1-month or less expiration dates	Combined with the Sold (short) put option contracts above, generates income for the Fund in the form of net premiums, in return for limiting the returns of the Fund’s synthetic short position.
U.S Treasury Securities and Cash	<p>Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government.</p> <p>These instruments are used as collateral for the Fund’s derivative investments.</p> <p>They will also generate income.</p>	6-month to 2-year maturities	Collateral for the options positions and some additional income.

Purchased call option contracts (<i>OTM Call Purchasing</i>)	<p>“out-of-the-money” (i.e., the strike price is above the then-current share price of the Underlying Security at the time of purchase).</p> <p>They limit the Fund’s potential losses if the share price of the Underlying Security experiences significant gains. They represent a cost (debit) that will partially offset (reduce) the net premium received from the sale of the put options.</p>	1-month to 6-month expiration dates	Limit the maximum loss of the Fund’s synthetic short position.
--	--	-------------------------------------	--

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund’s net assets and the market value of the options package is expected to be between 0% and 50% of the Fund’s net assets. The combination of these investment instruments provides indirect inverse investment exposure to the share price of Underlying Security equal to at least 100% of the Fund’s total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide inverse exposure to the performance of TSLA.

The Fund is classified as “non-diversified” under the 1940 Act.

There is no guarantee that the Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Tesla, Inc.

Tesla, Inc. is an operating company that designs develops, manufactures, leases and sells high performance fully electric vehicles, solar energy generation systems and energy storage products. Tesla, Inc. operates two segments: (i) automotive and (ii) energy generation and storage. The automotive segment includes the design, development, manufacturing, sales and leasing of electric vehicles as well as sales of automotive regulatory credits. The energy generation and storage segment includes the design, manufacture, installation, sales and leasing of solar energy generation and energy storage products and related services and sales of solar energy systems incentives. Tesla, Inc. is listed on Nasdaq. The aggregate market value of voting stock held by non-affiliates of Tesla, Inc., as of the most recent available data at time of drafting this prospectus (June 30, 2024), was \$550.17 billion (based on the closing price for shares of Tesla, Inc.’s common stock as reported by Nasdaq on June 28, 2024).

Tesla, Inc. is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the SEC by Tesla, Inc. pursuant to the Exchange Act can be located by reference to the SEC file number 001-34756 through the SEC’s website at www.sec.gov. In addition, information regarding Tesla, Inc. may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to the Underlying Security or other securities of Tesla, Inc. The Fund has derived all disclosures contained in this document regarding Tesla, Inc. from the publicly available documents. In connection with the offering of the securities, none of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such documents or made any due diligence inquiry with respect to Tesla, Inc. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding Tesla, Inc. is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of Tesla, Inc. (and therefore the price of Tesla, Inc. at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning Tesla, Inc. could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser, the Adviser, or their respective affiliates makes any representation to you as to the performance of the Underlying Security.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH TESLA, INC.

Due to the Fund’s investment strategy, the Fund’s economic exposure is inversely related to the industry assigned to TSLA. As of January 21, 2025, TSLA is assigned to the automobiles industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”) per share,

trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

TSLA Price Appreciation Risk. As part of the Fund's synthetic covered put strategy, the Fund purchases and sells call and put option contracts that are based on the share price of TSLA common stock. This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund's indirect inverse exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security's share price increases. If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses. The Fund may also be subject to the following risks:

Indirect Investment in TSLA Risk. Tesla, Inc. is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of Tesla, Inc. but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be adversely impacted by increases in the share price of the Underlying Security.

Underlying Security Trading Risk. The trading price of the Underlying Security may become less volatile over time, which could have an adverse impact on the Fund's performance. The Fund's synthetic covered put strategy is designed to benefit from significant price fluctuations in the Underlying Security. However, if the Underlying Security experiences reduced volatility, it may lead to a decrease in the Fund's potential returns.

Historically, the Underlying Security's shares have exhibited substantial price swings, but there is a possibility that market conditions, investor sentiment, or other factors may contribute to decreased volatility in the future. Such reduced volatility could limit the opportunities for the Fund to profit from its credit spread positions, as the strategy relies on price differentials between options with varying strike prices.

It's important to note that the Fund's performance is closely tied to the dynamics of the Underlying Security's share price. As such, any significant reduction in the volatility of the Underlying Security's share price may present challenges for the Fund's synthetic covered put strategy and may affect its ability to achieve its investment objectives. Investors should consider this potential risk when evaluating their investment in the Fund.

TSLA Good Performance Risk. Tesla, Inc. may meet or exceed its publicly announced expectations or guidelines regarding its business, which could potentially lead to a rise in the share price of the Underlying Security. Tesla, Inc. regularly provides guidance concerning its anticipated financial and business performance, including sales and production projections, future revenues, gross margins, profitability, and cash flows. However, forecasting future events and identifying key factors affecting business conditions inherently involves uncertainty. Tesla, Inc.'s guidance may ultimately prove accurate or may prove underestimated, as it relies on assumptions such as global and local economic conditions, anticipated production and sales volumes, average sales prices, supplier and commodity costs, and planned cost reductions. If Tesla, Inc.'s guidance is accurate or varies positively from actual results, TSLA's share price could increase significantly and, as a result, the Fund may suffer significant losses.

Increased Electric Vehicle Consumer Adoption Risk. Tesla may experience substantial growth if consumer demand for electric vehicles continues to expand. Deviations from expected market developments, be it accelerated growth, shifts in demand, or heightened electric vehicle adoption, could present advantageous conditions for Tesla, Inc.'s business. These conditions might bolster its market position, enhance overall prospects, strengthen financial stability, and improve operational performance. Despite having fewer resources and production capabilities compared to established competitors with traditional internal combustion engine offerings, Tesla, Inc. appears poised to benefit from the expanding electric vehicle sector. As electric vehicles currently constitute a smaller fraction of the overall vehicle market, Tesla, Inc. appears well-positioned to capitalize on factors such as shifting consumer preferences, increased competition from alternative fuel vehicles, and supportive government policies and incentives. Furthermore, Tesla, Inc. competes in a dynamic demographic landscape where innovation and differentiation play key roles. In a sector marked by cyclical sales patterns, Tesla, Inc. has the potential to navigate these trends adeptly, seizing opportunities during market upswings and maintaining resilience during downturns, ultimately contributing to its long-term success, all of which could significantly increase the share price of TSLA's common stock. As a result, the Fund may suffer significant losses.

Inverse Auto Manufacturers Industry Risk. The automotive industry may present continued opportunities for Tesla, Inc.'s business operations. This sector is known for its cyclicity, but Tesla, Inc. may be able to leverage its innovative approaches to minimize the impact of periodic operating losses. Labor disputes, fluctuations in component prices, and supplier disruptions,

often encountered by traditional automakers, may be less pronounced for Tesla, Inc. due to its unique production and supply chain strategies. Tesla's investments in cutting-edge automotive technologies, such as autonomous vehicles, may indeed require substantial capital, but they hold the potential for long-term profitability. Additionally, Tesla, Inc.'s nimble approach allows it to respond swiftly to government policies and regulations, potentially aligning its strategies with favorable incentives. While many established automotive manufacturers are diversified, Tesla, Inc.'s focused product line and growing customer base may enable it to effectively navigate industry dynamics and capitalize on factors that can drive its sustained success, all of which could significantly increase the share price of TSLA's common stock. As a result, the Fund may suffer significant losses.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the Underlying Security and the Fund's portfolio of derivatives, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund, in particular, the value of the options contracts in which it invests are substantially influenced by the value of TSLA. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly moves with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in values options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain its synthetic covered put strategy through the use of options contracts, as the options contracts it holds are traded, exercised or expire, it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults, the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of put option contracts, which limits the degree to which the Fund will benefit from decreases in value experienced by TSLA over the Put Period. This means that if TSLA experiences a decrease in value below the strike price of the sold put options during a Put Period, the Fund will likely not experience that increase to the same extent and any Fund gains may significantly differ from the level of TSLA losses over the Put Period. Additionally, because the Fund is limited in the degree to which it will participate in decreases in value experienced by TSLA over each

Put Period, but has significant negative exposure to any increases in value experienced by TSLA over the Put Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the inverse of the performance of TSLA. The Fund's ability to benefit from TSLA losses will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold put option contracts and will vary from Put Period to Put Period. The value of the options contracts is affected by changes in the value and dividend rates of TSLA, changes in interest rates, changes in the actual or perceived volatility of TSLA and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of TSLA changes and time moves towards the expiration of each Put Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly inversely correlate on a day-to-day basis with the returns of TSLA. The amount of time remaining until the options contract's expiration date affects the impact that the value of the options contracts have on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the TSLA will result in changes to the Fund's NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than the inverse of the changes experienced by TSLA.

Purchased OTM Call Options Risk. The Fund's strategy is subject to potential losses if the Underlying Security shares increase in value, which may not be offset by the purchase of out-of-the-money (OTM) call options. The Fund purchases OTM calls to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value. However, the OTM call options will cap the Fund's losses only to the extent that the share price of the Underlying Security increases to a price that is at or above the strike price of the purchased OTM call options. Any increase in the share price of the Underlying Security to a price that is below the strike price of the purchased OTM call options will result in a corresponding loss for the Fund. For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund's losses will be capped at approximately 70%. Notwithstanding the foregoing, if the OTM call options have a strike price that is approximately 100% above the then-current share price of the Underlying Security at the time of the call option purchase, and the share price of the Underlying Security increases by at least 100% during the term of the purchased OTM call options, the Fund will lose all its value. Lastly, the Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund's value and/or any income otherwise generated by the Fund's investment strategy.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, the monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Put Writing Strategy Risk. The path dependency (*i.e.*, the continued use) of the Fund's put writing (selling) strategy will impact the extent that the Fund participates in the price decreases of TSLA and, in turn, the Fund's returns, both during the term of the sold put options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money put options having a one-month term, the Fund's participation in the negative price returns of TSLA will be capped at 7% in any given month. However, over a longer period (*e.g.*, 5 months), the Fund should not be expected to participate fully in the first 35% (*i.e.*, 5 months x 7%) of any negative price returns of TSLA, or the Fund may even lose money, even if the TSLA share price has decreased by at least that much over such period, if during any month over that period TSLA's share price decreased by less than 7%. This example illustrates that both the Fund's participation in the negative price returns of TSLA and its returns will depend not only on the price of TSLA but also on the path that TSLA takes over time.

Covered Put Spread Strategy Risk. The path dependency of the Fund's Covered Put Spread Strategy will impact the extent to which the Fund participates in the price decreases of the Underlying Security and, in turn, the Fund's returns, both during the term of the put spreads and over longer time periods. If, for example, each month the Fund were to sell a put spread where the written put option is 7% out-of-the-money and the purchased put option is 15% out-of-the-money, the Fund's participation in the negative price returns of the Underlying Security will be limited beyond the strike price of the purchased put option. However, over a longer period (*e.g.*, 5 months), the Fund should not be expected to participate fully in the first 35% (*i.e.*, 5 months x 7%) of any negative price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security's share price has decreased by at least that much over such period, if during any month over that period the Underlying Security's share price decreased by less than 7%. This example illustrates that both the Fund's participation in the negative price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time. Additionally, because the strategy involves purchasing a put option to offset the short put position, the net premium collected is reduced compared to a standalone put-writing strategy, potentially limiting the income generated and further constraining the Fund's returns in certain market conditions.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as “Authorized Participants” or “APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund’s investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund’s investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. This risk may be greater for the Fund as it seeks to have exposure to a single reference security as opposed to a more diverse portfolio like a traditional pooled investment. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at a market price that may be below, at or above the Fund’s NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange “circuit breaker” rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that reference a single security, such as TSLA’s common stock, being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund’s holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund’s expenses. These costs, in turn, could decrease the value of the Fund or of its distributions, if any. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund’s assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at

an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from realizing gains or achieving a high correlation with the inverse of TSLA. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

Newer Fund Risk. The Fund is a recently organized management investment company with limited operating history. As a result, prospective investors have a limited track record on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (TSLA), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Michael Venuto, Chief Investment Officer for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (Aps) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

Information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.

SUMMARY INFORMATION

YieldMax™ Short Innovation Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income. The Fund's secondary investment objective is to seek inverse (opposite) exposure to the share price of the ARK Innovation ETF ("ARKK" or "Underlying Security"), subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	<u>0.99%</u>

⁽¹⁾ The Fund's adviser will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), and litigation expenses, and other non-routine or extraordinary expenses.

⁽²⁾ Based on estimated amounts for the current fiscal year.

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem or hold all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect *inverse* exposure to the share price (*i.e.*, the price returns) of the ARK Innovation ETF. The Fund's potential for gains from decreases in the share price of ARKK's is limited. If the share price of the Underlying Security significantly decreases, the Fund will not fully benefit from the inverse of those decreases. The Fund will employ its investment strategy as it relates to the Underlying Security regardless of whether there are periods of strong market, economic, or other conditions and will not take temporary defensive positions during such periods.

As further described below, the Fund uses either a synthetic covered put strategy or synthetic covered put spread strategy to provide income and indirect *inverse* exposure to the share price returns of the Underlying Security, subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. That is, the Fund not only seeks to generate income from its options investments but also aims to derive additional gains when the share price of the Underlying Security decreases. The Fund's options contracts provide:

- indirect inverse exposure to the share price returns of the Underlying Security,

- current income from the option premiums, and
- a limit on the Fund's participation in gains, if any, arising from **decreases** in the share price of the Underlying Security.

For more information, see sections "The Fund's Use of Option Contracts," "Synthetic Covered Put Strategy" and "Synthetic Covered Put Spread Strategy" below.

The Fund's investment adviser is Tidal Investments LLC ("Tidal" or the "Adviser").

Why invest in the Fund?

- The Fund seeks to benefit when the share price of the Underlying Security decreases. The Fund's potential corresponding benefit from decreases in the share price of the Underlying Security is limited.
- The Fund seeks to generate monthly income, which is not dependent on the price depreciation of the Underlying Security.
- The Fund seeks to manage potential losses (i.e., cap losses if the share price of the Underlying Security experiences significant gains) by purchasing out-of-the-money call options (further described below).

Although the Fund may not fully benefit from decreases in the Underlying Security's share price, the Fund's portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security. Further, an Investment in the Fund differs from "short selling" or "shorting" the Underlying Security.

- The Fund's strategy will limit its potential gains if the Underlying Security shares decrease in value.
- The Fund's strategy is subject to potential losses if the Underlying Security shares increase in value, which may not be offset by income received by the Fund or by the purchase of out-of-the-money call options (further described below).
- The Fund does not invest directly in the Underlying Security (nor companies held by ARKK).
- The Fund does not directly short the Underlying Security (nor companies held by ARKK).
- Fund shareholders are not entitled to any Underlying Security dividends or to any dividends paid by companies held by ARKK).

Additional information regarding the Underlying Security is also set forth below.

The Fund's Use of Option Contracts

As part of the Fund's synthetic covered put strategy and synthetic covered put spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® ("FLEX") call and put option contracts that are based on the share price of the Underlying Security. The Fund may use European FLEX options as well as options that are exercisable at any time (i.e. American style options contracts).

See the "Additional Information About the Fund" section for an overview of put and call option terminology.

Synthetic Covered Put Strategy Overview

In seeking to achieve its investment objective, the Fund may implement a "*synthetic* covered put" strategy using the standardized exchange-traded and FLEX options. The Fund uses a synthetic put strategy rather than a traditional one, utilizing Treasuries as collateral to potentially achieve higher returns than those of the Underlying Security.

- A *traditional* covered put strategy is an investment strategy where an investor (the Fund) sells a put option on an Underlying Security it is short.
- A *synthetic* covered put strategy is similar to a traditional covered put strategy in that the investor sells a put option that is based on the value of the Underlying Security. However, in a synthetic covered put strategy, the investor (the Fund) does not actually short the Underlying Security, but rather seeks to synthetically replicate a short position in the Underlying Security (i.e., it seeks inverse exposure to the share price movements of the Underlying Security) through the use of various investment instruments.

The Fund's synthetic covered put strategy consists of the following four elements, each of which is described in greater detail below:

- Synthetic short exposure to the Underlying Security, which allows the Fund to seek to participate, on an inverse basis, in changes, up or down, to the price of the Underlying Security's shares.
- Covered put strategies, which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

- Out-of-the money (“OTM”) call options, which are purchased to seek to manage (cap) the Fund’s potential losses from the Fund’s short exposure to the Underlying Security if it appreciates significantly in value

However, this loss capping works only if the Underlying Security’s share price rises to or above the strike price of the OTM call options that were purchased. If the share price increases but stays below the strike price of these options, the Fund will incur losses proportionate to this price increase.

Synthetic Covered Put Strategy

1. Synthetic Short Exposure

To achieve a synthetic short exposure to the Underlying Security, the Fund will write (sell) the Underlying Security call options and, simultaneously, go long (buy) the Underlying Security put options to try to replicate inverse exposure to the share price movements of the Underlying Security. The put options purchased by the Fund and the call options sold by the Fund will generally have three-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The Fund uses the proceeds from selling call options to help pay for the purchased put options. The combination of the long put options and sold call options provides the Fund with investment exposure equal to approximately -100% of the Underlying Security’s share price changes for the duration of the applicable options exposure (i.e., the synthetic short position is expected to gain value when the share price of the Underlying Security decreases and to lose value when the share price of the Underlying Security increases).

2. Covered Put Strategies

Covered Put Writing Strategy

As part of its strategy, the Fund will write (sell) put option contracts on the Underlying Security to generate income. The put options written (sold) by the Fund will generally have 1-month or less expiration dates (the “Put Period”) and a strike price that is approximately 0%-15% below the then-current Underlying Security’s share price at the time of such sales.

Covered Put Spread Strategy

The Adviser will employ the Covered Put Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Put Strategy. The Fund may write (sell) credit put spreads (described below) rather than stand-alone put option contracts to seek greater participation in the potential decline of its Underlying Security’s share price, while still generating net premium income. The Adviser will primarily employ this covered put spread strategy when it believes that the share price of its Underlying Security is likely to decline significantly in the short term (e.g., following a substantial market rally or overall negative market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit put spreads may prove more advantageous to the Fund’s total return than the covered put strategy.

It is important to note that the sale of the Underlying Security put option contracts will limit the Fund’s participation in decreases in the Underlying Security’s share price. If the share price of the Underlying Security decreases, the above-referenced synthetic short exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security’s share price decreases beyond the strike price of one or more of the sold (short) put option contracts, the Fund will lose money on those short put positions, and the losses will, in turn, limit the gains of the Fund’s synthetic short exposure. As a result, the Fund’s overall strategy (i.e., the combination of the synthetic short exposure to the Underlying Security and the sold (short) Underlying Security put positions) will limit the Fund’s participation in decreases in the Underlying Security’s share price beyond a certain point.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund’s synthetic covered put strategy.

4. OTM Call Purchasing

The Fund purchases out-of-the-money (OTM) calls to seek to manage (cap) the Fund’s potential losses from the Fund’s short exposure to the Underlying Security if it appreciates significantly in value. .

OTM call options are a type of options contract where the strike price is set higher than the current market price of the underlying asset, referred to here as the Underlying Security. When the Fund buys these OTM call options, it is essentially setting a fixed price level. This level acts as a cap on the Fund’s potential losses that might arise from its indirect inverse exposure to the share price of the Underlying Security. **However, this loss capping works only if the Underlying Security’s**

share price rises to or above the strike price of the OTM call options that were purchased. If the share price increases but stays below the strike price of these options, the Fund will incur losses proportionate to this price increase.

For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund's losses will be capped at approximately 70%.

The Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund's value and/or any income otherwise generated by the Fund's investment strategy.

The Fund intends to maintain its synthetic covered put strategy through the use of options contracts. As the options contracts it holds are traded, exercised or expire, it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) put option contracts on the Underlying Security as described above. The income, in the form of option premiums received from such option sales, will be primarily influenced by the volatility of the Underlying Security shares, although other factors, including interest rates, will also impact the level of income.
- Investing in short-term U.S. Treasury securities. The income generated by such securities will be influenced by interest rates at the time of investment.
- In addition, the Fund's use of the covered put spread strategy may occasionally allow it to capture a substantial portion of any significant decrease in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the put options, and the Fund's distributions may include some of those profits.

The Fund's income from writing (selling) put option contracts on the Underlying Security will be partially offset (reduced) by the premiums paid for purchasing OTM call options, which are purchased to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value.

Fund Portfolio

YieldMax™ Short ARKK Option Income Strategy ETF – Principal Holdings			
Portfolio Holdings (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity	Primary Purpose of Holding
Purchased put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide exposure to negative price returns of the Underlying Security.</p> <p>If the share price of the Underlying Security decreases, these options will generate corresponding increases to the Fund.</p>	3-month to 6-month expiration dates	Combined with the sold call options, creates a synthetic short position on the Underlying Security.
Sold call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased put options described above.</p> <p>However, the sold call option contracts provide exposure to the full extent of any share price increases experienced by the Underlying Security.</p>	3-month to 6-month expiration dates	Combined with the purchased put options, creates a synthetic short position on the Underlying Security.

Sold (short) put option contracts (<i>Covered Put Writing Strategy</i>)	<p>The strike price is approximately 0%-15% below the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced.</p>	1-month or less expiration dates	Generate income for the Fund in the form of premiums, in return for capping the returns of the Fund's synthetic short position.
Sold (short) put option contracts (<i>Covered Put Spread Strategy</i>)	<p>The strike price is approximately 0%-15% below than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold put option contracts provide inverse exposure to the full extent of any declines in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates	Combined with the purchased put option contract below, generates income for the Fund in the form of net premiums, in return for limiting the returns of the Fund's synthetic short position.
Purchased put option contracts (<i>Covered Put Spread Strategy</i>)	<p>"out-of-the-money" (i.e., the strike price is below the strike price of the corresponding Covered Put Spread Strategy sold put).</p> <p>Bought put option contracts provide exposure to the full extent of any declines in the value experienced by the Fund's Underlying Security below the option's strike price.</p>	1-month or less expiration dates	Combined with the Sold (short) put option contracts above, generates income for the Fund in the form of net premiums, in return for limiting the returns of the Fund's synthetic short position.
U.S Treasury Securities and Cash	<p>Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government.</p> <p>These instruments are used as collateral for the Fund's derivative investments.</p> <p>They will also generate income.</p>	6-month to 2-year maturities	Collateral for the options positions and some additional income.
Purchased call option contracts (<i>OTM Call Purchasing</i>)	<p>"out-of-the-money" (i.e., the strike price is set above the then-current share price of the Underlying Security at the time of purchase).</p> <p>They limit the Fund's potential losses if the share price of the Underlying Security experiences significant gains. They represent a cost (debit) that will partially offset (reduce) the net premium received from the sale of the put options.</p>	1-month to 6-month expiration dates	Limit the maximum loss of the Fund's synthetic short position.

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund's net assets and the market value of the options package is expected to be between 0% and 50% of the Fund's net assets. The combination of these investment instruments provides indirect inverse investment exposure to the share price of the Underlying Security equal to at least 100% of the Fund's total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide inverse exposure to the performance of ARKKe.

The Fund is classified as "non-diversified" under the 1940 Act.

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

ARKK

ARKK's investment objective is long-term growth of capital. ARKK is an actively-managed ETF that invests under normal circumstances primarily (at least 65% of its assets) in domestic and foreign equity securities of companies that are relevant to the Fund's investment theme of disruptive innovation. ARKK's investment adviser defines "disruptive innovation" as the introduction of a technologically enabled new product or service that potentially changes the way the world works. ARKK's investment adviser believes that companies relevant to this theme are those that rely on or benefit from the development of new products or services, technological improvements and advancements in scientific research relating to the areas of genomics (which ARKK's adviser defines as "the study

of genes and their functions, and related techniques, e.g., genomic sequencing); innovation in automation and manufacturing, transportation, energy, artificial intelligence and materials; the increased use of shared technology, infrastructure and services; and technologies that make financial services more efficient.

Under normal circumstances, substantially all of ARKK's assets will be invested in equity securities, including common stocks, partnership interests, business trust shares and other equity investments or ownership interests in business enterprises. ARKK's investments will include micro-, small-, medium- and large-capitalization companies. ARKK's investments in foreign equity securities will be in both developed and emerging markets. ARKK may invest in foreign securities listed on foreign exchanges as well as American Depositary Receipts ("ADRs") and Global Depositary Receipts ("GDRs").

You can find ARKK's prospectus and other information about the ETF, including the most recent reports to shareholders, online by reference to the Investment Company Act File No. 811-22883 through the SEC's website at www.sec.gov.

The information in this prospectus regarding ARKK comes from its filings with the SEC. You are urged to refer to the SEC filings made by ARKK and to other publicly available information (e.g., the ETF's annual reports) to obtain an understanding of the ETF's business and financial prospects. The description of ARKK's principal investment strategies contained herein was taken directly from ARKK's prospectus, dated November 30, 2024.

This document relates only to the securities offered hereby and does not relate to the shares of ARKK or other securities of ARKK. The Fund has derived all disclosures contained in this document regarding ARKK from the publicly available documents. In connection with the offering of the securities, None of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such documents or made any due diligence inquiry with respect to ARKK. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding ARKK is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of ARKK (and therefore the price of ARKK at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning ARKK could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of ARKK.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH ARK ETF TRUST, ARKK, OR ARK INVESTMENT MANAGEMENT LLC.

Due to the Fund's investment strategy, the Fund's investment exposure is inversely related to the industry or group of industries, if any, in which ARKK may concentrate its investments. As of July 31, 2024,, ARKK is not concentrated in any industry, but had significant holdings in the information technology and health care sectors.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

ARKK Price Appreciation Risk. As part of the Fund's synthetic covered put strategy, the Fund purchases and sells call and put option contracts that are based on the share price of ARKK. This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund's indirect inverse exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security's share price increases. **If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses.** The Fund may also be subject to the following risks:

Indirect Investment in ARKK Risk. The ARK Innovation ETF is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of ARKK but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be adversely impacted by increases in the share price of the Underlying Security.

Underlying Security Trading Risk. The trading price of the Underlying Security may become less volatile over time, which could have an adverse impact on the Fund's performance. The Fund's synthetic covered put strategy is designed to benefit from significant price fluctuations in the Underlying Security. However, if the Underlying Security experiences reduced volatility, it may lead to a decrease in the Fund's potential returns.

Historically, the Underlying Security's shares have exhibited substantial price swings, but there is a possibility that market conditions, investor sentiment, or other factors may contribute to decreased volatility in the future. Such reduced volatility could limit the opportunities for the Fund to profit from its credit spread positions, as the strategy relies on price differentials between options with varying strike prices.

It's important to note that the Fund's performance is closely tied to the dynamics of the Underlying Security's share price. As such, any significant reduction in the volatility of the Underlying Security's share price may present challenges for the Fund's synthetic covered put strategy and may affect its ability to achieve its investment objectives. Investors should consider this potential risk when evaluating their investment in the Fund.

ARKK Good Performance Risk. ARKK may meet or exceed its investment objectives, and the share price of the Underlying Security may increase significantly (which would be a detriment to the Fund). The value of ARKK's investments may rise due to positive market and economic conditions, favorable perceptions regarding the industries in which the issuers of securities ARKK holds participate, or factors relating to specific companies in which ARKK invests. These can include stock movements, purchases or sales of securities by ARKK, government policies, litigation, and changes in interest rates, inflation, the financial condition of the securities' issuer or perceptions of the issuer, or economic conditions in general or specific to the issuer. Equity securities may also be particularly aligned with general movements in the stock market, and a rise in the broader market may positively affect the value of ARKK's equity investments.

Inverse Currency Risk: The Fund is indirectly exposed to inverse (opposite) currency risk due to any ARKK investments that are denominated in foreign currencies. As ARKK's net asset value is based on the U.S. dollar, shares of ARKK may gain value if the local currency of a foreign market appreciates against the U.S. dollar, even if the local currency value of ARKK's holdings goes down. Currency exchange rates can be volatile and unpredictable, which may beneficially affect ARKK, and therefore harm the Fund. Delays in converting or transferring U.S. dollars to foreign currencies for purchasing portfolio investments may enhance ARKK's performance, including because any delay could result in ARKK securing an investment opportunity at a lower price than originally intended, or accruing interest on cash holdings. These factors could result in gains to the share price of ARKK and therefore decreases to the Fund's share price.

Inverse Disruptive Innovation Risk: The Fund is indirectly inversely exposed to companies ARKK's investment adviser believes are capitalizing on disruptive innovation indirectly which subjects the Fund to the risks if such companies perform well. ARKK invests in companies that ARKK's investment adviser believes are capitalizing on disruptive innovation and developing technologies to displace older technologies or create new markets, and they may in fact do so. Companies that initially develop a novel technology may be able to capitalize on the technology. ARKK may invest in a company that does not currently derive any revenue from disruptive innovations or technologies, but such companies may derive significant revenue from disruptive innovations or technologies in the future. A disruptive innovation or technology may constitute a large portion of a company's overall business. As a result, the success of a disruptive innovation or technology may materially affect the value of the equity securities issued by the company and, in turn, benefit the share price of ARKK. As a result, the Fund may suffer significant losses.

Inverse Health Care Sector Risk: ARKK is exposed to companies in the health care sector which indirectly subjects the Fund to the inverse risks associated with such companies. The health care sector may benefit from government regulations and government health care programs, steady or increasing reimbursement for medical expenses, stability or reductions in the cost of medical products and services, and product liability claims, among other factors. In addition, the sector is driven by a consistent demand for healthcare services and products, which may be further amplified by an aging global population and increasing health awareness. Innovations in medical technology, treatments, and pharmaceuticals may lead to new product lines and services, potentially boosting company revenues and stock performance. Additionally, healthcare is somewhat insulated from economic downturns because medical care is a necessity rather than a luxury, leading to stable revenue streams. Government and private investment in healthcare, along with supportive regulations, can also contribute to the sector's growth. Additionally, strategic partnerships, mergers, and acquisitions within the industry can lead to enhanced research capabilities and accelerated growth, which may result in high growth potential. These combined factors can lead to robust performance for healthcare companies' stocks, which, in turn, would hurt the Fund's performance.

- *Inverse Biotechnology Company Risk:* Biotechnology stocks may perform well due to the sector's strong potential for innovation and breakthroughs in medicine. Biotechnology firms are often at the forefront of developing novel therapies, drugs, and medical technologies, addressing unmet medical needs and creating significant value when successful. Moreover, biotechnology companies often benefit from robust patent protections, providing them with a competitive edge and potential revenue streams.

- *Inverse Pharmaceutical Company Risk:* Pharmaceutical company stocks may perform well due to the essential and inelastic demand for their products, as medications and treatments may be crucial for health and well-being. These companies may have strong pipelines of drugs in various stages of development, offering the potential for substantial revenues upon successful approval and market entry. Additionally, their global reach and diversification across therapeutic areas provide resilience against market volatility. As a result, the Fund may suffer significant losses.

Inverse Information Technology Sector Risk: ARKK is exposed to companies in the information technology sector which indirectly subjects the Fund to the inverse risks associated with such companies. The information technology sector may experience robust performance, due to its pivotal role in the ongoing digital transformation in various industries. The sector's prospects may be buoyed by rapid technological innovation, escalating global internet penetration, and an augmented reliance on cloud computing and data analytics. As a result, the Fund may suffer significant losses.

Inverse Internet Companies Risk: Internet entities may prove well-positioned to capitalize from a continued growth in global internet adoption, and a significant migration of services and products to digital platforms. These entities often leverage network effects, where the incremental value of their services escalates with user proliferation, fostering strong user base expansion and the potential for material profit margins. Moreover, the extensive data troves they amass may enable precision-targeted advertising and service offerings, which may generate strong revenue streams. As a result, the Fund may suffer significant losses.

Inverse Semiconductor Companies Risk: The semiconductor industry may gain from escalating demand for electronic devices and the burgeoning proliferation of cutting-edge technologies such as 5G, artificial intelligence, and the Internet of Things (IoT). Semiconductors, being the primary components of electronic devices, will likely prove indispensable for ongoing technological innovation. Despite susceptibility to cyclical market dynamics, the industry's long-term outlook appears bullish, propelled by the continued pursuit of more sophisticated and potent semiconductor solutions across a multitude of sectors. As a result, the Fund may suffer significant losses.

Inverse Software Companies Risk: Software companies appear strategically positioned for growth, driven by demand for digital solutions across other industries. The transition towards subscription-based models (Software as a Service - SaaS) may provide a consistent revenue influx and fortify customer retention. These companies may benefit from substantial scalability, enabling user base augmentation with minimal incremental costs. Moreover, continued innovation and the development of specialized solutions tailored to diverse industry-specific requisites may present ample opportunities for growth and market penetration. As a result, the Fund may suffer significant losses.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the Underlying Security and Fund's portfolio of derivatives, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund, in particular, the value of the options contracts in which it invests are substantially influenced by the value of ARKK. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly moves with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in values options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain its synthetic cover put strategy through the use of options contracts, as the options contracts it holds are traded,

exercised or expire, it will enter into new options contracts, a practice referred to as “rolling.” If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared (“cleared derivatives”). In a transaction involving cleared derivatives, the Fund’s counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house (“clearing members”) can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member’s individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund’s clearing member. In addition, although clearing members guarantee performance of their clients’ obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member’s bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member’s customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund’s behalf, which heightens the risks associated with a clearing member’s default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund’s behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund’s behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of put option contracts, which limits the degree to which the Fund will benefit from decreases in value experienced by ARKK over the Put Period. This means that if ARKK experiences a decrease in value below the strike price of the sold put options during a Put Period, the Fund will likely not experience that increase to the same extent and any Fund gains may significantly differ from the level of ARKK losses over the Put Period. Additionally, because the Fund is limited in the degree to which it will participate in decreases in value experienced by ARKK over each Put Period, but has significant negative exposure to any increases in value experienced by ARKK over the Put Period, the NAV of the Fund may decrease over any given time period. The Fund’s NAV is dependent on the value of each options portfolio, which is based principally upon the inverse of the performance of ARKK. The Fund’s ability to benefit from ARKK losses will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold put option contracts and will vary from Put Period to Put Period. The value of the options contracts is affected by changes in the value and dividend rates of ARKK, changes in interest rates, changes in the actual or perceived volatility of ARKK and the remaining time to the options’ expiration, as well as trading conditions in the options market. As the price of ARKK changes and time moves towards the expiration of each Put Period, the value of the options contracts, and therefore the Fund’s NAV, will change. However, it is not expected for the Fund’s NAV to directly inversely correlate on a day-to-day basis with the returns of ARKK. The amount of time remaining until the options contract’s expiration date affects the impact that the value of the options contracts have on the Fund’s NAV, which may not be in full effect until the expiration date of the Fund’s options contracts. Therefore, while changes in the price of the ARKK will result in changes to the Fund’s NAV, the Fund generally anticipates that the rate of change in the Fund’s NAV will be different than the inverse of the changes experienced by ARKK.

Purchased OTM Call Options Risk. The Fund’s strategy is subject to potential losses if the Underlying Security shares increase in value, which may not be offset by the purchase of out-of-the-money (OTM) call options. The Fund purchases OTM calls to seek to manage (cap) the Fund’s potential losses from the Fund’s short exposure to the Underlying Security if it appreciates significantly in value. However, the OTM call options will cap the Fund’s losses only to the extent that the share price of the Underlying Security increases to a price that is at or above the strike price of the purchased OTM call options. Any increase in the share price of the Underlying Security to a price that is below the strike price of the purchased OTM call options will result in a corresponding loss for the Fund. For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund’s losses will be capped at approximately 70%. Notwithstanding the foregoing, if the OTM call options have a strike price that is approximately 100% above the then-current share price of the Underlying Security at the time of the call option purchase, and the share price of the Underlying Security increases by at least 100% during the term of the purchased OTM call options, the Fund will lose all its value. Lastly, the Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund’s value and/or any income otherwise generated by the Fund’s investment strategy.

Distribution Risk. As part of the Fund’s investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, the monthly distributions, if any, may consist of returns of capital, which would decrease the Fund’s NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Put Writing Strategy Risk. The path dependency (*i.e.*, the continued use) of the Fund's put writing (selling) strategy will impact the extent that the Fund participates in price decreases of ARKK and, in turn, the Fund's returns, both during the term of the sold put options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money put options having a one-month term, the Fund's participation in the negative price returns of ARKK will be capped at 7% in any given month. However, over a longer period (*e.g.*, 5 months), the Fund should not be expected to participate fully in the first 35% (*i.e.*, 5 months x 7%) of any negative price returns of ARKK, or the Fund may even lose money, even if the ARKK share price has decreased by at least that much over such period, if during any month over that period ARKK's share price decreased by less than 7%. This example illustrates that both the Fund's participation in the negative price returns of ARKK and its returns will depend not only on the price of ARKK but also on the path that ARKK takes over time.

Covered Put Spread Strategy Risk. The path dependency of the Fund's Covered Put Spread Strategy will impact the extent to which the Fund participates in the price decreases of the Underlying Security and, in turn, the Fund's returns, both during the term of the put spreads and over longer time periods. If, for example, each month the Fund were to sell a put spread where the written put option is 7% out-of-the-money and the purchased put option is 15% out-of-the-money, the Fund's participation in the negative price returns of the Underlying Security will be limited beyond the strike price of the purchased put option. However, over a longer period (*e.g.*, 5 months), the Fund should not be expected to participate fully in the first 35% (*i.e.*, 5 months x 7%) of any negative price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security's share price has decreased by at least that much over such period, if during any month over that period the Underlying Security's share price decreased by less than 7%. This example illustrates that both the Fund's participation in the negative price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time. Additionally, because the strategy involves purchasing a put option to offset the short put position, the net premium collected is reduced compared to a standalone put-writing strategy, potentially limiting the income generated and further constraining the Fund's returns in certain market conditions.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (*e.g.*, derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. This risk may be greater for the Fund as it seeks to have exposure to a single reference security as opposed to a more diverse portfolio like a traditional pooled investment. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at a market price that may be below, at or above the Fund’s NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange “circuit breaker” rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that reference a single security, such as ARKK’s shares being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund’s holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund’s expenses. These costs, in turn, could decrease the value of the Fund or of its distributions, if any. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund’s assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from realizing gains or achieving a high correlation with the inverse of ARKK. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Market Events Risk. The Fund’s investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund’s overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (ARKK), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Michael Venuto, Chief Investment Officer for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (Aps) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

When available, information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

SUMMARY INFORMATION

YieldMax™ Short NVDA Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income. The Fund's secondary investment objective is to seek inverse (opposite) exposure to the share price of the common stock of Nvidia Corporation ("NVDA" or "Underlying Security"), subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	<u>0.99%</u>

⁽¹⁾ The Fund's adviser will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), and litigation expenses, and other non-routine or extraordinary expenses.

⁽²⁾ Based on estimated amounts for the current fiscal year.

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem or hold all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. For the fiscal period from July 23, 2024 (commencement of operations) to October 31, 2024, the Fund's portfolio turnover rate was 18% of the average value of its portfolio.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect *inverse* exposure to the share price (*i.e.*, the price returns) of the common stock of Nvidia Corporation. The Fund's potential for gains from **decreases** in the share prices of NVDA's stock is limited. If the share price of the Underlying Security significantly decreases, the Fund will not fully benefit from the inverse of those decreases. The Fund will employ its investment strategy as it relates to the Underlying Security regardless of whether there are periods of strong market, economic, or other conditions and will not take temporary defensive positions during such periods.

As further described below, the Fund uses either a synthetic covered put strategy or synthetic covered put spread strategy to provide income and indirect *inverse* exposure to the share price returns of the Underlying Security, subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. That is, the Fund not only seeks to generate income from its options investments but also aims to derive additional gains when the share price of the Underlying Security **decreases**. The Fund's options contracts provide:

- indirect inverse exposure to the share price returns of the Underlying Security,
- current income from the option premiums, and
- a limit on the Fund's participation in gains, if any, arising from **decreases** in the share price of the Underlying Security.

For more information, see sections "The Fund's Use of Option Contracts," "Synthetic Covered Put Strategy" and "Synthetic Covered Put Spread Strategy" below.

The Fund's investment adviser is Tidal Investments LLC ("Tidal" or the "Adviser").

Why invest in the Fund?

- The Fund seeks to benefit when the share price of the Underlying Security decreases. The Fund's potential corresponding benefit from decreases in the share price of the Underlying Security is limited.
- The Fund seeks to generate monthly income, which is not dependent on the price depreciation of the Underlying Security.
- The Fund seeks to manage potential losses (i.e., cap losses if the share price of the Underlying Security experiences significant gains) by purchasing out-of-the-money call options (further described below).

Although the Fund may not fully benefit from decreases in the Underlying Security's share price, the Fund's portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security. Further, an Investment in the Fund differs from "short selling" or "shorting" the Underlying Security.

- The Fund's strategy will limit its potential gains if the Underlying Security shares decrease in value.
- The Fund's strategy is subject to potential losses if the Underlying Security shares increase in value, which may not be offset by income received by the Fund or by the purchase of out-of-the-money call options (further described below).
- The Fund does not invest directly in the Underlying Security.
- The Fund does not directly short the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund's Use of Option Contracts

As part of the Fund's synthetic covered put strategy and synthetic covered put spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® ("FLEX") call and put option contracts that are based on the share price of the Underlying Security. The Fund may use European FLEX options as well as options that are exercisable at any time (i.e. American style options contracts).

See the "Additional Information About the Fund" section for an overview of put and call option terminology.

Synthetic Covered Put Strategy Overview

In seeking to achieve its investment objective, the Fund will implement a "*synthetic* covered put" strategy using the standardized exchange-traded and FLEX options.

- A *traditional* covered put strategy is an investment strategy where an investor (the Fund) sells a put option on an Underlying Security it is short.
- A *synthetic* covered put strategy is similar to a traditional covered put strategy in that the investor sells a put option that is based on the value of the Underlying Security. However, in a synthetic covered put strategy, the investor (the Fund) does not actually short the Underlying Security, but rather seeks to synthetically replicate a short position in the Underlying Security (i.e., it seeks inverse exposure to the share price movements of the Underlying Security) through the use of various investment instruments.

The Fund's synthetic covered put strategy consists of the following four elements, each of which is described in greater detail below:

- Synthetic short exposure to the Underlying Security, which allows the Fund to seek to participate, on an inverse basis, in changes, up or down, to the price of the Underlying Security's shares.
- Covered put strategies, which allows the Fund to generate income.

- U.S. Treasuries, which are used for collateral for the options, and which also generate income.
- Out-of-the money (“OTM”) call options, which are purchased to seek to manage (cap) the Fund’s potential losses from the Fund’s short exposure to the Underlying Security if it appreciates significantly in value.

However, this loss capping works only if the Underlying Security’s share price rises to or above the strike price of the OTM call options that were purchased. If the share price increases but stays below the strike price of these options, the Fund will incur losses proportionate to this price increase.

Synthetic Covered Put Strategy

1. Synthetic Short Exposure

To achieve a synthetic short exposure to the Underlying Security, the Fund may write (sell) the Underlying Security call options and, simultaneously, go long (buy) the Underlying Security put options to try to replicate inverse exposure to the share price movements of the Underlying Security. The put options purchased by the Fund and the call options sold by the Fund will generally have three-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The Fund uses the proceeds from selling call options to help pay for the purchased put options. The combination of the long put options and sold call options provides the Fund with investment exposure equal to approximately -100% of the Underlying Security’s share price changes for the duration of the applicable options exposure (i.e., the synthetic short position is expected to gain value when the share price of the Underlying Security decreases and to lose value when the share price of the Underlying Security increases).

2. Covered Put Strategies

Covered Put Writing Strategy

As part of its strategy, the Fund will write (sell) put option contracts on the Underlying Security to generate income. The put options written (sold) by the Fund will generally have 1-month or less expiration dates (the “Put Period”) and a strike price that is approximately 0%-15% below the then-current Underlying Security’s share price at the time of such sales.

It is important to note that the sale of the Underlying Security put option contracts will limit the Fund’s participation in decreases in the Underlying Security’s share price. If the share price of the Underlying Security decreases, the above-referenced synthetic short exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security’s share price decreases beyond the strike price of one or more of the sold (short) put option contracts, the Fund will lose money on those short put positions, and the losses will, in turn, limit the gains of the Fund’s synthetic short exposure. As a result, the Fund’s overall strategy (i.e., the combination of the synthetic short exposure to the Underlying Security and the sold (short) Underlying Security put positions) will limit the Fund’s participation in decreases in the Underlying Security’s share price beyond a certain point.

Covered Put Spread Strategy

The Adviser will employ the Covered Put Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Put Strategy. The Fund may write (sell) credit put spreads (described below) rather than stand-alone put option contracts to seek greater participation in the potential decline of its Underlying Security’s share price, while still generating net premium income. The Adviser will primarily employ this covered put spread strategy when it believes that the share price of its Underlying Security is likely to decline significantly in the short term (e.g., following a substantial market rally or overall negative market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit put spreads may prove more advantageous to the Fund’s total return than the covered put strategy.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund’s synthetic covered put strategy.

4. OTM Call Purchasing

The Fund purchases out-of-the-money (OTM) calls to seek to manage (cap) the Fund’s potential losses from the Fund’s short exposure to the Underlying Security if it appreciates significantly in value.

OTM call options are a type of options contract where the strike price is set higher than the current market price of the underlying asset, referred to here as the Underlying Security. When the Fund buys these OTM call options, it is essentially setting a fixed price level. This level acts as a cap on the Fund’s potential losses that might arise from its indirect inverse

exposure to the share price of the Underlying Security. **However, this loss capping works only if the Underlying Security's share price rises to or above the strike price of the OTM call options that were purchased. If the share price increases but stays below the strike price of these options, the Fund will incur losses proportionate to this price increase.**

For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund's losses will be capped at approximately 70%.

The Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund's value and/or any income otherwise generated by the Fund's investment strategy.

The Fund intends to maintain its synthetic covered put strategy through the use of options contracts. As the options contracts it holds are traded, exercised or expire, it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) put option contracts on the Underlying Security as described above. The income, in the form of option premiums received from such option sales, will be primarily influenced by the volatility of the Underlying Security shares, although other factors, including interest rates, will also impact the level of income.
- Investing in short-term U.S. Treasury securities. The income generated by such securities will be influenced by interest rates at the time of investment.
- In addition, the Fund's use of the covered put spread strategy may occasionally allow it to capture a substantial portion of any significant decrease in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the put options, and the Fund's distributions may include some of those profits.

The Fund's income from writing (selling) put option contracts on the Underlying Security will be partially offset (reduced) due to the premiums paid for purchasing OTM call options, which are purchased to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value.

Fund Portfolio

YieldMax™ Short NVDA Option Income Strategy ETF – Principal Holdings			
Portfolio Holdings (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity	Primary Purpose of Holding
Purchased put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide exposure to negative price returns of the Underlying Security.</p> <p>If the share price of the Underlying Security decreases, these options will generate corresponding increases to the Fund.</p>	3-month to 6-month expiration dates	Combined with the sold call options, creates a synthetic short position on the Underlying Security.
Sold call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased put options described above.</p> <p>However, the sold call option contracts provide exposure to the full extent of any share price increases experienced by the Underlying Security.</p>	3-month to 6-month expiration dates	Combined with the purchased put options, creates a synthetic short position on the Underlying Security.

Sold (short) put option contracts (<i>Covered Put Writing Strategy</i>)	The strike price is approximately 0%-15% below the then-current share price of the Underlying Security at the time of sale. They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced.	1-month or less expiration dates	Generate income for the Fund in the form of premiums, in return for capping the returns of the Fund's synthetic short position.
Sold (short) put option contracts (<i>Covered Put Spread Strategy</i>)	The strike price is approximately 0%-15% below than the then-current share price of the Fund's Underlying Security at the time of sale. Sold put option contracts provide inverse exposure to the full extent of any declines in the value experienced by the Fund's Underlying Security, minus the premium received.	1-month or less expiration dates	Combined with the purchased put option contract below, generates income for the Fund in the form of net premiums, in return for limiting the returns of the Fund's synthetic short position.
Purchased put option contracts (<i>Covered Put Spread Strategy</i>)	"out-of-the-money" (i.e., the strike price is below the strike price of the corresponding Covered Put Spread Strategy sold put). Bought put option contracts provide exposure to the full extent of any declines in the value experienced by the Fund's Underlying Security below the option's strike price.	1-month or less expiration dates	Combined with the Sold (short) put option contracts above, generates income for the Fund in the form of net premiums, in return for limiting the returns of the Fund's synthetic short position.
U.S Treasury Securities and Cash	Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government. These instruments are used as collateral for the Fund's derivative investments. They will also generate income.	6-month to 2-year maturities	Collateral for the options positions and some additional income.
Purchased call option contracts (<i>OTM Call Purchasing</i>)	"out-of-the-money" (i.e., the strike price is set above the then-current share price of the Underlying Security at the time of purchase). They limit the Fund's potential losses if the share price of the Underlying Security experiences significant gains. They represent a cost (debit) that will partially offset (reduce) the net premium received from the sale of the put options.	1-month to 6-month expiration dates	Limit the maximum loss of the Fund's synthetic short position.

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund's net assets and the market value of the options package is expected to be between 0% and 50% of the Fund's net assets. The combination of these investment instruments provides indirect inverse investment exposure to the share price of the Underlying Security equal to at least 100% of the Fund's total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide inverse exposure to the performance of NVDA.

The Fund is classified as "non-diversified" under the 1940 Act.

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Nvidia Corporation

Nvidia Corporation is a technology company that designs graphics processing units ("GPUs"). Nvidia Corporation has created GPU-based visual computing and accelerated computing platforms that address four separate markets: gaming, professional visualization, data center, and automotive. Nvidia Corporation is listed on Nasdaq. The aggregate market value of the voting stock held by non-affiliates of Nvidia Corporation as of the most recent available data at time of drafting this prospectus was approximately \$2.7 trillion (based on the closing sales price of Nvidia Corporation's common stock as reported by Nasdaq on July 26, 2024).

Nvidia Corporation is registered under the Securities Exchange Act of 1934, as amended (the “Exchange Act”). Information provided to or filed with the SEC by Nvidia Corporation pursuant to the Exchange Act can be located by reference to the SEC file number 000-23985 through the SEC’s website at www.sec.gov. In addition, information regarding Nvidia Corporation may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to NVDA or other securities of Nvidia Corporation. The Fund has derived all disclosures contained in this document regarding Nvidia Corporation from the publicly available documents. In connection with the offering of the securities, none of the Fund, the Trust, the Adviser, the Adviser, or their respective affiliates has participated in the preparation of such documents or made any due diligence inquiry with respect to Nvidia Corporation. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding Nvidia Corporation is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of Nvidia Corporation (and therefore the price of Nvidia Corporation at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning Nvidia Corporation could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of NVDA.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH NVIDIA CORPORATION.

Due to the Fund’s investment strategy, the Fund’s economic exposure is inversely related to the industry assigned to NVDA. As of the January 21, 2025, NVDA is assigned to the semiconductors and semiconductor equipment industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”) per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus titled “Additional Information About the Funds—Principal Risks of Investing in the Funds.”

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

NVDA Price Appreciation Risk. As part of the Fund’s synthetic covered put strategy, the Fund purchases and sells call and put options that are based on the share price of NVDA common stock. This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund’s indirect inverse exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security’s share price increases. If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses. The Fund may also be subject to the following risks:

Indirect Investment in NVDA Risk. Nvidia Corporation is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of Nvidia Corporation but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be adversely impacted by increases in the share price of the Underlying Security.

Underlying Security Trading Risk. The trading price of the Underlying Security may become less volatile over time, which could have an adverse impact on the Fund’s performance. The Fund’s synthetic covered put strategy is designed to benefit from significant price fluctuations in the Underlying Security. However, if the Underlying Security experiences reduced volatility, it may lead to a decrease in the Fund’s potential returns.

Historically, the Underlying Security’s shares have exhibited substantial price swings, but there is a possibility that market conditions, investor sentiment, or other factors may contribute to decreased volatility in the future. Such reduced volatility could limit the opportunities for the Fund to profit from its credit spread positions, as the strategy relies on price differentials between options with varying strike prices.

It’s important to note that the Fund’s performance is closely tied to the dynamics of the Underlying Security’s share price. As such, any significant reduction in the volatility of the Underlying Security’s share price may present challenges for the Fund’s synthetic covered put strategy and may affect its ability to achieve its investment objectives. Investors should consider this potential risk when evaluating their investment in the Fund.

NVDA Good Performance Risk. Nvidia Corporation may meet or exceed its publicly announced expectations or guidelines regarding its business, which could potentially lead to a rise in the share price of the Underlying Security. Nvidia Corporation regularly provides guidance concerning its anticipated financial and business performance, including sales and production projections, future revenues, gross margins, profitability, and cash flows. However, forecasting future events and identifying key factors affecting business conditions inherently involves uncertainty. Nvidia Corporation's guidance may ultimately prove accurate or may prove underestimated, as it relies on assumptions such as global and local economic conditions, anticipated production and sales volumes, average sales prices, supplier and commodity costs, and planned cost reductions. If Nvidia Corporation's guidance is accurate or varies positively from actual results, NVDA's share price could increase significantly and, as a result, the Fund may suffer significant losses.

NVDA is a leader in the semiconductor industry, and may be well-positioned for sustained performance, driven by its strong market share in graphics processing units (GPUs) and newer ventures in artificial intelligence (AI) and autonomous driving. As the global economy becomes increasingly digitized, NVDA's GPUs may remain integral for high-performance computing, gaming, and data centers, sectors, which may continue to experience solid growth. NVDA's foray into AI, with its comprehensive ecosystem and hardware suited for machine learning workloads, may place it at the nexus of an industry poised for substantial growth. Additionally, its strategic partnerships and advancements in the autonomous vehicle space may positively augment its diversified portfolio. With its R&D, strong intellectual property, and strategic acquisitions, Nvidia may capitalize on an expanding demand across these sectors, all of which could significantly increase the share price of NVDA's common stock. As a result, the Fund may suffer significant losses.

Inverse Semiconductor Companies Risk: The semiconductor industry may gain from escalating demand for electronic devices and the burgeoning proliferation of cutting-edge technologies such as 5G, artificial intelligence, and the Internet of Things (IoT). Semiconductors, being the primary components of electronic devices, will likely prove indispensable for ongoing technological innovation. Despite susceptibility to cyclical market dynamics, the industry's long-term outlook appears bullish, propelled by the continued pursuit of more sophisticated and potent semiconductor solutions across a multitude of sectors, all of which could significantly increase the share price of NVDA's common stock. As a result, the Fund may suffer significant losses.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the Underlying Security and the Fund's portfolio of derivatives, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund, in particular, the value of the options contracts in which it invests are substantially influenced by the value of NVDA. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly moves with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in values options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain its synthetic covered put strategy through the use of options contracts, as the options contracts it holds are traded, exercised or expire, it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared

derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of put option contracts, which limits the degree to which the Fund will benefit from decreases in value experienced by NVDA over the Put Period. This means that if NVDA experiences a decrease in value below the strike price of the sold put options during a Put Period, the Fund will likely not experience that increase to the same extent and any Fund gains may significantly differ from the level of NVDA losses over the Put Period. Additionally, because the Fund is limited in the degree to which it will participate in decreases in value experienced by NVDA over each Put Period, but has significant negative exposure to any increases in value experienced by NVDA over the Put Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the inverse of the performance of NVDA. The Fund's ability to benefit from NVDA losses will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold put option contracts and will vary from Put Period to Put Period. The value of the options contracts is affected by changes in the value and dividend rates of NVDA, changes in interest rates, changes in the actual or perceived volatility of NVDA and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of NVDA changes and time moves towards the expiration of each Put Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly inversely correlate on a day-to-day basis with the returns of NVDA. The amount of time remaining until the options contract's expiration date affects the impact that the value of the options contracts have on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the NVDA will result in changes to the Fund's NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than the inverse of the changes experienced by NVDA.

Purchased OTM Call Options Risk. The Fund's strategy is subject to potential losses if the Underlying Security shares increase in value, which may not be offset by the purchase of out-of-the-money (OTM) call options. The Fund purchases OTM calls to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value. However, the OTM call options will cap the Fund's losses only to the extent that the share price of the Underlying Security increases to a price that is at or above the strike price of the purchased OTM call options. Any increase in the share price of the Underlying Security to a price that is below the strike price of the purchased OTM call options will result in a corresponding loss for the Fund. For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund's losses will be capped at approximately 70%. Notwithstanding the foregoing, if the OTM call options have a strike price that is approximately 100% above the then-current share price of the Underlying Security at the time of the call option purchase, and the share price of the Underlying Security increases by at least 100% during the term of the purchased OTM call options, the Fund will lose all its value. Lastly, the Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund's value and/or any income otherwise generated by the Fund's investment strategy.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, the monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Put Writing Strategy Risk. The path dependency (*i.e.*, the continued use) of the Fund's put writing (selling) strategy will impact the extent that the Fund participates in the price decreases of NVDA and, in turn, the Fund's returns, both during the term of the sold put

options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money put options having a one-month term, the Fund's participation in the negative price returns of NVDA will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of any negative price returns of NVDA, or the Fund may even lose money, even if the NVDA share price has decreased by at least that much over such period, if during any month over that period NVDA's share price decreased by less than 7%. This example illustrates that both the Fund's participation in the negative price returns of NVDA and its returns will depend not only on the price of NVDA but also on the path that NVDA takes over time.

Covered Put Spread Strategy Risk. The path dependency of the Fund's Covered Put Spread Strategy will impact the extent to which the Fund participates in the price decreases of the Underlying Security and, in turn, the Fund's returns, both during the term of the put spreads and over longer time periods. If, for example, each month the Fund were to sell a put spread where the written put option is 7% out-of-the-money and the purchased put option is 15% out-of-the-money, the Fund's participation in the negative price returns of the Underlying Security will be limited beyond the strike price of the purchased put option. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of any negative price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security's share price has decreased by at least that much over such period, if during any month over that period the Underlying Security's share price decreased by less than 7%. This example illustrates that both the Fund's participation in the negative price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time. Additionally, because the strategy involves purchasing a put option to offset the short put position, the net premium collected is reduced compared to a standalone put-writing strategy, potentially limiting the income generated and further constraining the Fund's returns in certain market conditions.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. This risk may be greater for the Fund as it seeks to have exposure to a single reference security as opposed to a more diverse portfolio like a traditional pooled investment. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at a

market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that reference a single security, such as NVDA common stock being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. These costs, in turn, could decrease the value of the Fund or of its distributions, if any. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from realizing gains or achieving a high correlation with the inverse of NVDA. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

Newer Fund Risk. The Fund is a recently organized management investment company with limited operating history. As a result, prospective investors have a limited track record on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (NVDA), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Michael Venuto, Chief Investment Officer for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (Aps) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

Information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

SUMMARY INFORMATION

YieldMax™ Short COIN Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income. The Fund's secondary investment objective is to seek inverse (opposite) exposure to the share price of the common stock of Coinbase Global, Inc. ("COIN" or "Underlying Security"), subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses (includes dividend, tax and broker expense) ⁽²⁾	0.01%
Total Annual Fund Operating Expenses	<u>1.00%</u>

⁽¹⁾ The Fund's adviser will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), and litigation expenses, and other non-routine or extraordinary expenses.

⁽²⁾ Based on estimated amounts for the current fiscal year.

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem or hold all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$102	\$318

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. For the fiscal period from July 9, 2024 (commencement of operations) to October 31, 2024, the Fund's portfolio turnover rate was 38% of the average value of its portfolio.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect *inverse* exposure to the share price (*i.e.*, the price returns) of the common stock of Coinbase Global, Inc. The Fund's potential for gains from **decreases** in the share price of COIN's stock is limited. If the share price of the Underlying Security significantly decreases, the Fund will not fully benefit from the inverse of those decreases. The Fund will employ its investment strategy as it relates to the Underlying Security regardless of whether there are periods of strong market, economic, or other conditions and will not take temporary defensive positions during such periods.

As further described below, the Fund uses either a synthetic covered put strategy or synthetic covered put spread strategy to provide income and indirect *inverse* exposure to the share price returns of the Underlying Security, subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. That is, the Fund not only seeks to generate income from its options investments but also aims to derive additional gains when the share price of the Underlying Security **decreases**. The Fund's options contracts provide:

- indirect inverse exposure to the share price returns of the Underlying Security,
- current income from the option premiums, and
- a limit on the Fund's participation in gains, if any, arising from the **decreases** in the share price of the Underlying Security.

For more information, see sections "The Fund's Use of Option Contracts," "Synthetic Covered Put Strategy" and "Synthetic Covered Put Spread Strategy" below.

The Fund's investment adviser is Tidal Investments LLC ("Tidal" or the "Adviser").

Why invest in the Fund?

- The Fund seeks to benefit when the share price of the Underlying Security decreases. The Fund's potential corresponding benefit from decreases in the share price of the Underlying Security is limited.
- The Fund seeks to generate monthly income, which is not dependent on the price depreciation of the Underlying Security.
- The Fund seeks to manage potential losses (i.e., cap losses if the share price of the Underlying Security experiences significant gains) by purchasing out-of-the-money call options (further described below).

Although the Fund may not fully benefit from decreases in the Underlying Security's share price, the Fund's portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security. Further, an Investment in the Fund differs from "short selling" or "shorting" the Underlying Security.

- The Fund's strategy will limit its potential gains if the Underlying Security shares decrease in value.
- The Fund's strategy is subject to potential losses if the Underlying Security shares increase in value, which may not be offset by income received by the Fund or by the purchase of out-of-the-money call options (further described below).
- The Fund does not invest directly in the Underlying Security.
- The Fund does not directly short the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund's Use of Option Contracts

As part of the Fund's synthetic covered put strategy and synthetic covered put spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® ("FLEX") call and put option contracts that are based on the share price of the Underlying Security. The Fund may use European FLEX options as well as options that are exercisable at any time (i.e. American style options contracts).

See the "Additional Information About the Fund" section for an overview of put and call option terminology.

Synthetic Covered Put Strategy Overview

In seeking to achieve its investment objective, the Fund may implement a "synthetic covered put" strategy using the standardized exchange-traded and FLEX options. The Fund uses a synthetic put strategy rather than a traditional one, utilizing Treasuries as collateral to potentially achieve higher returns than those of the Underlying Security.

- A *traditional* covered put strategy is an investment strategy where an investor (the Fund) sells a put option on an Underlying Security it is short.
- A *synthetic* covered put strategy is similar to a traditional covered put strategy in that the investor sells a put option that is based on the value of the Underlying Security. However, in a synthetic covered put strategy, the investor (the Fund) does not actually short the Underlying Security, but rather seeks to synthetically replicate a short position in the Underlying Security (i.e., it seeks inverse exposure to the share price movements of the Underlying Security) through the use of various investment instruments.

The Fund's synthetic covered put strategy consists of the following four elements, each of which is described in greater detail below:

- Synthetic short exposure to the Underlying Security, which allows the Fund to seek to participate, on an inverse basis, in changes, up or down, to the price of the Underlying Security's shares.
- Covered put strategies, which allows the Fund to generate income.

- U.S. Treasuries, which are used for collateral for the options, and which also generate income.
- Out-of-the money (“OTM”) call options, which are purchased to seek to manage (cap) the Fund’s potential losses from the Fund’s short exposure to the Underlying Security if it appreciates significantly in value.

However, this loss capping works only if the Underlying Security’s share price rises to or above the strike price of the OTM call options that were purchased. If the share price increases but stays below the strike price of these options, the Fund will incur losses proportionate to this price increase.

Synthetic Covered Put Strategy

1. Synthetic Short Exposure

To achieve a synthetic short exposure to the Underlying Security, the Fund will write (sell) the Underlying Security call options and, simultaneously, go long (buy) the Underlying Security put options to try to replicate inverse exposure to the share price movements of the Underlying Security. The put options purchased by the Fund and the call options sold by the Fund will generally have three-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The Fund uses the proceeds from selling call options to help pay for the purchased put options. The combination of the long put options and sold call options provides the Fund with investment exposure equal to approximately -100% of the Underlying Security’s share price changes for the duration of the applicable options exposure (i.e., the synthetic short position is expected to gain value when the share price of the Underlying Security decreases and to lose value when the share price of the Underlying Security increases).

2. Covered Put Strategies

Covered Put Writing Strategy

As part of its strategy, the Fund will write (sell) put option contracts on the Underlying Security to generate income. The put options written (sold) by the Fund will generally have 1- month or less expiration dates (the “Put Period”) and a strike price that is approximately 0%-15% below the then-current Underlying Security share price at the time of such sales.

It is important to note that the sale of the Underlying Security put option contracts will limit the Fund’s participation in decreases in the Underlying Security’s share price. If the share price of the Underlying Security decreases, the above-referenced synthetic short exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security’s share price decreases beyond the strike price of one or more of the sold (short) put option contracts, the Fund will lose money on those short put positions, and the losses will, in turn, limit the gains the Fund’s synthetic short exposure. As a result, the Fund’s overall strategy (i.e., the combination of the synthetic short exposure to the Underlying Security and the sold (short) Underlying Security put positions) will limit the Fund’s participation in decreases in the Underlying Security’s share price beyond a certain point.

Covered Put Spread Strategy

The Adviser will employ the Covered Put Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Put Strategy. The Fund may write (sell) credit put spreads (described below) rather than stand-alone put option contracts to seek greater participation in the potential decline of its Underlying Security’s share price, while still generating net premium income. The Adviser will primarily employ this covered put spread strategy when it believes that the share price of its Underlying Security is likely to decline significantly in the short term (e.g., following a substantial market rally or overall negative market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit put spreads may prove more advantageous to the Fund’s total return than the covered put strategy.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund’s synthetic covered put strategy.

4. OTM Call Purchasing

The Fund purchases out-of-the-money (OTM) calls to seek to manage (cap) the Fund’s potential losses from the Fund’s short exposure to the Underlying Security if it appreciates significantly in value. OTM call options are options contracts where the strike price is set above the current market price of the underlying asset, in this case, the Underlying Security. .

OTM call options are a type of options contract where the strike price is set higher than the current market price of the underlying asset, referred to here as the Underlying Security. When the Fund buys these OTM call options, it is essentially setting a fixed price level. This level acts as a cap on the Fund’s potential losses that might arise from its indirect inverse

exposure to the share price of the Underlying Security. **However, this loss capping works only if the Underlying Security's share price rises to or above the strike price of the OTM call options that were purchased. If the share price increases but stays below the strike price of these options, the Fund will incur losses proportionate to this price increase.**

For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund's losses will be capped at approximately 70%.

The Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund's value and/or any income otherwise generated by the Fund's investment strategy.

The Fund intends to maintain its synthetic covered put strategy through the use of options contracts. As the options contracts it holds are traded, exercised or expire, it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) put option contracts on the Underlying Security as described above. The income, in the form of option premiums received from such option sales, will be primarily influenced by the volatility of the Underlying Security shares, although other factors, including interest rates, will also impact the level of income.
- Investing in short-term U.S. Treasury securities. The income generated by such securities will be influenced by interest rates at the time of investment.
- In addition, the Fund's use of the covered put spread strategy may occasionally allow it to capture a substantial portion of any significant decrease in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the put options, and the Fund's distributions may include some of those profits.

The Fund's income from writing (selling) put option contracts on the Underlying Security will be partially offset (reduced) due to the premiums paid for purchasing OTM call options, which are purchased to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value.

Fund Portfolio

The Fund's principal holdings related to the Covered Put Strategy are described below:

YieldMax™ Short COIN Option Income Strategy ETF – Principal Holdings			
Portfolio Holdings (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity	Primary Purpose of Holding
Purchased put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide exposure to negative price returns of the Underlying Security.</p> <p>If the share price of the Underlying Security decreases, these options will generate corresponding increases to the Fund.</p>	3-month to 6-month expiration dates	Combined with the sold call options, creates a synthetic short position on the Underlying Security.
Sold call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased put options described above.</p>	3-month to 6-month expiration dates	Combined with the purchased put options, creates a synthetic short position on the Underlying Security.

	However, the sold call option contracts provide exposure to the full extent of any share price increases experienced by the Underlying Security.		
Sold (short) put option contracts (<i>Covered Put Writing Strategy</i>)	The strike price is approximately 0%-15% below the then-current share price of the Underlying Security at the time of sale. They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced.	1-month or less expiration dates	Generate income for the Fund in the form of premiums, in return for capping the returns of the Fund's synthetic short position.
Sold (short) put option contracts (<i>Covered Put Spread Strategy</i>)	The strike price is approximately 0%-15% below than the then-current share price of the Fund's Underlying Security at the time of sale. Sold put option contracts provide inverse exposure to the full extent of any declines in the value experienced by the Fund's Underlying Security, minus the premium received.	1-month or less expiration dates	Combined with the purchased put option contract below, generates income for the Fund in the form of net premiums, in return for limiting the returns of the Fund's synthetic short position.
Purchased put option contracts (<i>Covered Put Spread Strategy</i>)	"out-of-the-money" (i.e., the strike price is below the strike price of the corresponding Covered Put Spread Strategy sold put). Bought put option contracts provide exposure to the full extent of any declines in the value experienced by the Fund's Underlying Security below the option's strike price.	1-month or less expiration dates	Combined with the Sold (short) put option contracts above, generates income for the Fund in the form of net premiums, in return for limiting the returns of the Fund's synthetic short position.
U.S Treasury Securities and Cash	Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government. These instruments are used as collateral for the Fund's derivative investments. They will also generate income.	6-month to 2-year maturities	Collateral for the options positions and some additional income.
Purchased call option contracts (<i>OTM Call Purchasing</i>)	"out-of-the-money" (i.e., the strike price is set above the then-current share price of the Underlying Security at the time of purchase). They limit the Fund's potential losses if the share price of the Underlying Security experiences significant gains. They represent a cost (debit) that will partially offset (reduce) the net premium received from the sale of the put options.	1-month to 6-month expiration dates	Limit the maximum loss of the Fund's synthetic short position.

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund's net assets and the market value of the options package is expected to be between 0% and 50% of the Fund's net assets. The combination of these investment instruments provides indirect inverse investment exposure to the share price of the Underlying Security equal to at least 100% of the Fund's total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide inverse exposure to the performance of COIN.

The Fund is classified as "non-diversified" under the 1940 Act.

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Coinbase Global, Inc.

Coinbase Global, Inc. offers a variety of products and services that enable individuals, businesses, and developers to participate in the crypto economy. It provides customers around the world with a platform for buying, selling, transferring, and storing digital assets. Coinbase Global, Inc. is listed on Nasdaq. The aggregate market value of the voting and non-voting stock held by non-affiliates of

Coinbase Global, Inc. as of the most recent available data at time of drafting this prospectus (June 30, 2024), was approximately \$44.6 billion based on the closing sales price of Coinbase Global, Inc.'s Class A common stock as reported on Nasdaq on that date.

Coinbase Global, Inc. is registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Information provided to or filed with the SEC by Coinbase Global, Inc. pursuant to the Exchange Act can be located by reference to the SEC file number 001-40289 through the SEC's website at www.sec.gov. In addition, information regarding Coinbase Global, Inc. may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to COIN or other securities of Coinbase Global, Inc. The Fund has derived all disclosures contained in this document regarding Coinbase Global, Inc. from the publicly available documents. In connection with the offering of the securities, none of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such documents or made any due diligence inquiry with respect to Coinbase Global, Inc. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding Coinbase Global, Inc. is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of Coinbase Global, Inc. (and therefore the price of Coinbase Global, Inc. at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning Coinbase Global, Inc. could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of COIN.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH COINBASE GLOBAL, INC.

Due to the Fund's investment strategy, the Fund's economic exposure is inversely related to the industry assigned to COIN. As of January 21, 2025, COIN is assigned to the capital markets industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

COIN Price Appreciation Risk. As part of the Fund's synthetic covered put strategy, the Fund purchases and sells call and put option contracts that are based on the share price of COIN common stock. This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund's indirect inverse exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security's share price increases. If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses. The Fund may also be subject to the following risks:

Indirect Investment in COIN Risk. Coinbase Global, Inc. is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of Coinbase Global, Inc. but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be adversely impacted by increases in the share price of the Underlying Security.

Underlying Security Trading Risk. The trading price of the Underlying Security may become less volatile over time, which could have an adverse impact on the Fund's performance. The Fund's synthetic covered put strategy is designed to benefit from significant price fluctuations in the Underlying Security. However, if the Underlying Security experiences reduced volatility, it may lead to a decrease in the Fund's potential returns.

Historically, the Underlying Security's shares have exhibited substantial price swings, but there is a possibility that market conditions, investor sentiment, or other factors may contribute to decreased volatility in the future. Such reduced volatility could limit the opportunities for the Fund to profit from its credit spread positions, as the strategy relies on price differentials between options with varying strike prices.

It's important to note that the Fund's performance is closely tied to the dynamics of the Underlying Security's share price. As such, any significant reduction in the volatility of the Underlying Security's share price may present challenges for the Fund's synthetic covered put strategy and may affect its ability to achieve its investment objectives. Investors should consider this potential risk when evaluating their investment in the Fund.

COIN Good Performance Risk. Coinbase Global, Inc. may meet or exceed its publicly announced expectations or guidelines regarding its business, which could potentially lead to a rise in the share price of the Underlying Security. Coinbase Global, Inc. regularly provides guidance concerning its anticipated financial and business performance, including sales and production projections, future revenues, gross margins, profitability, and cash flows. However, forecasting future events and identifying key factors affecting business conditions inherently involves uncertainty. Coinbase Global, Inc.'s guidance may ultimately prove accurate or may prove underestimated, as it relies on assumptions such as global and local economic conditions, anticipated production and sales volumes, average sales prices, supplier and commodity costs, and planned cost reductions. If Coinbase Global, Inc.'s guidance is accurate or varies positively from actual results, COIN's share price increase significantly and, as a result, the Fund may suffer significant losses.

Inverse Digital Assets Sector Risk: The digital assets sector encapsulates a wide array of digital currencies, tokens, and other forms of digital value representation, including non-fungible tokens (NFTs). Digital assets have the potential to redefine asset ownership, transferability, and accessibility, leveraging the principles of decentralization and blockchain technology. The sector may experience substantial growth, especially if mainstream acceptance and institutional interest continues or accelerates. Digital assets offer diversification benefits, given their low correlation with traditional asset classes, which could lead to their inclusion in a broader range of investment portfolios. Moreover, the progressive regulatory clarity and the development of sophisticated trading, custody, and risk management solutions are factors that could foster the sector's growth, all of which could significantly increase the share price of COIN's common stock. Further, a number of bitcoin-focused ETFs (e.g., ETFs that invest in spot bitcoin) have recently commenced operations. These bitcoin-focused ETFs may similarly foster the sector's growth, which could significantly increase the share price of COIN's common stock. As a result, the Fund may suffer significant losses.

Inverse Financials Sector Risk: The financials sector, encompassing banks, insurance companies, and diversified financial services, may experience growth, driven by a combination of macroeconomic factors and technological innovation. As interest rates rise, banks stand to benefit from widening net interest margins, improving profitability. Insurers may see enhanced investment income as yields increase, bolstering their financial strength. Moreover, the sector is undergoing a technological transformation, with the adoption of digital banking, fintech innovations, and data analytics enhancing operational efficiencies, customer engagement, and risk management capabilities. This digital evolution may unlock new revenue streams and improve competitive positioning, all of which could significantly increase the share price of COIN's common stock. As a result, the Fund may suffer significant losses.

Inverse Blockchain Sector Risk: The blockchain sector represents a frontier of technological innovation, underpinning not only cryptocurrencies but a spectrum of applications across industries. Its intrinsic attributes of immutability, transparency, and efficiency may make it a compelling foundation for solutions in supply chain management, identity verification, and beyond. If more enterprises and governments recognize its potential to streamline operations and reduce costs, the adoption of blockchain technology may accelerate. The sector may also benefit from the growing interest in decentralized finance (DeFi) and the tokenization of assets, which expand the use cases for blockchain. Investments in companies that develop, implement, or adopt blockchain technology could thus be well-positioned to capitalize on the sector's growth, as it moves from experimental applications to mainstream adoption, all of which could significantly increase the share price of COIN's common stock. As a result, the Fund may suffer significant losses.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between the Underlying Security and the Fund's portfolio of derivatives, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the

reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund, in particular, the value of the options contracts in which it invests are substantially influenced by the value of COIN. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly moves with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in values options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain its synthetic covered put strategy through the use of options contracts, as the options contracts it holds are traded, exercised or expire, it will enter into new options contracts, a practice referred to as “rolling.” If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared (“cleared derivatives”). In a transaction involving cleared derivatives, the Fund’s counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house (“clearing members”) can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member’s individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund’s clearing member. In addition, although clearing members guarantee performance of their clients’ obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member’s bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member’s customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund’s behalf, which heightens the risks associated with a clearing member’s default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund’s behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund’s behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of put option contracts, which limits the degree to which the Fund will benefit from decreases in value experienced by COIN over the Put Period. This means that if COIN experiences a decrease in value below the strike price of the sold put options during a Put Period, the Fund will likely not experience that increase to the same extent and any Fund gains may significantly differ from the level of COIN losses over the Put Period. Additionally, because the Fund is limited in the degree to which it will participate in decreases in value experienced by COIN over each Put Period, but has significant negative exposure to any increases in value experienced by COIN over the Put Period, the NAV of the Fund may decrease over any given time period. The Fund’s NAV is dependent on the value of each options portfolio, which is based principally upon the inverse of the performance of COIN. The Fund’s ability to benefit from COIN losses will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold put option contracts and will vary from Put Period to Put Period. The value of the options contracts is affected by changes in the value and dividend rates of COIN, changes in interest rates, changes in the actual or perceived volatility of COIN and the remaining time to the options’ expiration, as well as trading conditions in the options market. As the price of COIN changes and time moves towards the expiration of each Put Period, the value of the options contracts, and therefore the Fund’s NAV, will change. However, it is not expected for the Fund’s NAV to directly inversely correlate on a day-to-day basis with the returns of COIN. The amount of time remaining until the options contract’s expiration date affects the impact that the value of the options contracts have on the Fund’s NAV, which may not be in full effect until the expiration date of the Fund’s options contracts. Therefore, while changes in the price of the COIN will result in changes to the Fund’s NAV, the Fund generally anticipates that the rate of change in the Fund’s NAV will be different than the inverse of the changes experienced by COIN.

Purchased OTM Call Options Risk. The Fund’s strategy is subject to potential losses if the Underlying Security shares increase in value, which may not be offset by the purchase of out-of-the-money (OTM) call options. The Fund purchases OTM calls to seek to manage (cap) the Fund’s potential losses from the Fund’s short exposure to the Underlying Security if it appreciates significantly in value. However, the OTM call options will cap the Fund’s losses only to the extent that the share price of the Underlying Security increases to a price that is at or above the strike price of the purchased OTM call options. Any increase in the share price of the Underlying Security to a price that is below the strike price of the purchased OTM call options will result in a corresponding loss for the Fund. For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund’s losses will be capped at approximately 70%. Notwithstanding the

foregoing, if the OTM call options have a strike price that is approximately 100% above the then-current share price of the Underlying Security at the time of the call option purchase, and the share price of the Underlying Security increases by at least 100% during the term of the purchased OTM call options, the Fund will lose all its value. Lastly, the Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund's value and/or any income otherwise generated by the Fund's investment strategy.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, the monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Put Writing Strategy Risk. The path dependency (*i.e.*, the continued use) of the Fund's put writing (selling) strategy will impact the extent that the Fund participates in the price decreases of COIN and, in turn, the Fund's returns, both during the term of the sold put options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money put options having a one-month term, the Fund's participation in the negative price returns of COIN will be capped at 7% in any given month. However, over a longer period (*e.g.*, 5 months), the Fund should not be expected to participate fully in the first 35% (*i.e.*, 5 months x 7%) of any negative price returns of COIN, or the Fund may even lose money, even if the COIN share price has decreased by at least that much over such period, if during any month over that period COIN's share price decreased by less than 7%. This example illustrates that both the Fund's participation in the negative price returns of COIN and its returns will depend not only on the price of COIN but also on the path that COIN takes over time.

Covered Put Spread Strategy Risk. The path dependency of the Fund's Covered Put Spread Strategy will impact the extent to which the Fund participates in the price decreases of the Underlying Security and, in turn, the Fund's returns, both during the term of the put spreads and over longer time periods. If, for example, each month the Fund were to sell a put spread where the written put option is 7% out-of-the-money and the purchased put option is 15% out-of-the-money, the Fund's participation in the negative price returns of the Underlying Security will be limited beyond the strike price of the purchased put option. However, over a longer period (*e.g.*, 5 months), the Fund should not be expected to participate fully in the first 35% (*i.e.*, 5 months x 7%) of any negative price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security's share price has decreased by at least that much over such period, if during any month over that period the Underlying Security's share price decreased by less than 7%. This example illustrates that both the Fund's participation in the negative price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time. Additionally, because the strategy involves purchasing a put option to offset the short put position, the net premium collected is reduced compared to a standalone put-writing strategy, potentially limiting the income generated and further constraining the Fund's returns in certain market conditions.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (*e.g.*, derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. This risk may be greater for the Fund as it seeks to have exposure to a single reference security as opposed to a more diverse portfolio like a traditional pooled investment. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at a market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that reference a single security, such as COIN's common stock being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. These costs, in turn, could decrease the value of the Fund or of its distributions, if any. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from realizing gains or achieving a high correlation with the inverse of COIN. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depositary accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

Newer Fund Risk. The Fund is a recently organized management investment company with limited operating history. As a result, prospective investors have a limited track record on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund’s overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund’s ability to meet its investment objective. Although the Fund and Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (COIN), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund’s taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund’s investments in options were to exceed 25% of the Fund’s total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund’s performance history from year to year and showing how the Fund’s average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund’s website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Michael Venuto, Chief Investment Officer for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only Authorized Participants (Aps) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

Information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

SUMMARY INFORMATION

YieldMax™ Short AAPL Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income. The Fund's secondary investment objective is to seek inverse (opposite) exposure to the share price of the common stock of Apple Inc. ("AAPL" or "Underlying Security"), subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	<u>0.99%</u>

⁽¹⁾ The Fund's adviser will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), and litigation expenses, and other non-routine or extraordinary expenses.

⁽²⁾ Based on estimated amounts for the current fiscal year.

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem or hold all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$101	\$315

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund has not commenced operations as of the prior fiscal year end, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect *inverse* exposure to the share price (*i.e.*, the price returns) of the common stock of Apple Inc. The Fund's potential for gains from **decreases** in the share price of AAPL's stock is limited. If the share price of the Underlying Security significantly decreases, the Fund will not fully benefit from the inverse of those decreases. The Fund will employ its investment strategy as it relates to the Underlying Security regardless of whether there are periods of strong market, economic, or other conditions and will not take temporary defensive positions during such periods.

As further described below, the Fund uses a either synthetic covered put strategy or synthetic covered put spread strategy to provide income and indirect *inverse* exposure to the share price returns of the Underlying Security, subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. That is, the Fund not only seeks to generate income from its options investments but also aims to derive additional gains when the share price of the Underlying Security **decreases**. The Fund's options contracts provide:

- indirect inverse exposure to the share price returns of the Underlying Security,
- current income from the option premiums, and
- a limit on the Fund's participation in gains, if any, arising from **decreases** in the share price of the Underlying Security.

For more information, see sections "The Fund's Use of Option Contracts," "Synthetic Covered Put Strategy" and "Synthetic Covered Put Spread Strategy" below.

The Fund's investment adviser is Tidal Investments LLC ("Tidal" or the "Adviser").

Why invest in the Fund?

- The Fund seeks to benefit when the share price of the Underlying Security decreases. The Fund's potential corresponding benefit from decreases in the share price of the Underlying Security is limited.
- The Fund seeks to generate monthly income, which is not dependent on the price depreciation of the Underlying Security.
- The Fund seeks to manage potential losses (i.e., cap losses if the share price of the Underlying Security experiences significant gains) by purchasing out-of-the-money call options (further described below).

Although the Fund may not fully benefit from decreases in the Underlying Security's share price, the Fund's portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security. Further, an Investment in the Fund differs from "short selling" or "shorting" the Underlying Security.

- The Fund's strategy will limit its potential gains if the Underlying Security shares decrease in value.
- The Fund's strategy is subject to potential losses if the Underlying Security shares increase in value, which may not be offset by income received by the Fund or by the purchase of out-of-the-money call options (further described below).
- The Fund does not invest directly in the Underlying Security.
- The Fund does not directly short the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund's Use of Option Contracts

As part of the Fund's synthetic covered put strategy and synthetic covered put spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® ("FLEX") call and put option contracts that are based on the share price of the Underlying Security. The Fund may use European FLEX options as well as options that are exercisable at any time (i.e. American style options contracts).

See the "Additional Information About the Fund" section for an overview of put and call option terminology.

Synthetic Covered Put Strategy Overview

In seeking to achieve its investment objective, the Fund may implement a "synthetic covered put" strategy using the standardized exchange-traded and FLEX options. The Fund uses a synthetic put strategy rather than a traditional one, utilizing Treasuries as collateral to potentially achieve higher returns than those of the Underlying Security.

- A *traditional* covered put strategy is an investment strategy where an investor (the Fund) sells a put option on an Underlying Security it is short.
- A *synthetic* covered put strategy is similar to a traditional covered put strategy in that the investor sells a put option that is based on the value of the Underlying Security. However, in a synthetic covered put strategy, the investor (the Fund) does not actually short the Underlying Security, but rather seeks to synthetically replicate a short position in the Underlying Security (i.e., it seeks inverse exposure to the share price movements of the Underlying Security) through the use of various investment instruments.

The Fund's synthetic covered put strategy consists of the following four elements, each of which is described in greater detail below:

- Synthetic short exposure to the Underlying Security, which allows the Fund to seek to participate, on an inverse basis, in changes, up or down, to the price of the Underlying Security's shares.
- Covered put strategies, which allows the Fund to generate income.

- U.S. Treasuries, which are used for collateral for the options, and which also generate income.
- Out-of-the money (“OTM”) call options, which are purchased to seek to manage (cap) the Fund’s potential losses from the Fund’s short exposure to the Underlying Security if it appreciates significantly in value.

However, this loss capping works only if the Underlying Security’s share price rises to or above the strike price of the OTM call options that were purchased. If the share price increases but stays below the strike price of these options, the Fund will incur losses proportionate to this price increase.

Synthetic Covered Put Strategy

1. Synthetic Short Exposure

To achieve a synthetic short exposure to the Underlying Security, the Fund will write (sell) the Underlying Security call options and, simultaneously, go long (buy) the Underlying Security put options to try to replicate inverse exposure to the share price movements of the Underlying Security. The put options purchased by the Fund and the call options sold by the Fund will generally have three-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The Fund uses the proceeds from selling call options to help pay for the purchased put options. The combination of the long put options and sold call options provides the Fund with investment exposure equal to approximately -100% of the Underlying Security’s share price changes for the duration of the applicable options exposure (i.e., the synthetic short position is expected to gain value when the share price of the Underlying Security decreases and to lose value when the share price of the Underlying Security increases).

2. Covered Put Strategies

Covered Put Writing Strategy

As part of its strategy, the Fund will write (sell) put option contracts on the Underlying Security to generate income. The put options written (sold) by the Fund will generally have 1- month or less expiration dates (the “Put Period”) and a strike price that is approximately 0%-15% below the then-current Underlying Security’s share price at the time of such sales.

It is important to note that the sale of the Underlying Security put option contracts will limit the Fund’s participation in decreases in the Underlying Security’s share price. If the share price of the Underlying Security decreases, the above-referenced synthetic short exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security’s share price decreases beyond the strike price of one or more of the sold (short) put option contracts, the Fund will lose money on those short put positions, and the losses will, in turn, limit the gains of the Fund’s synthetic short exposure. As a result, the Fund’s overall strategy (i.e., the combination of the synthetic short exposure to the Underlying Security and the sold (short) Underlying Security put positions) will limit the Fund’s participation in decreases in the Underlying Security’s share price beyond a certain point.

Covered Put Spread Strategy

The Adviser will employ the Covered Put Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Put Strategy. The Fund may write (sell) credit put spreads (described below) rather than stand-alone put option contracts to seek greater participation in the potential decline of its Underlying Security’s share price, while still generating net premium income. The Adviser will primarily employ this covered put spread strategy when it believes that the share price of its Underlying Security is likely to decline significantly in the short term (e.g., following a substantial market rally or overall negative market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit put spreads may prove more advantageous to the Fund’s total return than the covered put strategy.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund’s synthetic covered put strategy.

4. OTM Call Purchasing

The Fund purchases out-of-the-money (OTM) calls to seek to manage (cap) the Fund’s potential losses from the Fund’s short exposure to the Underlying Security if it appreciates significantly in value.

OTM call options are a type of options contract where the strike price is set higher than the current market price of the underlying asset, referred to here as the Underlying Security. When the Fund buys these OTM call options, it is essentially

setting a fixed price level. This level acts as a cap on the Fund's potential losses that might arise from its indirect inverse exposure to the share price of the Underlying Security. **However, this loss capping works only if the Underlying Security's share price rises to or above the strike price of the OTM call options that were purchased. If the share price increases but stays below the strike price of these options, the Fund will incur losses proportionate to this price increase.**

For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund's losses will be capped at approximately 70%.

The Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund's value and/or any income otherwise generated by the Fund's investment strategy.

The Fund intends to maintain its synthetic covered put strategy through the use of options contracts. As the options contracts it holds are traded, exercised or expire, it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) put option contracts on the Underlying Security, as described above. The income, in the form of option premiums received from such option sales, will be primarily influenced by the volatility of the Underlying Security shares, although other factors, including interest rates, will also impact the level of income.
- Investing in short-term U.S. Treasury securities. The income generated by such securities will be influenced by interest rates at the time of investment.
- In addition, the Fund's use of the covered put spread strategy may occasionally allow it to capture a substantial portion of any significant decrease in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the put options, and the Fund's distributions may include some of those profits.

The Fund's income from writing (selling) put option contracts on the Underlying Security will be partially offset (reduced) due to the premiums paid for purchasing OTM call options, which are purchased to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value.

Fund Portfolio

YieldMax™ Short AAPL Option Income Strategy ETF – Principal Holdings			
Portfolio Holdings (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity	Primary Purpose of Holding
Purchased put option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide exposure to negative price returns of the Underlying Security.</p> <p>If the share price of the Underlying Security decreases, these options will generate corresponding increases to the Fund.</p>	3-month to 6-month expiration dates	Combined with the sold call options, creates a synthetic short position on the Underlying Security.
Sold call option contracts	<p>"at-the-money" (<i>i.e.</i>, the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased put options described above.</p>	3-month to 6-month expiration dates	Combined with the purchased put options, creates a synthetic short position on the Underlying Security.

	However, the sold call option contracts provide exposure to the full extent of any share price increases experienced by the Underlying Security.		
Sold (short) put option contracts (<i>Covered Put Writing Strategy</i>)	The strike price is approximately 0%-15% below the then-current share price of the Underlying Security at the time of sale. They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced.	1-month or less expiration dates	Generate income for the Fund in the form of premiums, in return for capping the returns of the Fund's synthetic short position.
Sold (short) put option contracts (<i>Covered Put Spread Strategy</i>)	The strike price is approximately 0%-15% below than the then-current share price of the Fund's Underlying Security at the time of sale. Sold put option contracts provide inverse exposure to the full extent of any declines in the value experienced by the Fund's Underlying Security, minus the premium received.	1-month or less expiration dates	Combined with the purchased put option contract below, generates income for the Fund in the form of net premiums, in return for limiting the returns of the Fund's synthetic short position.
Purchased put option contracts (<i>Covered Put Spread Strategy</i>)	"out-of-the-money" (i.e., the strike price is below the strike price of the corresponding Covered Put Spread Strategy sold put). Bought put option contracts provide exposure to the full extent of any declines in the value experienced by the Fund's Underlying Security below the option's strike price.	1-month or less expiration dates	Combined with the Sold (short) put option contracts above, generates income for the Fund in the form of net premiums, in return for limiting the returns of the Fund's synthetic short position.
U.S Treasury Securities and Cash	Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government. These instruments are used as collateral for the Fund's derivative investments. They will also generate income.	6-month to 2-year maturities	Collateral for the options positions and some additional income.
Purchased call option contracts (<i>OTM Call Purchasing</i>)	"out-of-the-money" (i.e., the strike price is set above the then-current share price of the Underlying Security at the time of purchase). They limit the Fund's potential losses if the share price of the Underlying Security experiences significant gains. They represent a cost (debit) that will partially offset (reduce) the net premium received from the sale of the put options.	1-month to 6-month expiration dates	Limit the maximum loss of the Fund's synthetic short position.

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund's net assets and the market value of the options package is expected to be between 0% and 50% of the Fund's net assets. The combination of these investment instruments provides indirect inverse investment exposure to the share price of the Underlying Security equal to at least 100% of the Fund's total assets.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide inverse exposure to the performance of AAPL.

The Fund is classified as "non-diversified" under the 1940 Act.

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Apple Inc.

Apple Inc. designs, manufactures, and markets smartphones, personal computers, tablets, wearable and accessories, and sells a variety of related services. Apple Inc. is listed on the Nasdaq Global Select Market ("Nasdaq"). The aggregate market value of the voting and

non-voting stock held by non-affiliates of Apple Inc., as of the most recent available data at time of drafting this prospectus (March 29, 2024), the last business day of Apple Inc.'s most recently completed second fiscal quarter, was approximately \$2.6 trillion.

Apple Inc. is registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Information provided to or filed with the SEC by Apple Inc. pursuant to the Exchange Act can be located by reference to the SEC file number 001-36743 through the SEC's website at www.sec.gov. In addition, information regarding Apple Inc. may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

This document relates only to the securities offered hereby and does not relate to AAPL or other securities of Apple Inc. The Fund has derived all disclosures contained in this document regarding Apple Inc. from the publicly available documents. In connection with the offering of the securities, none of the Fund, the Trust, the Adviser or their respective affiliates has participated in the preparation of such documents or made any due diligence inquiry with respect to Apple Inc. None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding Apple Inc. is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of Apple Inc. (and therefore the price of Apple Inc. at the time we price the securities) have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning Apple Inc. could affect the value received with respect to the securities and therefore the value of the securities.

None of the Fund, the Trust, the Adviser or their respective affiliates makes any representation to you as to the performance of AAPL.

THE FUND, TRUST AND ADVISER ARE NOT AFFILIATED WITH APPLE INC.

Due to the Fund's investment strategy, the Fund's economic exposure is inversely related to the industry assigned to AAPL. As of January 21, 2025, AAPL is assigned to the technology hardware, storage and peripherals industry.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

AAPL Price Appreciation Risk. As part of the Fund's synthetic covered put strategy, the Fund purchases and sells call and put option contracts that are based on the share price of AAPL common stock. This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund's indirect inverse exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security's share price increases. If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses. The Fund may also be subject to the following risks:

Indirect Investment in AAPL Risk. Apple Inc. is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of Apple Inc. but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be adversely impacted by increases in the share price of the Underlying Security.

Underlying Security Trading Risk. The trading price of the Underlying Security may become less volatile over time, which could have an adverse impact on the Fund's performance. The Fund's synthetic covered put strategy is designed to benefit from significant price fluctuations in the Underlying Security. However, if the Underlying Security experiences reduced volatility, it may lead to a decrease in the Fund's potential returns.

Historically, the Underlying Security's shares have exhibited modest price swings. However, there is a possibility that market conditions, investor sentiment, or other factors may contribute to decreased volatility in the future. Such reduced volatility could limit the opportunities for the Fund to profit from its credit spread positions, as the strategy relies on price differentials between options with varying strike prices.

It's important to note that the Fund's performance is closely tied to the dynamics of the Underlying Security's share price. As such, any significant reduction in the volatility of the Underlying Security's share price may present challenges for the Fund's synthetic covered put strategy and may affect its ability to achieve its investment objectives. Investors should consider this potential risk when evaluating their investment in the Fund.

AAPL Good Performance Risk. Apple Inc. may meet or exceed its publicly announced expectations or guidelines regarding its business, which could potentially lead to a rise in the share price of the Underlying Security. Apple Inc. regularly provides guidance concerning its anticipated financial and business performance, including sales and production projections, future revenues, gross margins, profitability, and cash flows. However, forecasting future events and identifying key factors affecting business conditions inherently involves uncertainty. Apple Inc.'s guidance may ultimately prove accurate or may prove underestimated, as it relies on assumptions such as global and local economic conditions, anticipated production and sales volumes, average sales prices, supplier and commodity costs, and planned cost reductions. If Apple Inc.'s guidance is accurate or varies positively from actual results, AAPL's share price could increase significantly and, as a result, the Fund may suffer significant losses.

In addition, AAPL currently has strong financial health, innovative prowess, and a strong global brand presence. AAPL has substantial cash reserves and may continue to provide shareholder-friendly policies, such as dividends and share buybacks, which increase the value of the Underlying Security, all of which could significantly increase the share price of AAPL's common stock. As a result, the Fund may suffer significant losses.

Inverse Apple Product Risk: Apple Inc.'s products may possess a strong potential for success, through an integration of innovative technology, design aesthetics, and user-friendly interfaces. AAPL has a loyal customer base, that is often eager to adopt the latest iterations of its product offerings. The brand's ecosystem, characterized by interconnectivity between devices and services, enhances user retention and may promote a higher lifetime value per customer. AAPL's offers diversified product lines, including wearables and services, has broadened its revenue streams. These expansions, coupled with AAPL's push into subscription services, may bolster its capacity to generate stable, recurring revenue, all of which could significantly increase the share price of AAPL's common stock. As a result, the Fund may suffer significant losses.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in securities. When the Fund uses derivatives, there may be an imperfect correlation between Underlying Security and the Fund's portfolio of derivatives, which may prevent the Fund from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For the Fund, in particular, the value of the options contracts in which it invests are substantially influenced by the value of AAPL. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly moves with the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in values options contracts and the underlying instrument, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. Additionally, as the Fund intends to continuously maintain its synthetic covered put strategy through the use of options contracts, as the options contracts it holds are traded, exercised or expire, it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, the Fund may experience losses.

Counterparty Risk. The Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin

payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by the Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of the Fund might not be fully protected in the event of the clearing member's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. The Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Fund as it seeks to hold options contracts on a single security, and not a broader range of options contracts, which may limit the number of clearing members that are willing to transact on the Fund's behalf. If a clearing member defaults the Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing member. If the Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Price Participation Risk. The Fund employs an investment strategy that includes the sale of put option contracts, which limits the degree to which the Fund will benefit from decreases in value experienced by AAPL over the Put Period. This means that if AAPL experiences a decrease in value below the strike price of the sold put options during a Put Period, the Fund will likely not experience that increase to the same extent and any Fund gains may significantly differ from the level of AAPL losses over the Put Period. Additionally, because the Fund is limited in the degree to which it will participate in decreases in value experienced by AAPL over each Put Period, but has significant negative exposure to any increases in value experienced by AAPL over the Put Period, the NAV of the Fund may decrease over any given time period. The Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the inverse of the performance of AAPL. The Fund's ability to benefit from AAPL losses will depend on prevailing market conditions, especially market volatility, at the time the Fund enters into the sold put option contracts and will vary from Put Period to Put Period. The value of the options contracts is affected by changes in the value and dividend rates of AAPL, changes in interest rates, changes in the actual or perceived volatility of AAPL and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of AAPL changes and time moves towards the expiration of each Put Period, the value of the options contracts, and therefore the Fund's NAV, will change. However, it is not expected for the Fund's NAV to directly inversely correlate on a day-to-day basis with the returns of AAPL. The amount of time remaining until the options contract's expiration date affects the impact that the value of the options contracts have on the Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the AAPL will result in changes to the Fund's NAV, the Fund generally anticipates that the rate of change in the Fund's NAV will be different than the inverse of the changes experienced by AAPL.

Purchased OTM Call Options Risk. The Fund's strategy is subject to potential losses if the Underlying Security shares increase in value, which may not be offset by the purchase of out-of-the-money (OTM) call options. The Fund purchases OTM calls to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the Underlying Security if it appreciates significantly in value. However, the OTM call options will cap the Fund's losses only to the extent that the share price of the Underlying Security increases to a price that is at or above the strike price of the purchased OTM call options. Any increase in the share price of the Underlying Security to a price that is below the strike price of the purchased OTM call options will result in a corresponding loss for the Fund. For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund's losses will be capped at approximately 70%. Notwithstanding the foregoing, if the OTM call options have a strike price that is approximately 100% above the then-current share price of the Underlying Security at the time of the call option purchase, and the share price of the Underlying Security increases by at least 100% during the term of the purchased OTM call options, the Fund will lose all its value. Lastly, the Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund's value and/or any income otherwise generated by the Fund's investment strategy.

Distribution Risk. As part of the Fund's investment objective, the Fund seeks to provide current monthly income. There is no assurance that the Fund will make a distribution in any given month. If the Fund does make distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, the monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

NAV Erosion Risk Due to Distributions. When the Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions by the Fund, if any, may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

Put Writing Strategy Risk. The path dependency (*i.e.*, the continued use) of the Fund's put writing (selling) strategy will impact the extent that the Fund participates in the price decreases of AAPL and, in turn, the Fund's returns, both during the term of the sold put options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money put options having a one-

month term, the Fund's participation in the negative price returns of AAPL will be capped at 7% in any given month. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of any negative price returns of AAPL, or the Fund may even lose money, even if the AAPL share price has decreased by at least that much over such period, if during any month over that period AAPL's share price decreased by less than 7%. This example illustrates that both the Fund's participation in the negative price returns of AAPL and its returns will depend not only on the price of AAPL but also on the path that AAPL takes over time.

Covered Put Spread Strategy Risk. The path dependency of the Fund's Covered Put Spread Strategy will impact the extent to which the Fund participates in the price decreases of the Underlying Security and, in turn, the Fund's returns, both during the term of the put spreads and over longer time periods. If, for example, each month the Fund were to sell a put spread where the written put option is 7% out-of-the-money and the purchased put option is 15% out-of-the-money, the Fund's participation in the negative price returns of the Underlying Security will be limited beyond the strike price of the purchased put option. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of any negative price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security's share price has decreased by at least that much over such period, if during any month over that period the Underlying Security's share price decreased by less than 7%. This example illustrates that both the Fund's participation in the negative price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time. Additionally, because the strategy involves purchasing a put option to offset the short put position, the net premium collected is reduced compared to a standalone put-writing strategy, potentially limiting the income generated and further constraining the Fund's returns in certain market conditions.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on the Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of the Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. This risk may be greater for the Fund as it seeks to have exposure to a single reference security as opposed to a more diverse portfolio like a traditional pooled investment. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at a market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market

conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange “circuit breaker” rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that reference a single security, such as AAPL’s common stock, being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the Fund’s holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund’s expenses. These costs, in turn, could decrease the value of the Fund or of its distributions, if any. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund’s assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Fund, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater for the Fund as it will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to sell an illiquid security at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent the Fund from realizing gains or achieving a high correlation with the inverse of AAPL. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund.

Market Events Risk. The Fund’s investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is “non-diversified,” it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund’s overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund’s volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund’s performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund’s ability to meet its investment objective. Although the Fund, Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Single Issuer Risk. Issuer-specific attributes may cause an investment in the Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses on an individual security (AAPL), may

be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If the Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, the Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If the Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If the Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.yieldmaxetfs.com.

Management

Investment Adviser: Tidal Investments LLC serves as investment adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Jay Pestrighelli, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Michael Venuto, Chief Investment Officer for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Christopher P. Mullen, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2025.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (Aps) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the "bid-ask spread."

When available, information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.yieldmaxetfs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless an investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT THE FUNDS

Investment Objective

The primary investment objective of the YieldMax™ Short TSLA Option Income Strategy ETF (the “Short TSLA Fund”) is to seek current income. The Short TSLA Fund’s secondary investment objective is to seek inverse (opposite) exposure to the share price of the common stock of Tesla, Inc. (“TSLA”), subject to a limit on potential investment gains.

The primary investment objective of the YieldMax™ Short Innovation Option Income Strategy ETF (the “Short Innovation Fund”) is to seek current income. The Short Innovation Fund’s secondary investment objective is to seek inverse (opposite) exposure to the share price of the ARK Innovation ETF (“ARKK”), subject to a limit on potential investment gains.

The primary investment objective of the YieldMax™ Short NVDA Option Income Strategy ETF (the “NVDA Inverse Fund”) is to seek current income. The Short NVDA Fund’s secondary investment objective is to seek inverse (opposite) exposure to the share price of the common stock of Nvidia Corporation (“NVDA”), subject to a limit on potential investment gains.

The primary investment objective of the YieldMax™ Short COIN Option Income Strategy ETF (the “COIN Inverse Fund”) is to seek current income. The Short COIN Fund’s secondary investment objective is to seek inverse (opposite) exposure to the share price of the common stock of Coinbase Global, Inc. (“COIN”), subject to a limit on potential investment gains.

The primary investment objective of the YieldMax™ Short AAPL Option Income Strategy ETF (the “Short AAPL Fund”, and with the Short TSLA Fund, Short Innovation Fund, Short NVDA Fund, and Short COIN Fund, each a “Fund” and collectively, the “Funds”) is to seek current income. The Short AAPL Fund’s secondary investment objective is to seek inverse (opposite) exposure to the share price of the common stock of Apple Inc. (“AAPL”, and with each of TSLA, Innovation, NVDA, and COIN each an “Underlying Issuer” and collectively, the “Underlying Issuers”, and the common stock of AAPL, of TSLA, of NVDA and of COIN, along with the shares of ARKK, each an “Underlying Security” and collectively, the “Underlying Securities”), subject to a limit on potential investment gains.

An investment objective is fundamental if it cannot be changed without the consent of the holders of a majority of the outstanding Shares. No Fund’s investment objective has been adopted as a fundamental investment policy and therefore each Fund’s investment objective may be changed without the consent of that Fund’s shareholders upon approval by the Board of Trustees (the “Board”) of Tidal Trust II (the “Trust”) and at least 60 days’ written notice to shareholders.

Principal Investment Strategies

Each Fund has an 80% policy that, under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to the underlying security referenced in the Fund’s investment objective.

For each Fund’s 80% test, the notional value of its options contracts will be used. “Notional value” refers to the “face” value of a Fund investment, rather than the amount of capital the Fund has actually committed. It represents the total value of the Fund’s position, rather than its equity in that position. Essentially, it reflects the full value of a leveraged position in the market, even if the Fund uses a fraction of that amount as collateral.

Each Fund’s 80% policy is non-fundamental and can be changed without shareholder approval. However, Fund shareholders would be given at least 60 days’ notice prior to any such change.

Overview of Options Terminology

Each Fund’s options contracts are based on the value of the corresponding Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the “strike price”).

- The seller of an option contract may be obligated to deliver shares (for a sold or “short” call option) or buy shares (for a sold or “short” put option) of the underlying asset at a specified price (the “strike price”).
- Options contracts must be exercised or traded to close within a specified time frame, or they expire.
- A *traditional* covered put strategy is an investment strategy where an investor (the Fund) sells a put option on an Underlying Security it is short.
- A *synthetic* covered put strategy is similar to a traditional covered put strategy in that the investor sells a put option that is based on the value of the Underlying Security. However, in a synthetic covered put strategy, the investor (the Fund) does not actually short the Underlying Security, but rather seeks to synthetically replicate a short position in the Underlying Security (i.e., it seeks inverse exposure to the share price movements of the Underlying Security) through the use of various investment instruments.
- European and American style options contracts differ primarily in terms of when the options can be exercised. European style options can only be exercised at expiration, while American options can be exercised at any time before expiration.

Synthetic Exposure to the Inverse of the Underlying Security’s Share Price Returns

- The Funds purchase put option contracts on their respective Underlying Security generally having three-month to six-month terms and strike prices equal to the then-current share price of the Underlying Security at the time of the purchases to provide the Funds indirect *inverse* exposure to the downside price returns of the Underlying Security. As a buyer of put option contracts, each Fund pays a premium to the seller of the options contracts to obtain the right to sell the Underlying Security at the strike price if the buyer (the Fund) exercises the option contract. The purchased put allows the Fund to participate in the inverse of the price returns of the Underlying Security beyond the strike price of the purchased put option contract at expiration (or earlier, if the Fund closes the option contract prior to expiration); and
- The Funds simultaneously sells call option contracts on their respective Underlying Security to help pay the premium of the purchased put option contracts on the Underlying Security described above. Each Fund sells call option contracts that also generally have three-month to six-month terms and strike prices equal to the then-current share price of the Underlying Security at the time of the sales to provide the Fund indirect *inverse* exposure to the upside price returns of the Underlying Security. As a seller of a call option contract, each Fund receives a premium from the buyer of the option contract in exchange for the Fund’s obligation, if exercised, to purchase the Underlying Security at the strike price if the buyer exercises the option contract.
- The combination of the purchased (long) put options and the sold call options described above provides each Fund with investment exposure equal to approximately -100% of its respective Underlying Security’s share price changes for the duration of the applicable options exposure. **As a result, this combination of options is expected to gain value when the share price of the Underlying Security decreases and to lose value when the share price of the Underlying Security increases.**

For illustrative purposes, consider a scenario where a synthetic covered put strategy is initiated while the value of the Underlying Security is \$100. This sets the strike price for both the at-the-money call and put options at \$100. Additionally, a short put option is struck 5% out-of-the-money (i.e., below the market value), with a strike price of \$95. If the value of the Underlying Security decreases to \$80, the Fund benefits from the price decline up to the \$95 strike price of the short put option. This scenario would result in a 5% return for the Fund from the decrease in Underlying Security’s value.

Generating Monthly Income

- Each Fund sells put option contracts that are based on the value of its respective Underlying Security to generate income via option premiums. On a monthly basis or more frequently, a Fund will sell put option contracts on the Underlying Security with expiration dates of approximately one month or less in the future at strike prices that are approximately equal to 0%-15% below the then-current share price of the Underlying Security. By doing so, a Fund gives up the potential to fully participate in decreases in the Underlying Security share price, if any, beyond the strike price of the sold put options in exchange for income received in the form of put option premium. If the share price of the Underlying Security is greater than the put option’s strike price at the expiration of the contract, the option contract will expire worthless and the Fund’s return on the sold put position will be the premium originally received for selling the option contract. If the share price of the Underlying Security is less than the strike price at the expiration of the option contract, the Fund will typically forgo all of the returns that exceed the strike price of the sold put option contract, and there will be a cost to “close out” the now in-the-money put options. The short put options are “closed out” (repurchased) prior to their expiration so that the Fund will not get assigned on the, now, in-the-money put options. At times the put options may be “rolled” instead of simply closed. This is to say, new put options are simultaneously sold to open a new short put position, while the previously sold puts are repurchased to close out the original short put position.

- The Funds purchase multiple series of U.S. Treasury securities to collateralize the options contracts they sell. The U.S. Treasury securities also provide monthly income.

Covered Put Strategy:

When employing the covered put strategy, each Fund's sale of put option contracts to generate income will limit the degree to which the Fund will inversely participate in decreases in the share price of the Underlying Security. **This means that if the Underlying Security experiences a decrease in the share price, the Fund will likely not experience a corresponding increase to the same extent (i.e., there is no participation beyond the level of the strike price of the sold put option contracts) and may result in the Fund significantly underperforming inverse of the Underlying Security.** The degree of inverse participation in the Underlying Security losses will depend on the strike price of the short put option contracts and prevailing market conditions, especially market volatility, at the time the Fund sells the put option contracts. The potential for capturing downside returns on the Underlying Security will also depend on whether a Fund fully "covers" its potential downside price return exposure to the Underlying Security by virtue of its sold put option contracts. If a Fund fully covers the downside price return exposure to the Underlying Security, the Fund's potential upside to the Underlying Security's price declines will be completely capped at the sold put options' strike price, meaning the Fund may forgo inverse benefits from all price declines experienced by the Underlying Security beyond the strike price. If a Fund partially covers its potential downside return exposure with the sold put option, the Fund will have muted returns beyond the strike price of the sold put option to the extent that the Underlying Security's share price declines beyond the strike price.

The sale of put option contracts will offset losses experienced by an Underlying Security only to the extent of premiums received from such sold put option contracts. The Funds expect to inversely participate in all the Underlying Security price return gains over the duration of the options contracts (e.g., if the Underlying Security increases in value by 5%, the Fund should be expected to decrease in value by approximately 5%, before Fund fees and expenses) beyond the income received from the sold put option contract premiums.

Covered Put Spread Strategy:

When employing the *opportunistic* credit put spread strategy, a Fund's sale of put option contracts, paired with the purchase of lower strike put option contracts, aims to generate income while still allowing for potential indirect inverse participation in decreases in the share price of its Underlying Security below the strike of the lower price put option which was bought. **However, this strategy may nonetheless still limit the degree to which the Fund fully participates (inversely) in such decreases as the Fund will not participate (directly or indirectly) in any appreciation between the strikes of the sold put option and bought put option.**

The sale of credit put spreads will offset gains experienced by an Underlying Security's share price only to the extent of premiums received from such sold put option contracts. Each Fund expects to participate (inversely) in all of its Underlying Security's gains beyond the income received from the sold put spreads contract premiums. For instance, if a Fund's Underlying Security increases in value by 5%, the Fund should be expected to decrease in value by approximately 5%, before Fund fees and expenses, beyond the income received from the sold put spreads contract premiums.

Examples:

The following table provides an overview of a Fund's anticipated performance versus various changes in the share price of its Underlying Security when the Covered Put Strategy is employed.

Price Movement of Underlying Security	Anticipated Fund Performance & Performance Relative to Underlying Security*
Significant decline in share price	Increase in Fund NAV – Significant underperformance vs the inverse performance of the Underlying Security
Moderate decline or flat performance	Increase in Fund NAV – Outperformance vs inverse the performance of the Underlying Security
Rise in share price	Decline or flat Fund NAV – Outperformance vs inverse the performance of the Underlying Security

The following table provides an overview of a Fund's anticipated performance versus various changes in the share price of its Underlying Security when the *Opportunistic* Credit Put Spread Strategy is employed.

Price Movement of Underlying Security	Anticipated Fund Performance & Performance Relative to Underlying Security*
Significant decline in share price	Increase in Fund NAV – Underperformance vs the inverse performance of the Underlying Security

Moderate decline or flat performance	Increase in Fund NAV – Outperformance vs inverse the performance of the Underlying Security
Rise in share price	Decline or flat Fund NAV – Outperformance vs inverse the performance of the Underlying Security

* A Fund's actual NAV performance and performance against the price of its Underlying Security may differ, primarily due to path dependency and strike selection as discussed above. Also, please see Price Participation Risk and Call Writing Strategy Risk.

Potential Downside Participation – Covered Put Strategy vs Covered Put Spread Strategy

To further illustrate how the Fund's covered put spread strategy results in greater downside participation, the following examples compare the outcomes of a hypothetical covered put and a covered put spread. These scenarios demonstrate how a Fund's use of its covered put spread strategy can lead to increased potential appreciation of the inverse of its Underlying Security's share price while still generating net premium income. Additionally, the examples highlight the estimated amount or limits on the greater participation in potential declines as compared to a put option contract strategy.

Examples:

Scenario 1 (Covered Put Strategy): Selling a Covered put on an Underlying Security

- Underlying Security Share Price: \$100
- Strike Price of Sold Covered Put: \$95
- Premium Received: \$2

Outcome if the share price of the Underlying Security declines to \$90:

1. Share Price Decline: The Fund benefits from the decline in the Underlying Security's price to \$95 but does not participate further below the \$95 strike price since the Fund sold a put struck at \$95.
 - Gain from Decline: \$5 (i.e., $100 - 95 = 5$)
2. Put Premium: Fund retains the initial \$2 premium.
3. Total Gain: \$7 (i.e., \$5 gain from price decline, plus \$2 premium)

Scenario 2 (Covered Put Spread Strategy): Selling a Covered Put Spread on an Underlying Security

- Underlying Security Share Price: \$100
- Strike Prices of Covered Put Spread: Sold put at \$100, Purchased Put at \$97.50
- Net Premium Received: \$2

Outcome if the share price of the Underlying Security declines to \$90:

1. Share Price Decline: The Fund benefits from the decline in the Underlying Security's price from \$97.5 down to the \$90.00 strike price of the purchased put. Note that the Fund did not benefit from the initial decline between \$100 and \$97.5.
 - Gain from Decline: \$7.50 (i.e., $97.50 - 90.00 = 7.50$)
2. Net Premium: The Fund retains the net premium of \$2.
3. Total Gain: \$9.50 (i.e., \$7.50 gain from price decline, plus \$2 net premium)

Comparison:

- **Covered Put:** Gain is capped at \$7, as participation in the Underlying Security's decline is capped at the sold put's \$95 strike price.

- **Covered Put Spread:** Gain is \$9.50, as the put spread provides additional downside participation below the purchased put's \$97.50 strike price. Furthermore, the Fund's gain potential is not capped (i.e., if the value of the Underlying Security's share price declines further, the Fund's gain would also increase further).

Conclusion:

In this scenario where the Underlying Security declines to \$90, the opportunistic credit put spread strategy yields a higher total gain of \$9.50 compared to the \$7 gain from selling a simple covered put. The opportunistic credit put spread allows the Fund to participate in potential downside beyond the strike price of the purchased put, resulting in the potential for additional gains to the Fund.

Further, if the Underlying Security's share price declines further beyond the strike price of the purchased put, the opportunistic credit put spread strategy allows for continued participation in the downside through the increasing value of the purchased put. This results in the potential for additional gains for the Fund. In contrast, the covered put strategy's gain potential is capped at the strike price of the sold put.

There is no guarantee that each Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Each Fund's NAV is dependent on the aggregate values of the Fund's options contracts, where such values are principally affected by the share price of the Underlying Security, the volatility of the Underlying Security, and the time remaining until the expiration date of the various option contracts held by the Fund. Each Fund's synthetic short exposure strategy will effectively allow that portion of the Fund's assets to move in sync (but inversely) with the daily changes in the Underlying Security's share price.

However, each Fund's benefit from the potential downside in the Underlying Security's price returns is limited by virtue of its sold put option contract positions. The degree to which a shareholder may benefit from the downside exposure to the Underlying Security obtained by a Fund will depend on the time at which the investor purchases Shares of the Fund and the price movements of the Underlying Security. At any given time, there may be limited upside potential for a Fund. If the price of the Underlying Security is near or has fallen below the strike price of a Fund's sold put option contracts when an investor purchases Shares, such investor may have little to no upside potential remaining until the current short puts are replaced by a new set of short puts, as well as remain vulnerable to significant downside risk (if the Underlying Security's share price increases in value), including the loss of their entire investment.

Each Fund will invest significantly in short-term (6-month to 2-year) U.S. Treasury securities as collateral in connection with the Fund's synthetic covered put strategy. U.S. Treasury securities are government debt instruments issued by the United States Department of the Treasury and are backed by the full faith and credit of the United States government. The Funds' investments in U.S. Treasury securities contribute to the monthly income sought by the Funds.

Exchange Traded Options Portfolio

FLEX options are customized options contracts that trade on an exchange but provide investors with the ability to customize key contract terms like strike price, style and expiration date while achieving price discovery in competitive, transparent auctions markets and avoiding the counterparty exposure of "over-the-counter" ("OTC") options positions. Like traditional exchange-traded options, FLEX Options are guaranteed for settlement by the OCC, a market clearinghouse that guarantees performance by counterparties to certain derivatives contracts.

The FLEX options in which the Funds may invest are all European style options (options that are exercisable only on the expiration date). The FLEX options are listed on the Chicago Board Options Exchange.

The Funds will use the market value of its derivatives holdings for the purpose of determining compliance with the 1940 Act and the rules promulgated thereunder. Since the options held by the Funds are exchange-traded, these will be valued on a mark-to-market basis. In the event market prices are not available, the Funds will use fair value pricing pursuant to the fair value procedures adopted by the Board.

Manager of Managers Structure

Although the Funds are not currently sub-advised, the Funds and the Adviser have received exemptive relief from the SEC permitting the Adviser (subject to certain conditions and the approval of the Board) to change or select new unaffiliated sub-advisers without obtaining shareholder approval. The relief also permits the Adviser to materially amend the terms of agreements with an unaffiliated sub-adviser (including an increase in the fee paid by the Adviser to the unaffiliated sub-adviser (and not paid by the Fund)) or to continue the employment of an unaffiliated sub-adviser after an event that would otherwise cause the automatic termination of services with Board approval, but without shareholder approval. Shareholders will be notified of any unaffiliated sub-adviser changes. The Adviser has the ultimate responsibility, subject to oversight by the Board, to oversee a sub-adviser and recommend their hiring, termination and replacement.

Investments by Registered Investment Companies

Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies. However, registered investment companies are permitted to invest in other investment companies beyond the limits set forth in Section 12(d)(1) in recently adopted rules under the 1940 Act, subject to certain conditions. Each Fund may rely on Rule 12d1-4 of the 1940 Act, which provides an exemption from Section 12(d)(1) that allows the Fund to invest beyond the limits set forth in Section 12(d)(1) if the Fund satisfies certain conditions specified in Rule 12d1-4, including, among other conditions, that the Fund and its advisory group will not control (individually or in the aggregate) an acquired fund (e.g., hold more than 25% of the outstanding voting securities of an acquired fund that is a registered open-end management investment company).

Principal Risks of Investing in the Funds

There can be no assurance that the Funds will achieve their respective investment objective. The following information is in addition to, and should be read along with, the description of each Fund's principal investment risks in the section titled "Fund Summary— Principal Investment Risks" above. Following the Fund-specific Underlying Security risks, the remaining principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Funds, regardless of the order in which it appears.

TSLA Price Appreciation Risk. The YieldMax™ Short TSLA Option Income Strategy ETF purchases and sells call and put option contracts that are based on the share price of TSLA common stock. This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund's indirect inverse exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security's share price **increases. If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses.** The Fund may also be subject to the following risks:

Indirect Investment in TSLA Risk. Tesla, Inc. is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of Tesla, Inc. but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be adversely impacted by increases in the share price of the Underlying Security.

Underlying Security Trading Risk. The trading price of the Underlying Security may become less volatile over time, which could have an adverse impact on the Fund's performance. The Fund's synthetic covered put strategy is designed to benefit from significant price fluctuations in the Underlying Security. However, if the Underlying Security experiences reduced volatility, it may lead to a decrease in the Fund's potential returns.

Historically, the Underlying Security's shares have exhibited substantial price swings, but there is a possibility that market conditions, investor sentiment, or other factors may contribute to decreased volatility in the future. Such reduced volatility could limit the opportunities for the Fund to profit from its credit spread positions, as the strategy relies on price differentials between options with varying strike prices.

It's important to note that the Fund's performance is closely tied to the dynamics of the Underlying Security's share price. As such, any significant reduction in the volatility of the Underlying Security's share price may present challenges for the Fund's synthetic covered put strategy and may affect its ability to achieve its investment objectives. Investors should consider this potential risk when evaluating their investment in the Fund.

TSLA Good Performance Risk. Tesla, Inc. may meet or exceed its publicly announced expectations or guidelines regarding its business, which could potentially lead to a rise in the price of the Underlying Security. Tesla, Inc. regularly provides guidance concerning its anticipated financial and business performance, including sales and production projections, future revenues, gross margins, profitability, and cash flows. However, forecasting future events and identifying key factors affecting business conditions inherently involves uncertainty. Tesla, Inc.'s guidance may ultimately prove accurate or may prove underestimated, as it relies on assumptions such as global and local economic conditions, anticipated production and sales volumes, average sales prices, supplier and commodity costs, and planned cost reductions. If Tesla, Inc.'s guidance is accurate or varies positively from actual results, TSLA's share price could increase significantly and, as a result, the Fund may suffer significant losses.

Inverse Electric Vehicle Consumer Adoption Risk. Tesla may experience substantial growth if consumer demand for electric vehicles continues to expand. Deviations from expected market developments, be it accelerated growth, shifts in demand, or heightened electric vehicle adoption, could present advantageous conditions for Tesla, Inc.'s business. These conditions might bolster its market position, enhance overall prospects, strengthen financial stability, and improve operational performance. Despite having fewer resources and production capabilities compared to established competitors with traditional internal combustion engine offerings, Tesla, Inc. appears poised to benefit from the expanding electric vehicle sector. As electric vehicles currently constitute a smaller fraction of the overall vehicle market, Tesla, Inc. appears well-positioned to capitalize

on factors such as shifting consumer preferences, increased competition from alternative fuel vehicles, and supportive government policies and incentives. Furthermore, Tesla, Inc. competes in a dynamic demographic landscape where innovation and differentiation play key roles. In a sector marked by cyclical sales patterns, Tesla, Inc. has the potential to navigate these trends adeptly, seizing opportunities during market upswings and maintaining resilience during downturns, ultimately contributing to its long-term success.

Inverse Auto Manufacturers Industry Risk. The automotive industry may present continued opportunities for Tesla, Inc.'s business operations. This sector is known for its cyclical nature, but Tesla, Inc. may be able to leverage its innovative approaches to minimize the impact of periodic operating losses. Labor disputes, fluctuations in component prices, and supplier disruptions, often encountered by traditional automakers, may be less pronounced for Tesla, Inc. due to its unique production and supply chain strategies. Tesla's investments in cutting-edge automotive technologies, such as autonomous vehicles, may indeed require substantial capital, but they hold the potential for long-term profitability. Additionally, Tesla, Inc.'s nimble approach allows it to respond swiftly to government policies and regulations, potentially aligning its strategies with favorable incentives. While many established automotive manufacturers are diversified, Tesla, Inc.'s focused product line and growing customer base may enable it to effectively navigate industry dynamics and capitalize on factors that can drive its sustained success.

ARKK Price Appreciation Risk. The YieldMax™ Short Innovation Option Income Strategy ETF purchases and sells call and put option contracts that are based on the share price of ARKK. This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund's indirect inverse exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security's share price **increases. If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses.** The Fund may also be subject to the following risks:

Indirect Investment in ARKK Risk. The ARK Innovation ETF is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of ARKK but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be subject to increases in the price performance of the Underlying Security.

Underlying Security Trading Risk. The trading price of the Underlying Security may become less volatile over time, which could have an adverse impact on the Fund's performance. The Fund's synthetic covered put strategy is designed to benefit from significant price fluctuations in the Underlying Security. However, if the Underlying Security experiences reduced volatility, it may lead to a decrease in the Fund's potential returns.

Historically, the Underlying Security has exhibited substantial price swings, but there is a possibility that market conditions, investor sentiment, or other factors may contribute to decreased volatility in the future. Such reduced volatility could limit the opportunities for the Fund to profit from its credit spread positions, as the strategy relies on price differentials between options with varying strike prices.

It's important to note that the Fund's performance is closely tied to the dynamics of the Underlying Security's share price. As such, any significant reduction in the volatility of the Underlying Security may present challenges for the Fund's synthetic covered put strategy and may affect its ability to achieve its investment objectives. Investors should consider this potential risk when evaluating their investment in the Fund.

ARKK Good Performance Risk. ARKK may meet or exceed its investment objectives, and the value of the Underlying Security may increase significantly (which would be a detriment to the Fund). The value of ARKK's investments may rise due to positive market and economic conditions, favorable perceptions regarding the industries in which the issuers of securities ARKK holds participate, or factors relating to specific companies in which ARKK invests. These can include share price movements, purchases or sales of securities by ARKK, government policies, litigation, and changes in interest rates, inflation, the financial condition of the securities' issuer or perceptions of the issuer, or economic conditions in general or specific to the issuer. Equity securities may also be particularly aligned with general movements in the stock market, and a rise in the broader market may positively affect the value of ARKK's equity investments.

Inverse Currency Risk: The Fund is indirectly exposed to inverse (opposite) currency risk due to any ARKK's investments that are denominated in foreign currencies. As ARKK's net asset value is based on the U.S. dollar, ARKK may gain value if the local currency of a foreign market appreciates against the U.S. dollar, even if the local currency value of ARKK's holdings goes down. Currency exchange rates can be volatile and unpredictable, which may beneficially affect ARKK, and therefore the Fund. Delays in converting or transferring U.S. dollars to foreign currencies for purchasing portfolio investments may enhance ARKK's performance, including because any delay could result in ARKK securing an investment opportunity at a lower price than originally intended, or accruing interest on cash holdings. These factors could result in gains to ARKK's share price and therefore losses to the Fund.

Inverse Disruptive Innovation Risk: The Fund is inversely exposed to companies ARKK's investment adviser believes are capitalizing on disruptive innovation indirectly which subjects the Fund to the risks if such companies perform well. ARKK invests in companies that ARKK's investment adviser believes are capitalizing on disruptive innovation and developing technologies to displace older technologies or create new markets, and they may in fact do so. Companies that initially develop a novel technology may be able to capitalize on the technology. ARKK may invest in a company that does not currently derive any revenue from disruptive innovations or technologies, but such companies may derive significant revenue from disruptive innovations or technologies in the future. A disruptive innovation or technology may constitute a large portion of a company's overall business. As a result, the success of a disruptive innovation or technology may materially affect the value of the equity securities issued by the company.

Inverse Health Care Sector Risk: The Fund is exposed to companies in the health care sector indirectly which subjects the Fund to the inverse risks associated with such companies. The health care sector may benefit from government regulations and government health care programs, steady or increasing reimbursement for medical expenses, stability or reductions in the cost of medical products and services, and product liability claims, among other factors. In addition, the sector is driven by a consistent demand for healthcare services and products, which may be further amplified by an aging global population and increasing health awareness. Innovations in medical technology, treatments, and pharmaceuticals may lead to new product lines and services, potentially boosting company revenues and share price performance. Additionally, healthcare is somewhat insulated from economic downturns because medical care is a necessity rather than a luxury, leading to stable revenue streams. Government and private investment in healthcare, along with supportive regulations, can also contribute to the sector's growth. Additionally, strategic partnerships, mergers, and acquisitions within the industry can lead to enhanced research capabilities and accelerated growth, which may result in high growth potential. These combined factors can lead to robust performance for healthcare companies' share prices, which, in turn, would hurt the Fund's performance.

- *Inverse Biotechnology Company Risk:* Biotechnology stocks may perform well due to the sector's strong potential for innovation and breakthroughs in medicine. Biotechnology firms are often at the forefront of developing novel therapies, drugs, and medical technologies, addressing unmet medical needs and creating significant value when successful. Moreover, biotechnology companies often benefit from robust patent protections, providing them with a competitive edge and potential revenue streams.
- *Inverse Pharmaceutical Company Risk:* Pharmaceutical company stocks may perform well due to the essential and inelastic demand for their products, as medications and treatments may be crucial for health and well-being. These companies may have strong pipelines of drugs in various stages of development, offering the potential for substantial revenues upon successful approval and market entry. Additionally, their global reach and diversification across therapeutic areas provide resilience against market volatility.

Inverse Information Technology Sector Risk: The Fund is exposed to companies in the information technology sector indirectly which subjects the Fund to the inverse risks associated with such companies. The information technology sector may experience robust performance, due to its pivotal role in the ongoing digital transformation in various industries. The sector's prospects may be buoyed by rapid technological innovation, escalating global internet penetration, and an augmented reliance on cloud computing and data analytics.

Inverse Internet Companies Risk: Internet entities may prove well-positioned to capitalize from a continued growth in global internet adoption, and a significant migration of services and products to digital platforms. These entities often leverage network effects, where the incremental value of their services escalates with user proliferation, fostering strong user base expansion and the potential for material profit margins. Moreover, the extensive data troves they amass may enable precision-targeted advertising and service offerings, which may generate strong revenue streams.

Inverse Semiconductor Companies Risk: The semiconductor industry may gain from escalating demand for electronic devices and the burgeoning proliferation of cutting-edge technologies such as 5G, artificial intelligence, and the Internet of Things (IoT). Semiconductors, being the primary components of electronic devices, will likely prove indispensable for ongoing technological innovation. Despite susceptibility to cyclical market dynamics, the industry's long-term outlook appears bullish, propelled by the continued pursuit of more sophisticated and potent semiconductor solutions across a multitude of sectors.

Inverse Software Companies Risk: Software companies appear strategically positioned for growth, driven by demand for digital solutions across other industries. The transition towards subscription-based models (Software as a Service - SaaS) may provide a consistent revenue influx and fortify customer retention. These companies may benefit from substantial scalability, enabling user base augmentation with minimal incremental costs. Moreover, continued innovation and the development of specialized solutions tailored to diverse industry-specific requisites may present ample opportunities for growth and market penetration.

NVDA Price Appreciation Risk. The YieldMax™ Short NVDA Option Income Strategy ETF purchases and sells call and put option contracts that are based on the share price of NVDA common stock. This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund's indirect inverse exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security's share price **increases. If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses.** The Fund may also be subject to the following risks:

Indirect Investment in NVDA Risk. Nvidia Corporation is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of Nvidia Corporation but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be adversely impacted by increases in the share price of the Underlying Security.

Underlying Security Trading Risk. The trading price of the Underlying Security may become less volatile over time, which could have an adverse impact on the Fund's performance. The Fund's synthetic covered put strategy is designed to benefit from significant price fluctuations in the Underlying Security. However, if the Underlying Security experiences reduced volatility, it may lead to a decrease in the Fund's potential returns.

Historically, the Underlying Security's shares have exhibited substantial price swings, but there is a possibility that market conditions, investor sentiment, or other factors may contribute to decreased volatility in the future. Such reduced volatility could limit the opportunities for the Fund to profit from its credit spread positions, as the strategy relies on price differentials between options with varying strike prices.

It's important to note that the Fund's performance is closely tied to the dynamics of the Underlying Security's share price. As such, any significant reduction in the volatility of the Underlying Security's share price may present challenges for the Fund's synthetic covered put strategy and may affect its ability to achieve its investment objectives. Investors should consider this potential risk when evaluating their investment in the Fund.

NVDA Good Performance Risk. Nvidia Corporation may meet or exceed its publicly announced expectations or guidelines regarding its business, which could potentially lead to a rise in the price of the Underlying Security. Nvidia Corporation regularly provides guidance concerning its anticipated financial and business performance, including sales and production projections, future revenues, gross margins, profitability, and cash flows. However, forecasting future events and identifying key factors affecting business conditions inherently involves uncertainty. Nvidia Corporation's guidance may ultimately prove accurate or may prove underestimated, as it relies on assumptions such as global and local economic conditions, anticipated production and sales volumes, average sales prices, supplier and commodity costs, and planned cost reductions. If Nvidia Corporation's guidance is accurate or varies positively from actual results, NVDA's share price could increase significantly and, as a result, the Fund may suffer significant losses.

NVDA is a leader in the semiconductor industry, and may be well-positioned for sustained performance, driven by its strong market share in graphics processing units (GPUs) and newer ventures in artificial intelligence (AI) and autonomous driving. As the global economy becomes increasingly digitized, NVDA's GPUs may remain integral for high-performance computing, gaming, and data centers, sectors, which may continue to experience solid growth. NVDA's foray into AI, with its comprehensive ecosystem and hardware suited for machine learning workloads, may place it at the nexus of an industry poised for substantial growth. Additionally, its strategic partnerships and advancements in the autonomous vehicle space may positively augment its diversified portfolio. With its R&D, strong intellectual property, and strategic acquisitions, Nvidia may capitalize on an expanding demand across these sectors.

Inverse Semiconductor Companies Risk: The semiconductor industry may gain from escalating demand for electronic devices and the burgeoning proliferation of cutting-edge technologies such as 5G, artificial intelligence, and the Internet of Things (IoT). Semiconductors, being the primary components of electronic devices, will likely prove indispensable for ongoing technological innovation. Despite susceptibility to cyclical market dynamics, the industry's long-term outlook appears bullish, propelled by the continued pursuit of more sophisticated and potent semiconductor solutions across a multitude of sectors.

COIN Price Appreciation Risk. The YieldMax™ Short COIN Option Income Strategy ETF purchases and sells call and put option contracts that are based on the share price of COIN common stock. This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund's indirect inverse exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security's share price **increases. If the share price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses.** The Fund may also be subject to the following risks:

Indirect Investment in COIN Risk. Coinbase Global, Inc. is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate

actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of Coinbase Global, Inc. but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be adversely impacted by increases in the share price of the Underlying Security.

Underlying Security Trading Risk. The trading price of the Underlying Security may become less volatile over time, which could have an adverse impact on the Fund's performance. The Fund's synthetic covered put strategy is designed to benefit from significant price fluctuations in the Underlying Security. However, if the Underlying Security experiences reduced volatility, it may lead to a decrease in the Fund's potential returns.

Historically, the Underlying Security's shares have exhibited substantial price swings, but there is a possibility that market conditions, investor sentiment, or other factors may contribute to decreased volatility in the future. Such reduced volatility could limit the opportunities for the Fund to profit from its credit spread positions, as the strategy relies on price differentials between options with varying strike prices.

It's important to note that the Fund's performance is closely tied to the dynamics of the Underlying Security's share price. As such, any significant reduction in the volatility of the Underlying Security's share price may present challenges for the Fund's synthetic covered put strategy and may affect its ability to achieve its investment objectives. Investors should consider this potential risk when evaluating their investment in the Fund.

COIN Good Performance Risk. Coinbase Global, Inc. may meet or exceed its publicly announced expectations or guidelines regarding its business, which could potentially lead to a rise in the price of the Underlying Security. Coinbase Global, Inc. regularly provides guidance concerning its anticipated financial and business performance, including sales and production projections, future revenues, gross margins, profitability, and cash flows. However, forecasting future events and identifying key factors affecting business conditions inherently involves uncertainty. Coinbase Global, Inc.'s guidance may ultimately prove accurate or may prove underestimated, as it relies on assumptions such as global and local economic conditions, anticipated production and sales volumes, average sales prices, supplier and commodity costs, and planned cost reductions. If Coinbase Global, Inc.'s guidance is accurate or varies positively from actual results, COIN's share price could increase significantly and, as a result, the Fund may suffer significant losses.

Inverse Digital Assets Sector Risk: The digital assets sector encapsulates a wide array of digital currencies, tokens, and other forms of digital value representation, including non-fungible tokens (NFTs). Digital assets have the potential to redefine asset ownership, transferability, and accessibility, leveraging the principles of decentralization and blockchain technology. The sector may experience substantial growth, especially if mainstream acceptance and institutional interest continues or accelerates. Digital assets offer diversification benefits, given their low correlation with traditional asset classes, which could lead to their inclusion in a broader range of investment portfolios. Moreover, the progressive regulatory clarity and the development of sophisticated trading, custody, and risk management solutions are factors that could foster the sector's growth. Further, a number of bitcoin-focused ETFs (e.g., ETFs that invest in spot bitcoin) have recently commenced operations. These bitcoin-focused ETFs may similarly foster the sector's growth, which could significantly increase the share price of COIN's common stock.

Inverse Financials Sector Risk: The financials sector, encompassing banks, insurance companies, and diversified financial services, may experience growth, driven by a combination of macroeconomic factors and technological innovation. As interest rates rise, banks stand to benefit from widening net interest margins, improving profitability. Insurers may see enhanced investment income as yields increase, bolstering their financial strength. Moreover, the sector is undergoing a technological transformation, with the adoption of digital banking, fintech innovations, and data analytics enhancing operational efficiencies, customer engagement, and risk management capabilities. This digital evolution may unlock new revenue streams and improve competitive positioning.

Inverse Blockchain Sector Risk: The blockchain sector represents a frontier of technological innovation, underpinning not only cryptocurrencies but a spectrum of applications across industries. Its intrinsic attributes of immutability, transparency, and efficiency may make it a compelling foundation for solutions in supply chain management, identity verification, and beyond. If more enterprises and governments recognize its potential to streamline operations and reduce costs, the adoption of blockchain technology may accelerate. The sector may also benefit from the growing interest in decentralized finance (DeFi) and the tokenization of assets, which expand the use cases for blockchain. Investments in companies that develop, implement, or adopt blockchain technology could thus be well-positioned to capitalize on the sector's growth, as it moves from experimental applications to mainstream adoption.

AAPL Price Appreciation Risk. The YieldMax™ Short AAPL Option Income Strategy ETF purchases and sells call and put option contracts that are based on the share price of AAPL common stock. This strategy subjects the Fund to certain of the same risks as if it shorted shares of the Underlying Security, even though it does not. By virtue of the Fund's indirect inverse exposure to changes in the share price of the Underlying Security, the Fund is subject to the risk that the Underlying Security's share price **increases. If the share**

price of the Underlying Security increases, the Fund will likely lose value and, as a result, the Fund may suffer significant losses. The Fund may also be subject to the following risks:

Indirect Investment in AAPL Risk. Apple Inc. is not affiliated with the Trust, the Fund, the Adviser or their respective affiliates and is not involved with this offering in any way and has no obligation to consider your Shares in taking any corporate actions that might affect the value of Shares. Investors in the Fund will not have voting rights and will not be able to influence the management of Apple Inc. but will be exposed to the performance of the Underlying Security. Investors in the Fund will not have rights to receive dividends or other distributions or any other rights with respect to the Underlying Security, but will be adversely impacted by increases in the share price of the Underlying Security.

Underlying Security Trading Risk. The trading price of the Underlying Security may become less volatile over time, which could have an adverse impact on the Fund's performance. The Fund's synthetic covered put strategy is designed to benefit from significant price fluctuations in the Underlying Security. However, if the Underlying Security experiences reduced volatility, it may lead to a decrease in the Fund's potential returns.

Historically, the Underlying Security's shares have exhibited substantial price swings, but there is a possibility that market conditions, investor sentiment, or other factors may contribute to decreased volatility in the future. Such reduced volatility could limit the opportunities for the Fund to profit from its credit spread positions, as the strategy relies on price differentials between options with varying strike prices.

It's important to note that the Fund's performance is closely tied to the dynamics of the Underlying Security's share price. As such, any significant reduction in the volatility of the Underlying Security's share price may present challenges for the Fund's synthetic covered put strategy and may affect its ability to achieve its investment objectives. Investors should consider this potential risk when evaluating their investment in the Fund.

AAPL Good Performance Risk. Apple Inc. may meet or exceed its publicly announced expectations or guidelines regarding its business, which could potentially lead to a rise in the price of the Underlying Security. Apple Inc. regularly provides guidance concerning its anticipated financial and business performance, including sales and production projections, future revenues, gross margins, profitability, and cash flows. However, forecasting future events and identifying key factors affecting business conditions inherently involves uncertainty. Apple Inc.'s guidance may ultimately prove accurate or may prove underestimated, as it relies on assumptions such as global and local economic conditions, anticipated production and sales volumes, average sales prices, supplier and commodity costs, and planned cost reductions. If Apple Inc.'s guidance is accurate or varies positively from actual results, AAPL's share price could increase significantly and, as a result, the Fund may suffer significant losses.

In addition, AAPL currently has strong financial health, innovative prowess, and a strong global brand presence. AAPL has substantial cash reserves and may continue to provide shareholder-friendly policies, such as dividends and share buybacks, which increase the value of the Underlying Security.

Inverse Apple Product Risk: Apple Inc.'s products may possess a strong potential for success, through an integration of innovative technology, design aesthetics, and user-friendly interfaces. AAPL has a loyal customer base, that is often eager to adopt the latest iterations of its product offerings. The brand's ecosystem, characterized by interconnectivity between devices and services, enhances user retention and may promote a higher lifetime value per customer. AAPL's offers diversified product lines, including wearables and services, has broadened its revenue streams. These expansions, coupled with AAPL's push into subscription services, may bolster its capacity to generate stable, recurring revenue.

Counterparty Risk. Each Fund is subject to counterparty risk by virtue of its investments in options contracts. Transactions in some types of derivatives, including options, are required to be centrally cleared ("cleared derivatives"). In a transaction involving cleared derivatives, a Fund's counterparty is a clearing house rather than a bank or broker. Since the Funds are not members of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Funds will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, a Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Customer funds held at a clearing organization in connection with any options contracts are held in a commingled omnibus account and are not identified to the name of the clearing member's individual customers. As a result, assets deposited by a Fund with any clearing member as margin for options may, in certain circumstances, be used to satisfy losses of other clients of a Fund's clearing member. In addition, although clearing members guarantee performance of their clients' obligations to the clearing house, there is a risk that the assets of a Fund might not be fully protected in the event of the clearing member's bankruptcy, as a Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for the relevant account class. Each Fund is also subject to the risk that a limited number of clearing members are willing to transact on the Fund's behalf, which heightens the risks associated with a clearing member's default. This risk is greater for the Funds as they seek to hold options contracts on a single security, and not a broader range of options contracts, which may limited the number of clearing members that are willing to transact on the Funds' behalf. If a clearing member defaults a Fund could lose some or all of the benefits of a transaction entered into by the Fund with the clearing

member. If a Fund cannot find a clearing member to transact with on the Fund's behalf, the Fund may be unable to effectively implement its investment strategy.

Derivatives Risk. The Funds' derivative investments have risks, including the imperfect inverse correlation between the value of such instruments and the underlying assets; the loss of principal, including the potential loss of amounts greater than the initial amount invested in the derivative instrument; the possible default of the other party to the transaction; and illiquidity of the derivative investments. Use of derivatives could also result in a loss if the counterparty to the transaction does not perform as promised, including because of such counterparty's bankruptcy or insolvency. This risk may be greater during volatile market conditions. Other risks include the inability to close out a position because the trading market becomes illiquid (particularly in the OTC markets) or the availability of counterparties becomes limited for a period of time. In addition, the presence of speculators in a particular market could lead to price distortions.

Certain of the Funds' transactions in derivatives could also affect the amount, timing, and character of distributions to shareholders, which may result in a Fund realizing more short-term capital gain and ordinary income subject to tax at ordinary income tax rates than it would if it did not engage in such transactions, which may adversely impact such Fund's after-tax returns.

In addition, each Fund's investments in derivatives are subject to the following risks:

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. For each of the Funds, the value of the options contracts in which the Fund invests are substantially influenced by the value of the applicable Underlying Security. The Funds may experience substantial downside from specific option positions and certain option positions held by a Fund may expire worthless. The options held by the Funds are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly moves with the inverse of the value of the underlying instrument. However, prior to such date, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect inverse correlation between the movement in values options contracts and the reference asset, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Funds will be determined based on market quotations or other recognized pricing methods. Additionally, as each Fund intends to continuously maintain its synthetic covered put strategy on the applicable Underlying Security through the use of options contracts, as the options contracts it holds are traded, exercised or expire, it will enter into new options contracts, a practice referred to as "rolling." If the expiring options contracts do not generate proceeds enough to cover the cost of entering into new options contracts, a Fund may experience losses.

Distribution Risk. As part of the Funds' investment objectives, the Funds seek to provide current monthly income. There is no assurance that the Funds will make a distribution in any given month. If a Fund makes distributions, the amounts of such distributions will likely vary greatly from one distribution to the next. Additionally, monthly distributions, if any, may consist of returns of capital, which would decrease the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

ETF Risk.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Funds have a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. Each Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, a Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., derivative instruments). In such a case, a Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause a Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, a Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. By paying out higher annual capital gain distributions, investors may be subjected to increased capital gains taxes. Additionally, there may be brokerage costs or taxable gains or losses that may be imposed on a Fund in connection with a cash redemption that may not have occurred if the Fund had made a redemption in-kind. These costs could decrease the value of a Fund to the extent they are not offset by a transaction fee payable by an AP.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that the Fund will meet its investment objective.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as the Exchange, and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. This risk may be greater for the Funds as they seek to have exposure to a single reference security as opposed to a more diverse portfolio like a traditional pooled investment. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of a Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at a market price that may be below, at or above a Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of a Fund will continue to be met or will remain unchanged. In the event of an unscheduled market close for options contracts that reference a single security, such as any Underlying Security being halted or a market wide closure, settlement prices will be determined by the procedures of the listing exchange of the options contracts. As a result, a Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

High Portfolio Turnover Risk. The Funds may actively and frequently trade all or a significant portion of the securities in its portfolio. A high portfolio turnover rate increases transaction costs, which may increase a Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Funds due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Liquidity Risk. Some securities held by the Funds, including options contracts, may be difficult to sell or be illiquid, particularly during times of market turmoil. This risk is greater to the Funds as they will hold options contracts on a single security, and not a broader range of options contracts. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, epidemics/pandemics, new legislation or regulatory changes inside or outside the United States. Illiquid securities may be difficult to value, especially in changing or volatile markets. If a Fund is forced to sell an illiquid security at an unfavorable time or price, such Fund may be adversely impacted. Certain market conditions or restrictions, such as market rules related to short sales, may prevent a Fund from limiting losses, realizing gains or achieving a high correlation with the applicable Underlying Security. There is no assurance that a security that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Funds.

Money Market Instrument Risk. The Funds may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Repurchase agreements are contracts in which a seller of securities agrees to buy the securities back at a specified time and price. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments, including money market funds, may lose money through fees or other means.

NAV Erosion Risk Due to Distributions. If a Fund makes a distribution, the Fund's NAV will typically drop by the amount of the distribution on the related ex-dividend date. The repeated payment of distributions, if any, by a Fund may significantly erode the Fund's NAV and trading price over time. As a result, an investor may suffer significant losses to their investment.

New/Newer Fund Risk. Each Fund is recently organized with no or limited operating history. As a result, prospective investors do not have a track record (or have a limited track record) on which to base their investment decisions. There can be no assurance that the Funds will grow to or maintain an economically viable size.

Non-Diversification Risk. Because each Fund is "non-diversified," a Fund may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a

single issuer or a smaller number of issuers could cause a Fund's overall value to decline to a greater degree than if such Fund held a more diversified portfolio. This may increase the Fund's volatility and have a greater impact on such Fund's performance.

Operational Risk. Each Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Funds' service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. Each Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect a Fund's ability to meet its investment objective. Although the Funds and the Funds' investment advisor seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Price Participation Risk. Each Fund employs an investment strategy that includes the sale of put option contracts, which limits the degree to which such Fund will participate in the inverse of decreases in value experienced by the applicable Underlying Security over the Put Period. This means that if the Underlying Security experiences a decrease in value below the strike price of the sold put options during a Put Period, the applicable Fund will likely not experience the inverse (increase) to the same extent and may significantly underperform the inverse of such Underlying Security over the Put Period. Additionally, because each Fund is limited in the degree to which it will participate in decreases in value experienced by the Underlying Security over each Put Period but has significant exposure to any increases in value experienced by the Underlying Security over the Put Period, the NAV of the Fund may decrease over any given time period. Each Fund's NAV is dependent on the value of each options portfolio, which is based principally upon the inverse of the performance of the Underlying Security. The degree of participation in Underlying Security gains a Fund will experience will depend on prevailing market conditions, especially market volatility, at the time such Fund enters into the sold put option contracts and will vary from Put Period to Put Period. The value of the options contracts is affected by changes in the value and dividend rates of the Underlying Security, changes in interest rates, changes in the actual or perceived volatility of the Underlying Security and the remaining time to the options' expiration, as well as trading conditions in the options market. As the price of the Underlying Security changes and time moves towards the expiration of each Put Period, the value of the options contracts, and therefore a Fund's NAV, will change. However, it is not expected for a Fund's NAV to directly inversely correlate on a day-to-day basis with the returns of the Underlying Security. The amount of time remaining until the option contract's expiration date affects the impact of the potential options contract income on a Fund's NAV, which may not be in full effect until the expiration date of the Fund's options contracts. Therefore, while changes in the price of the Underlying Security will result in changes to a Fund's NAV, the Funds generally anticipate that the rate of change in a Fund's NAV will be different than from the inverse in changes experienced by the Underlying Security.

Purchased OTM Call Options Risk. Each Fund's strategy is subject to potential losses if the applicable Underlying Security shares increase in value, which may not be offset by the purchase of out-of-the-money (OTM) call options. Each Fund purchases OTM calls to seek to manage (cap) the Fund's potential losses from the Fund's short exposure to the applicable Underlying Security if it appreciates significantly in value. However, the OTM call options will cap the Fund's losses only to the extent that the share price of the applicable Underlying Security increases to a price that is at or above the strike price of the purchased OTM call options. Any increase in the share price of the applicable Underlying Security to a price that is below the strike price of the purchased OTM call options will result in a corresponding loss for the Fund. For example, if the OTM call options have a strike price that is approximately 70% above the then-current share price of the Underlying Security at the time of the call purchase, and the share price of the Underlying Security increases by 60% during the term of the purchased OTM call options, the Fund will lose approximately 60% of its value. If instead, the share price of the Underlying Security increases by 80% during the term of the purchased OTM call options, the Fund's losses will be capped at approximately 70%. Notwithstanding the foregoing, if the OTM call options have a strike price that is approximately 100% above the then-current share price of the Underlying Security at the time of the call option purchase, and the share price of the Underlying Security increases by at least 100% during the term of the purchased OTM call options, the Fund will lose all its value. Lastly, each Fund bears the costs of purchasing the OTM calls and such costs will decrease the Fund's value and/or any income otherwise generated by the Fund's investment strategy.

Put Writing Strategy Risk. The path dependency (*i.e.*, the continued use) of a Fund's put writing strategy will impact the extent that a Fund participates in the inverse of the negative price returns of the Underlying Security and, in turn, the Fund's returns, both during the term of the sold put options and over longer time periods. If, for example, each month the Fund were to sell 7% out-of-the-money put options having a one-month term, the Fund's participation in the inverse of negative price returns of the Underlying Security will be capped at 7% in any given month. However, over a longer period (*e.g.*, 5 months), the Fund should not be expected to participate fully in the first 35% (*i.e.*, 5 months x 7%) of the inverse of negative price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security's share price has decreased by at least that much over such period, if during any month over that period the Underlying Security had a return less than 7%. This example illustrates that both a Fund's participation in the inverse of the negative price returns of an Underlying Security and its returns will depend not only on the share price of the Underlying Security but also on the path that such share price takes over time.

Covered Put Spread Strategy Risk. The path dependency of the Fund's Covered Put Spread Strategy will impact the extent to which the Fund participates in the price decreases of the Underlying Security and, in turn, the Fund's returns, both during the term of the put spreads and over longer time periods. If, for example, each month the Fund were to sell a put spread where the written put option is 7% out-of-the-money and the purchased put option is 15% out-of-the-money, the Fund's participation in the negative price returns of the

Underlying Security will be limited beyond the strike price of the purchased put option. However, over a longer period (e.g., 5 months), the Fund should not be expected to participate fully in the first 35% (i.e., 5 months x 7%) of any negative price returns of the Underlying Security, or the Fund may even lose money, even if the Underlying Security's share price has decreased by at least that much over such period, if during any month over that period the Underlying Security's share price decreased by less than 7%. This example illustrates that both the Fund's participation in the negative price returns of the Underlying Security and its returns will depend not only on the price of the Underlying Security but also on the path that the Underlying Security takes over time. Additionally, because the strategy involves purchasing a put option to offset the short put position, the net premium collected is reduced compared to a standalone put-writing strategy, potentially limiting the income generated and further constraining the Fund's returns in certain market conditions.

Market Events Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation, changes in the actual or perceived creditworthiness of issuers, and general market liquidity. The Fund is subject to the risk that geopolitical events will disrupt securities and other financial markets and adversely affect global economies and markets. Local, regional or global events such as war, military conflicts, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, or other events could have a significant impact on the Fund and its investments. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Significant market volatility and market downturns may limit the Funds' ability to sell securities and obtain long exposure to securities, and a Funds' sales and long exposures may exacerbate the market volatility and downturn. Under such circumstances, a Fund may have difficulty achieving its investment objective for one or more trading days, which may adversely impact a Fund's returns on those days and periods inclusive of those days. Alternatively, a Fund may incur higher costs in order to achieve its investment objective and may be forced to purchase and sell securities (including other ETFs' shares) at market prices that do not represent their fair value (including in the case of an ETF, its NAV) or at times that result in differences between the price such Fund receives for the security and the market closing price of the security. Under those circumstances, a Fund's ability to track the applicable Underlying Security is likely to be adversely affected, the market price of Shares may reflect a greater premium or discount to NAV and bid-ask spreads in Shares may widen, resulting in increased transaction costs for secondary market purchasers and sellers.

Single Issuer Risk. Issuer-specific attributes may cause an investment in a Fund to be more volatile than a traditional pooled investment which diversifies risk or the market generally. The value of the Fund, which focuses an individual security (the Underlying Security), may be more volatile than a traditional pooled investment or the market as a whole and may perform differently from the value of a traditional pooled investment or the market as a whole.

Tax Risk. The Funds intend to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. As a RIC, each Fund will not be subject to U.S. federal income tax on the portion of its net investment income and net capital gain that it distributes to Shareholders, provided that it satisfies certain requirements of the Code. If a Fund does not qualify as a RIC for any taxable year and certain relief provisions are not available, the Fund's taxable income will be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. To comply with the asset diversification test applicable to a RIC, each Fund will attempt to ensure that the value of options it holds is never 25% of the total value of Fund assets at the close of any quarter. If a Fund's investments in options were to exceed 25% of the Fund's total assets at the end of a tax quarter, the Fund, generally, has a grace period to cure such lack of compliance. If a Fund fails to timely cure, it may no longer be eligible to be treated as a RIC.

U.S. Government and U.S. Agency Obligations Risk. The Funds may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

PORTFOLIO HOLDINGS

Information about each Fund's daily portfolio holdings will be available on the Funds' website at www.yieldmaxetfs.com.

A complete description of each Fund's policies and procedures with respect to the disclosure of a Fund's portfolio holdings is available in the Fund's SAI.

MANAGEMENT

Investment Adviser

Tidal Investments LLC (“Tidal” or the “Adviser”), located at 234 West Florida Street, Suite 203, Milwaukee, Wisconsin 53204, is an SEC registered investment adviser and a Delaware limited liability company. Tidal was founded in March 2012 and is dedicated to understanding, researching and managing assets within the expanding ETF universe. As of January 31, 2025, Tidal had assets under management of approximately \$29.72 billion and served as the investment adviser or sub-adviser for 194 registered funds.

Tidal serves as investment adviser to the Funds and has overall responsibility for the general management and administration of the Funds pursuant to an investment advisory agreement with the Trust, on behalf of each Fund (the “Advisory Agreement”). The Adviser also arranges for transfer agency, custody, fund administration, and all other related services necessary for the Fund to operate. For the services provided to the Funds, each Fund pays the Adviser a unified management fee of 0.99%, which is calculated daily and paid monthly, at an annual rate based on such Fund’s average daily net assets.

Under the Advisory Agreement, in exchange for a single unitary management fee from the Fund, the Adviser has agreed to pay all expenses incurred by such Fund except for interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, extraordinary expenses, distribution fees and expenses paid by a Fund under any distribution plan adopted pursuant to Rule 12b-1 under the 1940 Act, and the unitary management fee payable to the Adviser (collectively, the “Excluded Expenses”).

Agreements

A discussion regarding the basis for the Board’s approval of each Fund’s Advisory Agreement is available in the October 31, 2024 Certified Shareholder Report on Form N-CSR.

Portfolio Managers

The following individuals (each, a “Portfolio Manager”) have served as portfolio managers of each Fund since inception in 2024. The Portfolio Managers are jointly responsible for the day-to-day management of each Fund.

Jay Pestrichelli, Portfolio Manager for the Adviser

Mr. Pestrichelli joined the Adviser in 2025 and is Chief Trading Officer of the Adviser’s ETF Trading and Portfolio Management team. Mr. Pestrichelli has over 30 years of experience in the financial markets. Prior to joining the Adviser, Mr. Pestrichelli co-founded ZEGA Financial, LLC (“ZEGA”) where he led the development and execution of ZEGA’s investment strategies since its inception in 2011. He is also the author of the best-selling book “Buy & Hedge: The Five Iron Rules for Investing Over the Long Term.” Prior to founding ZEGA, Mr. Pestrichelli spent 12 years managing and growing the online trading business for TD Ameritrade from 1999 to 2010. Mr. Pestrichelli has a Bachelor degree in Behavioral Science from Concordia College.

Michael Venuto, Chief Investment Officer for the Adviser

Mr. Venuto is a co-founder and has been the Chief Investment Officer of the Adviser since 2012. Mr. Venuto is an ETF industry veteran with over a decade of experience in the design and implementation of ETF-based investment strategies. Previously, he was Head of Investments at Global X Funds where he provided portfolio optimization services to institutional clients. Before that, he was Senior Vice President at Horizon Kinetics where his responsibilities included new business development, investment strategy and client and strategic initiatives. Mr. Venuto studied Philosophy and Religion at NC State University.

Christopher P. Mullen, Portfolio Manager for the Adviser

Christopher P. Mullen serves as Portfolio Manager at the Adviser, having joined the firm in January 2024. From September 2019 to December 2023, he was a Portfolio Manager at Vest Financial LLC, where he managed exchange-traded funds, mutual funds and retirement fund portfolios. Mr. Mullen previously served as a Senior Portfolio Analyst at ProShares Advisors LLC from September 2016 until September 2019. Prior to that, Mr. Mullen served as associate portfolio manager at USCF Investments LLC from February 2013 to September 2016. Mr. Mullen received a Master of Business Administration from the University of Maryland. He also holds a dual bachelor’s degree in global politics and history from Marquette University.

The Funds’ SAI provides additional information about each portfolio manager’s compensation structure, other accounts that each portfolio manager manages, and each portfolio manager’s ownership of Shares.

Fund Supporters

The Adviser, Tidal ETF Services LLC (an affiliate of the Adviser and the Funds’ administrator), ZEGA, Lucania Investments LLC (“Lucania”), and Level ETF Ventures LLC (“Level,” and together with the Adviser, ZEGA and Lucania, the “Supporters” and each a

“Supporter”) have entered into a fund support agreement pursuant to which each Supporter has agreed to provide financial support (as described below) to the Funds. Every month, the unitary management fees for each Fund are calculated and paid to the Adviser, and the Adviser retains a portion of the unitary management fees from each Fund. In return for its financial support for the Funds, the Adviser has agreed to pay each Supporter a portion of any remaining profits generated by the unitary management fees for the Funds. If the aggregate amount of the unitary management fees for the Funds exceeds the aggregate of the Funds’ operating expenses and the Adviser-retained amounts, that excess amount is considered “remaining profit.” In that case, the Adviser will pay a portion of the remaining profits to the Supporters. Further, if the aggregate amount of the unitary management fees for the Funds is less than the aggregate of Funds’ operating expenses and the Adviser-retained amounts, each Supporter is obligated to reimburse the Adviser for a portion of the shortfall.

HOW TO BUY AND SELL SHARES

Each Fund issues and redeems Shares only in Creation Units at the NAV per share next determined after receipt of an order from an AP. Only APs may acquire Shares directly from a Fund, and only APs may tender their Shares for redemption directly to the Funds, at NAV. APs must be a member or participant of a clearing agency registered with the SEC and must execute a Participant Agreement that has been agreed to by the Distributor (defined below), and that has been accepted by a Fund’s transfer agent, with respect to purchases and redemptions of Creation Units. Once created, Shares trade in the secondary market in quantities less than a Creation Unit.

In order to purchase Creation Units of a Fund, an AP must generally deposit a designated portfolio of equity securities (the “Deposit Securities”) and/or a designated amount of U.S. cash. Purchases and redemptions of Creation Units primarily with cash, rather than through in-kind delivery of portfolio securities, may cause the Funds to incur certain costs. These costs could include brokerage costs or taxable gains or losses that it might not have incurred if it had made redemption in-kind. These costs could be imposed on a Fund, and thus decrease the Fund’s NAV, to the extent that the costs are not offset by a transaction fee payable by an AP. Most investors buy and sell Shares in secondary market transactions through brokers. Individual Shares are listed for trading on the secondary market on the Exchange and can be bought and sold throughout the trading day like other publicly traded securities.

When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offer price in the secondary market on each leg of a round trip (purchase and sale) transaction. In addition, because secondary market transactions occur at market prices, you may pay more than NAV when you buy Shares, and receive less than NAV when you sell those Shares.

Book Entry

Shares are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company (“DTC”) or its nominee is the record owner of all outstanding Shares.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. DTC’s participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book-entry or “street name” through your brokerage account.

Frequent Purchases and Redemptions of Shares

None of the Funds imposes any restrictions on the frequency of purchases and redemptions of Shares. In determining not to approve a written, established policy, the Board evaluated the risks of market timing activities by a Fund’s shareholders. Purchases and redemptions by APs, who are the only parties that may purchase or redeem Shares directly with a Fund, are an essential part of the ETF process and help keep Share trading prices in line with the NAV. As such, the Funds accommodate frequent purchases and redemptions by APs. However, the Board has also determined that frequent purchases and redemptions for cash may increase tracking error and portfolio transaction costs and may lead to the realization of capital gains. To minimize these potential consequences of frequent purchases and redemptions, each Fund employs fair value pricing and may impose transaction fees on purchases and redemptions of Creation Units to cover the custodial and other costs incurred by such Fund in effecting trades. In addition, the Funds and the Adviser reserve the right to reject any purchase order at any time.

Determination of Net Asset Value

Each Fund’s NAV is calculated as of the scheduled close of regular trading on the New York Stock Exchange (“NYSE”), generally 4:00 p.m. Eastern Time, each day the NYSE is open for regular business. The NAV for the Funds is calculated by dividing such Fund’s net assets by its Shares outstanding.

In calculating its NAV, each Fund generally value its assets on the basis of market quotations, last sale prices, or estimates of value furnished by a pricing service or brokers who make markets in such instruments. If such information is not available for a security or

other asset held by a Fund or is determined to be unreliable, the security or other asset will be valued at fair value estimates under guidelines established by the Adviser (as described below).

Fair Value Pricing

The Board has designated the Adviser as the “valuation designee” for the Fund under Rule 2a-5 of the 1940 Act, subject to its oversight. The Adviser has adopted procedures and methodologies, which have been approved by the Board to fair value Fund investments whose market prices are not “readily available” or are deemed to be unreliable. For example, such circumstances may arise when: (i) an investment has been delisted or has had its trading halted or suspended; (ii) an investment’s primary pricing source is unable or unwilling to provide a price; (iii) an investment’s primary trading market is closed during regular market hours; or (iv) an investment’s value is materially affected by events occurring after the close of the investment’s primary trading market. Generally, when fair valuing an investment, the Adviser will take into account all reasonably available information that may be relevant to a particular valuation including, but not limited to, fundamental analytical data regarding the issuer, information relating to the issuer’s business, recent trades or offers of the investment, general and/or specific market conditions, and the specific facts giving rise to the need to fair value the investment. Fair value determinations are made in good faith and in accordance with the fair value methodologies included in the Adviser-adopted valuation procedures. The Adviser will fair value Fund investments whose market prices are not “readily available” or are deemed to be unreliable. Due to the subjective and variable nature of fair value pricing, there can be no assurance that the Adviser will be able to obtain the fair value assigned to the investment upon the sale of such investment.

Delivery of Shareholder Documents – Householding

Householding is an option available to certain investors of the Funds. Householding is a method of delivery, based on the preference of the individual investor, in which a single copy of certain shareholder documents can be delivered to investors who share the same address, even if their accounts are registered under different names. Householding for the Funds is available through certain broker-dealers. If you are interested in enrolling in householding and receiving a single copy of prospectuses and other shareholder documents, please contact your broker-dealer. If you are currently enrolled in householding and wish to change your householding status, please contact your broker-dealer.

DIVIDENDS, DISTRIBUTIONS, AND TAXES

Dividends and Distributions

The Funds intend to pay out dividends and interest income, if any, monthly, and distribute any net realized capital gains to its shareholders at least annually.

The Funds will declare and pay income and capital gain distributions, if any, in cash. Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available. Your broker is responsible for distributing the income and capital gain distributions to you.

Taxes

The following discussion is a summary of some important U.S. federal income tax considerations generally applicable to investments in the Funds. Your investment in a Fund may have other tax implications. Please consult your tax advisor about the tax consequences of an investment in Shares, including the possible application of foreign, state, and local tax laws.

Each Fund intends to qualify each year for treatment as a regulated investment company (a “RIC”) under the Internal Revenue Code of 1986, as amended. If it meets certain minimum distribution requirements, a RIC is not subject to tax at the fund level on income and gains from investments that are timely distributed to shareholders. However, a Fund’s failure to qualify as a RIC or to meet minimum distribution requirements would result (if certain relief provisions were not available) in fund-level taxation and, consequently, a reduction in income available for distribution to shareholders.

Unless your investment in Shares is made through a tax-exempt entity or tax-advantaged account, such as an IRA plan, you need to be aware of the possible tax consequences when a Fund makes distributions, when you sell your Shares listed on the Exchange, and when you purchase or redeem Creation Units (institutional investors only).

The following general discussion of certain U.S. federal income tax consequences is based on provisions of the Code and the regulations issued thereunder as in effect on the date of this SAI. New legislation, as well as administrative changes or court decisions, may significantly change the conclusions expressed herein, and may have a retroactive effect with respect to the transactions contemplated herein.

Taxes on Distributions. Each Fund intends to pay out dividends and interest income, if any, monthly, and distribute any net realized capital gains to its shareholders at least annually. For federal income tax purposes, distributions of net investment income are generally taxable as ordinary income or qualified dividend income. Taxes on distributions of net capital gains (if any) are determined by how long the Fund owned the investments that generated them, rather than how long a shareholder has owned their Shares. Sales of assets held

by a Fund for more than one year generally result in long-term capital gains and losses, and sales of assets held by such Fund for one year or less generally result in short-term capital gains and losses. Distributions of a Fund's net capital gain (the excess of net long-term capital gains over net short-term capital losses) that are reported by such Fund as capital gain dividends ("Capital Gain Dividends") will be taxable as long-term capital gains. Distributions of short-term capital gain will generally be taxable as ordinary income. Dividends and distributions are generally taxable to you whether you receive them in cash or reinvest them in additional Shares.

Given the investment strategy of the Fund, shareholders should not expect any qualified dividend income.

Shortly after the close of each calendar year, you will be informed of the character of any distributions received from a Fund.

In addition to the federal income tax, certain individuals, trusts, and estates may be subject to a Net Investment Income ("NII") tax of 3.8%. The NII tax is imposed on the lesser of: (i) a taxpayer's investment income, net of deductions properly allocable to such income; or (ii) the amount by which such taxpayer's modified adjusted gross income exceeds certain thresholds (\$250,000 for married individuals filing jointly, \$200,000 for unmarried individuals and \$125,000 for married individuals filing separately). Each Fund's distributions are includable in a shareholder's investment income for purposes of this NII tax. In addition, any capital gain realized by a shareholder upon a sale or redemption of shares of a Fund is includable in such shareholder's investment income for purposes of this NII tax.

In general, your distributions are subject to federal income tax for the year in which they are paid. Certain distributions paid in January, however, may be treated as paid on December 31 of the prior year. Distributions are generally taxable even if they are paid from income or gains earned by a Fund before your investment (and thus were included in the Shares' NAV when you purchased your Shares).

You may wish to avoid investing in a Fund shortly before a dividend or other distribution, because such a distribution will generally be taxable even though it may economically represent a return of a portion of your investment.

If you are neither a resident nor a citizen of the United States or if you are a foreign entity, distributions (other than Capital Gain Dividends) paid to you by a Fund will generally be subject to a U.S. withholding tax at the rate of 30%, unless a lower treaty rate applies. The Funds may, under certain circumstances, report all or a portion of a dividend as an "interest-related dividend" or a "short-term capital gain dividend," which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met.

Under the Foreign Account Tax Compliance Act ("FATCA"), the Funds may be required to withhold a generally nonrefundable 30% tax on distributions of net investment income paid to (a) certain "foreign financial institutions" unless such foreign financial institution agrees to verify, monitor, and report to the Internal Revenue Service (the "IRS") the identity of certain of its account holders, among other items (or unless such entity is otherwise deemed compliant under the terms of an intergovernmental agreement between the United States and the foreign financial institution's country of residence), and (b) certain "non-financial foreign entities" unless such entity certifies to the Fund that it does not have any substantial U.S. owners or provides the name, address, and taxpayer identification number of each substantial U.S. owner, among other items. This FATCA withholding tax could also affect a Fund's return on its investments in foreign securities or affect a shareholder's return if the shareholder holds its Fund shares through a foreign intermediary. You are urged to consult your tax adviser regarding the application of this FATCA withholding tax to your investment in a Fund and the potential certification, compliance, due diligence, reporting, and withholding obligations to which you may become subject in order to avoid this withholding tax.

For foreign shareholders to qualify for an exemption from backup withholding, described above, the foreign shareholder must comply with special certification and filing requirements. Foreign shareholders in a Fund should consult their tax advisors in this regard.

Taxes When Shares are Sold on the Exchange

Any capital gain or loss realized upon a sale of Shares generally is treated as a long-term capital gain or loss if Shares have been held for more than one year and as a short-term capital gain or loss if Shares have been held for one year or less. However, any capital loss on a sale of Shares held for six months or less is treated as long-term capital loss to the extent of Capital Gain Dividends paid with respect to such Shares. Any loss realized on a sale will be disallowed to the extent Shares of a Fund are acquired, including through reinvestment of dividends, within a 61-day period beginning 30 days before and ending 30 days after the sale of substantially identical Shares.

Taxes on Purchases and Redemptions of Creation Units

An AP having the U.S. dollar as its functional currency for U.S. federal income tax purposes who exchanges securities for Creation Units generally recognizes a gain or a loss. The gain or loss will be equal to the difference between the value of the Creation Units at the time of the exchange and the exchanging AP's aggregate basis in the securities delivered plus the amount of any cash paid for the Creation Units. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanging AP's basis in the Creation Units and the aggregate U.S. dollar market value of the securities received, plus any cash received for such Creation Units. The IRS may assert, however, that a loss that is realized upon an exchange of securities for Creation Units may not be currently deducted under the rules governing "wash sales" (for an AP who does not mark-to-market their

holdings) or on the basis that there has been no significant change in economic position. Persons exchanging securities should consult their own tax advisor with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if Shares comprising the Creation Units have been held for more than one year and as a short-term capital gain or loss if such Shares have been held for one year or less.

The Funds may include a payment of cash in addition to, or in place of, the delivery of a basket of securities upon the redemption of Creation Units. The Funds may sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Funds to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, a Fund may be less tax efficient if it includes such a cash payment in the proceeds paid upon the redemption of Creation Units.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Funds. It is not a substitute for personal tax advice. You also may be subject to foreign, state and local tax on Fund distributions and sales of Shares. Consult your personal tax advisor about the potential tax consequences of an investment in Shares under all applicable tax laws. For more information, please see the section entitled "Federal Income Taxes" in the SAI.

DISTRIBUTION

Foreside Fund Services, LLC, a wholly owned subsidiary of Foreside Financial Group (dba ACA Group) (the "Distributor"), the Funds' distributor, is a broker-dealer registered with the SEC. The Distributor distributes Creation Units for the Fund on an agency basis and does not maintain a secondary market in Shares. The Distributor has no role in determining the policies of the Funds or the securities that are purchased or sold by the Funds. The Distributor's principal address is Three Canal Plaza, Suite 100, Portland, Maine 04101.

The Board has adopted a Distribution (Rule 12b-1) Plan (the "Plan") pursuant to Rule 12b-1 under the 1940 Act. In accordance with the Plan, each Fund is authorized to pay an amount up to 0.25% of its average daily net assets each year to pay distribution fees for the sale and distribution of its Shares.

No Rule 12b-1 fees are currently paid by the Funds, and there are no plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, because the fees are paid out of assets of the respective Fund on an ongoing basis, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

PREMIUM/DISCOUNT INFORMATION

Information regarding how often Shares of the Funds traded on the Exchange at a price above (*i.e.*, at a premium) or below (*i.e.*, at a discount) the NAV of such Fund can be found on the Funds' website at www.yieldmaxetfs.com.

ADDITIONAL NOTICES

Shares are not sponsored, endorsed, or promoted by the Exchange. The Exchange is not responsible for, nor has it participated in the determination of, the timing, prices, or quantities of Shares to be issued, nor in the determination or calculation of the equation by which Shares are redeemable. The Exchange has no obligation or liability to owners of Shares in connection with the administration, marketing, or trading of Shares.

Without limiting any of the foregoing, in no event shall the Exchange have any liability for any lost profits or indirect, punitive, special, or consequential damages even if notified of the possibility thereof.

The Adviser, ZEGA, Lucania, Level and the Funds make no representation or warranty, express or implied, to the owners of Shares or any member of the public regarding the advisability of investing in securities generally or in any Fund particularly.

The Third Amended and Restated Declaration of Trust ("Declaration of Trust") provides a detailed process for the bringing of derivative or direct actions by shareholders in order to permit legitimate inquiries and claims while avoiding the time, expense, distraction, and other harm that can be caused to a Fund or its shareholders as a result of spurious shareholder demands and derivative actions. Prior to bringing a derivative action, a demand by three unrelated shareholders must first be made on a Fund's Trustees. The Declaration of Trust details various information, certifications, undertakings and acknowledgments that must be included in the demand. Following receipt of the demand, the trustees have a period of 90 days, which may be extended by an additional 60 days, to consider the demand. If a majority of the Trustees who are considered independent for the purposes of considering the demand determine that maintaining the suit would not be in the best interests of the Fund, the Trustees are required to reject the demand and the complaining shareholders may not proceed with the derivative action unless the shareholders are able to sustain the burden of proof to a court that the decision of the Trustees not to pursue the requested action was not a good faith exercise of their business judgment on behalf of the Fund. The Declaration of Trust further provides that shareholders owning Shares representing no less than a majority of a Fund's outstanding shares must join in bringing the derivative action. If a demand is rejected, the complaining shareholders will be responsible for the costs and expenses (including attorneys' fees) incurred by the Fund in connection with the consideration of the demand, if a court determines

that the demand was made without reasonable cause or for an improper purpose. If a derivative action is brought in violation of the Declaration of Trust, the shareholders bringing the action may be responsible for the Fund's costs, including attorneys' fees, if a court determines that the action was brought without reasonable cause or for an improper purpose. The Declaration of Trust provides that no shareholder may bring a direct action claiming injury as a shareholder of the Trust, or any Fund, where the matters alleged (if true) would give rise to a claim by the Trust or by the Trust on behalf of a Fund, unless the shareholder has suffered an injury distinct from that suffered by the shareholders of the Trust, or the Fund, generally. Under the Declaration of Trust, a shareholder bringing a direct claim must be a shareholder of the Fund with respect to which the direct action is brought at the time of the injury complained of or have acquired the shares afterwards by operation of law from a person who was a shareholder at that time. The Declaration of Trust further provides that a Fund shall be responsible for payment of attorneys' fees and legal expenses incurred by a complaining shareholder only if required by law, and any attorneys' fees that the Fund is obligated to pay shall be calculated using reasonable hourly rates. These provisions do not apply to claims brought under the federal securities laws.

The Declaration of Trust also requires that actions by shareholders against a Fund be brought exclusively in a federal or state court located within the State of Delaware. This provision will not apply to claims brought under the federal securities laws. Limiting shareholders' ability to bring actions only in courts located in Delaware may cause shareholders economic hardship to litigate the action in those courts, including paying for traveling expenses of witnesses and counsel, requiring retaining local counsel, and may limit shareholders' ability to bring a claim in a judicial forum that shareholders find favorable for disputes, which may discourage such actions.

UNDERLYING ISSUER INFORMATION

Information provided to or filed with the SEC by each of Apple Inc., Coinbase Global, Inc., Nvidia Corporation, and Tesla, Inc. pursuant to the Exchange Act, including the financial statements of each such Underlying Issuer in its Form 10-K, can be located by reference to the SEC file number noted below through the SEC's website at www.sec.gov:

Underlying Issuer	SEC File Number
Apple Inc.	001-36743
Coinbase Global, Inc.	001-40289
Nvidia Corporation	000-23985
Tesla, Inc.	001-34756

You can find ARKK's prospectus and other information about the ETF, including the most recent reports to shareholders, online by reference to the Investment Company Act File No. 811-22883 through the SEC's website at www.sec.gov.

FINANCIAL HIGHLIGHTS

The Financial Highlights table is intended to help you understand the Fund's financial performance for the Fund's periods shown. Certain information reflects financial results for a single Fund share. The total return in the table represents the rate that an investor would have earned or lost on an investment in the Fund (assuming reinvestment of all dividends and distributions). This information has been audited by Cohen & Company, Ltd., the Fund's independent registered public accounting firm, whose report, along with the Fund's financial statements, is included in the Fund's Annual Certified Shareholder Report, which is available upon request.

As of the date of this Prospectus, the YieldMax™ Short Innovation Option Income Strategy ETF and YieldMax™ Short AAPL Option Income Strategy ETF had not commenced operations, therefore, Financial Highlights for those Funds are not shown.

SUMMARY INFORMATION

YieldMax™ Innovation Option Income Strategy ETF - FUND SUMMARY

Investment Objective

The Fund's primary investment objective is to seek current income. The Fund's secondary investment objective is to seek exposure to the share price of the ARK Innovation ETF ("ARKK" or "Underlying Security"), subject to a limit on potential investment gains.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.99%
Distribution and Service (12b-1) Fees	None
Other Expenses (includes dividend, tax and broker expense)	0.01%
Total Annual Fund Operating Expenses	1.00%

(1) The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), and litigation expenses and other non-routine or extraordinary expenses.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem or hold all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$102	\$318	\$552	\$1,225

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 64% of the average value of its portfolio.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks current income while providing indirect exposure to the share price (*i.e.*, the price returns) of ARKK (NYSE Arca: ARKK) ("ARKK" or the "Underlying Security"), subject to a limit on potential investment gains. The Fund will employ its investment strategy as it relates to ARKK regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods. As further described below, the Fund uses either a synthetic covered call strategy or a synthetic covered call spread strategy to provide income and indirect exposure to the share price returns of ARKK, subject to a limit on potential investment gains as a result of the nature of the options strategy it employs. That is, the Fund not only seeks to generate income from its options investments but also aims to derive gains when the value of ARKK increases. The Fund's options contracts provide:

- indirect exposure to the share price returns of ARKK,
- current income from the option premiums, and
- a limit on the Fund's participation in gains, if any, of the share price returns of ARKK.

For more information, see sections “The Fund’s Use of Underlying Security Option Contracts,” “Synthetic Covered Call Strategy” and “Synthetic Covered Call Spread Strategy” below.

Why invest in the Fund?

- The Fund seeks to generate monthly income, which is not dependent on the price appreciation of the Underlying Security.
- The Fund seeks to participate in a portion of the gains experienced by the Underlying Security.

That is, although the Fund may not fully participate in gains in the Underlying Security’s stock price, the Fund’s portfolio is designed to generate income.

An Investment in the Fund is not an investment in the Underlying Security.

- **The Fund’s strategy will capture only a portion of its potential gains if the Underlying Security’s stock price increase in value.**
- **The Fund’s strategy is subject to all potential losses if the Underlying Security’s stock price decrease in value, which may not be offset by income received by the Fund.**
- The Fund does not invest directly in the Underlying Security.
- Fund shareholders are not entitled to any Underlying Security dividends.

Additional information regarding the Underlying Security is also set forth below.

The Fund’s Use of Underlying Security Option Contracts

As part of the Fund’s synthetic covered call strategy and synthetic covered call spread strategy, the Fund will purchase and sell a combination of standardized exchange-traded and FLEXible EXchange® (“FLEX”) call and put option contracts that are based on the value of the price returns of the Underlying Security.

- In general, an option contract gives the purchaser of the option contract the right to purchase (for a call option) or sell (for a put option) the underlying asset (like shares of the Underlying Security) at a specified price (the “strike price”).
- If exercised, an option contract obligates the seller to deliver shares (for a sold or “short” call) or buy shares (for a sold or “short” put) of the underlying asset at a specified price (the “strike price”).
- Options contracts must be exercised or traded to close within a specified time frame, or they expire. See the chart in section “Fund Portfolio” below for a description of the option contracts utilized by the Fund.

Standardized exchange-traded options include standardized terms. FLEX options are also exchange-traded, but they allow for customizable terms (e.g., the strike price can be negotiated). For more information on FLEX options, see “Additional Information about the Funds – Exchange Traded Options Portfolio.”

The Fund’s options contracts are based on the value of the Underlying Security, which gives the Fund the right or obligation to receive or deliver shares of the Underlying Security on the expiration date of the applicable option contract in exchange for the stated strike price, depending on whether the option contract is a call option or a put option, and whether the Fund purchases or sells the option contract.

Synthetic Covered Call Strategy

In seeking to achieve its investment objective, the Fund may implement a “*synthetic* covered call” strategy using the standardized exchange-traded and FLEX options described above.

- A *traditional* covered call strategy is an investment strategy where an investor (the Fund) sells a call option on an underlying security it owns.
- A *synthetic* covered call strategy is similar to a traditional covered call strategy in that the investor sells a call option that is based on the value of the underlying security. However, in a synthetic covered call strategy, the investor (the Fund) does not own the underlying security, but rather seeks to *synthetically* replicate 100% of the price movements of the underlying security through the use of various investment instruments.

The Fund's synthetic covered call strategies consists of the following three elements, each of which is described in greater detail farther below:

- Synthetic long exposure to the Underlying Security, which allows the Fund to seek to participate in the changes, up or down, in the price of shares of the Underlying Security.
- Covered call writing (where the Underlying Security's call options are sold against the synthetic long portion of the strategy), which allows the Fund to generate income.
- U.S. Treasuries, which are used for collateral for the options, and which also generate income.

1. Synthetic Long Exposure

To achieve a synthetic long exposure to the Underlying Security, the Fund will buy the Underlying Security's call options and, simultaneously, sell the Underlying Security's put options to try to replicate the price movements of the Underlying Security. The call options purchased by the Fund and the put options sold by the Fund will generally have one-month to six-month terms and strike prices that are approximately equal to the then-current share price of the Underlying Security at the time the contracts are purchased and sold, respectively. The combination of the long call options and sold put options provides the Fund with indirect investment exposure equal to approximately 100% of the Underlying Security for the duration of the applicable options exposure.

2. Covered Call Strategies

Covered Call Strategy

As part of its strategy, the Fund will write (sell) call option contracts on the Underlying Security to generate income. Since the Fund does not directly own the Underlying Security, these written call options will be sold short (i.e., selling a position it does not currently own). The Fund will seek to participate in the share price appreciation of the Underlying Security, if any. However, due to the nature of covered call strategies, the Fund's participation may be subject to a cap (as described below). In this strategy, the call options written (sold) by the Fund will generally have 1- month or less expiration dates (the "Call Period") and generally have a strike price that is approximately 0%-15% above the then-current share price of the Underlying Security.

It is important to note that the sale of the Underlying Security call option contracts will limit the Fund's participation in the appreciation in the Underlying Security's stock price. If the stock price of the Underlying Security increases, the above-referenced synthetic long exposure alone would allow the Fund to experience similar percentage gains. However, if the Underlying Security's stock price appreciates beyond the strike price of one or more of the sold (short) call option contracts, the Fund will lose money on those short call positions, and the losses will, in turn, limit the upside return of the Fund's synthetic long exposure. As a result, the Fund's overall strategy (i.e., the combination of the synthetic long exposure to the Underlying Security and the sold (short) the Underlying Security call positions) will limit the Fund's participation in gains in the Underlying Security's stock price beyond a certain point.

Covered Call Spread Strategy

The Adviser will employ the Covered Call Spread Strategy when it believes it is a better strategy for the Fund as compared to the Covered Call Strategy. The Fund may write (sell) credit call spreads (described below) rather than stand-alone call option contracts to seek greater participation in the potential appreciation of its Underlying Security's share price, while still generating net premium income. The Adviser will primarily employ this covered call spread strategy when it believes that the share price of its Underlying Security is likely to rise significantly in the short term (e.g., following a substantial selloff or overall positive market news). Additionally, the Adviser may use this strategy in other scenarios (e.g., if the market is undervaluing further out-of-the-money options relative to near-the-money options), where it believes the use of credit call spreads may prove more advantageous to the Fund's total return than the covered call strategy.

A credit call spread involves selling a call option while simultaneously buying a call option with a higher strike price, both with the same expiration date. By writing credit call spreads, the Fund can potentially offset losses incurred from its short call positions if the Underlying Security's share price rises above the strike price.

3. U.S. Treasuries

The Fund will hold short-term U.S. Treasury securities as collateral in connection with the Fund's synthetic covered call strategy.

The Fund intends to continuously maintain indirect exposure to the Underlying Security through the use of options contracts. As the options contracts it holds are exercised or expire it may enter into new options contracts, a practice referred to as "rolling." The Fund's practice of rolling options may result in high portfolio turnover.

Fund's Monthly Distributions

The Fund will seek to provide monthly income in the form of cash distributions. The Fund will seek to generate such income in the following ways:

- Writing (selling) call option contracts on its Underlying Security as described above. The income comes mainly from the option premiums received from these option sales. A premium, in this context, refers to the price the option buyer pays to the option seller (the Fund) for the rights granted by the option. The amount of these premiums is largely affected by the fluctuations in the Underlying Security's stock prices. However, other elements like interest rates can also influence the income level.
- Investing in short-term U.S. Treasury securities. The income generated by these securities will be influenced by interest rates at the time of investment.
- In addition to the income-seeking methodologies stated in the Prospectus, the Fund's use of the Synthetic Covered Call Spread Strategy may occasionally allow it to capture a substantial portion of any significant increase in the price of its Underlying Security. When this happens, the Fund could receive profits exceeding the initial cost of the call options, and the Fund's distributions may include some of those profits.

Fund's Return Profile vs its Underlying Security

For the reasons stated above, the Fund's performance will differ from that of the Underlying Security's stock price. The performance differences will depend on, among other things, the price of the Underlying Security, changes in the value of the the Underlying Security options contracts the Fund holds, and changes in the value of the U.S. Treasuries.

Fund Portfolio

Principal Holdings		
Portfolio Holdings (All options are based on the value of the Underlying Security)	Investment Terms	Expected Target Maturity
Purchased call option contracts	<p>"at-the-money" (i.e., the strike price is equal to the then-current share price of the Underlying Security at the time of purchase) to provide indirect exposure to positive price returns of the Underlying Security.</p> <p>If the Underlying Security share price increases, these options will generate corresponding increases to the Fund.</p>	1-month to 6-month expiration dates
Sold put option contracts	<p>"at-the-money" (i.e., the strike price is equal to the then-current share price of the Underlying Security at the time of sale).</p> <p>They are sold to help pay for the purchased call options described above.</p> <p>However, the sold put option contracts provide exposure to the full extent of any share price losses experienced by the Underlying Security.</p>	1-month to 6-month expiration dates
Sold (short) call option contracts (Covered Call Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Underlying Security at the time of sale.</p> <p>They generate current income. However, they also limit some potential positive returns that the Fund may have otherwise experienced from gains in the Underlying Security's share price.</p>	1-month or less expiration dates
Sold (short) call option contracts (Covered Call Spread Strategy)	<p>The strike price is approximately 0%-15% more than the then-current share price of the Fund's Underlying Security at the time of sale.</p> <p>Sold call option contracts provide inverse exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security, minus the premium received.</p>	1-month or less expiration dates
Purchased call option contracts (Covered Call Spread Strategy)	<p>"out-of-the-money" (i.e., the strike price is above the strike price of the corresponding Covered Call Spread Strategy sold call).</p> <p>Bought call option contracts provide exposure to the full extent of any increases in the value experienced by the Fund's Underlying Security above the option's strike price.</p>	1-month or less expiration dates
U.S Treasury Securities and Cash	<p>Multiple series of U.S. Treasury Bills supported by the full faith and credit of the U.S. government.</p> <p>These instruments are used as collateral for the Fund's derivative investments.</p> <p>They will also generate income.</p>	6-month to 2-year maturities

The market value of the cash and treasuries held by the Fund is expected to be between 50% and 100% of the Fund's net assets and the market value of the options package is expected to be between 0% and 50% of the Fund's net assets. In terms of notional value, the combination of these investment instruments provides indirect investment exposure to ARKK equal to at least 100% of the Fund's total assets.

The Fund is classified as "non-diversified" under the 1940 Act.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in securities and financial instruments that provide indirect exposure to ARKK.

There is no guarantee that the Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

ARKK

ARKK's investment objective is long-term growth of capital. ARKK is an actively-managed ETF that invests under normal circumstances primarily (at least 65% of its assets) in domestic and foreign equity securities of companies that are relevant to the Fund's investment theme of disruptive innovation. ARKK's investment adviser defines "disruptive innovation" as the introduction of a technologically enabled new product or service that potentially changes the way the world works. ARKK's investment adviser believes that companies relevant to this theme are those that rely on or benefit from the development of new products or services, technological improvements and advancements in scientific research relating to the areas of genomics (which ARKK's adviser defines as "the study of genes and their functions, and related techniques, e.g., genomic sequencing); innovation in automation and manufacturing, transportation, energy, artificial intelligence and materials; the increased use of shared technology, infrastructure and services; and technologies that make financial services more efficient.
